ABSTRACT: Drishti is a wireless pedestrian navigation system. It integrates several technologies including wearable computers, voice recognition and synthesis, wireless networks, Geographic Information System (GIS) and Global positioning system (GPS). Drishti augments contextual information to the visually impaired and computes optimized routes based on user preference, temporal constraints (e.g., traffic congestion), and dynamic obstacles (e.g., ongoing ground work, road blockade for special events). The system constantly guides the blind user to navigate based on static and dynamic data. Environmental conditions and landmark information queried from a spatial database along their route are provided on-the-fly through detailed explanatory voice cues. The system also provides capability for the user to add intelligence, as perceived by the blind user, to the central server hosting the spatial database. Drishti is supplementary to other navigational aids such as canes, guide dogs and wheelchairs.

Papers from a January 2002 conference are organized into four sessions each on low power design, synthesis, testing, layout, and interconnects and technology, as well as two sessions each on embedded systems, verification, and VLSI architecture, one session on analog design, and one session on hot c

DRISHTI is a wireless indoor orientation system specifically designed for the Visually Impaired (VI), that continuously and in real-time can determine the position of a person from a distance within a confined physical space. We use it to help a VI move around in an unknown and unfamiliar indoor environment (which means that the VI is not oriented, making DRISHTI unique from other Electronic Travel Aids), providing him with the relevant contextual information. DRISHTI does not require any kind of navigational aids like guide canes, guide dogs or wheel chairs to help the VI. The system constantly guides the VI to navigate through auditory cues, issued by the system, based on static and dynamic data collected by the obstacle avoidance system. In this text we integrate several technologies including wearable computers, RFID networks, wireless sensors, voice recognition and synthesis and Bluetooth Technology. The underlying wireless network can either be of RFID tags or Wireless Sensors.

Fictional autobiography of an Indian blind civil servant.

This book is an effort at creating a collaborative platform for experts and key stakeholders to share their expertise and experiences with successful practices at

ABSTRACT: Drishti is an integrated indoor/outdoor navigation system for the visually impaired people. It uses precise position measurement system, wireless connection, wearable computer, and vocal communication interface to guide user with much travel independency and safety. In the outdoor environment, Drishti uses DGPS as the location system to keep the user as close as possible to the central line of sidewalks and provides the user optimal route with dynamically routing and rerouting ability. The user can switch the system from outdoor to indoor environment by giving a simple vocal command. An ultrasound location system called "Hexamite" is exploited for very precise indoor location measurement. The user can require the indoor facility layout. His/her location is compared with the spatial database of the "smart house" to compute the relation between the user and the indoor facilities. Travel prompts can be given to the user about the possible obstacles around to avoid injury. Drishti can also provide the user with step by step walking guidance. The indoor service of Drishti is bundled under the OSGI framework to make it available for other services simultaneously. PROJECT GBA&C

recognizes and celebrates the accomplishments of world's renowned artists who have made, and are making, significant contributions in the field of art, producing powerful imagery that continues to captivate, educate, inspire and heal humanity. Engaging art with books " ART EXHIBIT " is one such initiative showcasing the best moments captured by artists across the globe, encapsulating the sheer joy of subtle self-expression behind every art. Editors Panel - PROJECT GBA&C This fully-illustrated New York Times bestseller categorizes an astonishing 2,100 yoga poses through photographs and descriptions for optimal benefit including adaptations for all levels of expertise and ages. A thoughtful, inspiring, meticulously-crafted guide to the practice of yoga, 2,100 Asanas will explore hundreds of familiar poses along with modified versions designed to bring more healthful options to yogis of all experience and ability. Organized into eight sections for the major types of poses -- standing, seated, core, quadruped, inversions, prone, supine and backbends -- and each section gently progresses from easy to more challenging. Each pose is accompanied by the name of the pose in English and Sanskrit, the Drishti point (eye gaze),

the chakras affected and primary benefits.
