

Driver Theory Test 5th Edition

The Third Edition of North Carolina Law of Torts covers every aspect of North Carolina tort law. Part I covers intentional torts and defenses; Part II is devoted to negligence and defenses; Part III discusses strict liability and defenses; and Part IV covers a variety of other torts overlapping these categories. "Scope Notes" at the start of each chapter describe the subjects covered and refer to related issues in other chapters for easy cross-referencing. A Table of Cases and Table of Statutes help save you time and focus your research, while the index eases your search for specific areas of tort law.

Information Technology Project Management, 5th Edition

Performance Enhancement, Performance Inhibition, Individuals, and Teams

1972: January-June

This much-loved textbook explains the principles of electrical circuit theory and technology so that students of electrical and mechanical engineering can master the subject. Real-world situations and engineering examples put the theory into context. The inclusion of worked problems with solutions help you to learn and further problems then allow you to test and confirm you have fully understood each subject. In total the book contains 800 worked problems, 1000 further problems and 14 revision tests with answers online. This an ideal text for

foundation and undergraduate degree students and those on upper level vocational engineering courses, in particular electrical and mechanical. It provides a sound understanding of the knowledge required by technicians in fields such as electrical engineering, electronics and telecommunications. This edition has been updated with developments in key areas such as semiconductors, transistors, and fuel cells, along with brand new material on ABCD parameters and Fourier's Analysis. It is supported by a companion website that contains solutions to the 1000 questions in the practice exercises, formulae to help students answer the questions and information about the famous mathematicians and scientists mentioned in the book. Lecturers also have access to full solutions and the marking scheme for the 14 revision tests, lesson plans and illustrations from the book.

The number of women entrepreneurs is growing rapidly worldwide, however, women are still less likely than men to start a new business. Two factors influencing this are barriers and drivers, however, the understanding of how their interaction affects women's entrepreneurial intention, specifically across different contexts, is lacking. This study focuses on entrepreneurial intention of women across four different European countries, by adopting both a national and supranational perspective. The analysis is based on the Global Entrepreneurship Monitor (GEM) Germany, Poland, Spain, and Sweden 2015 database. Overall the thesis contributes to the literature of entrepreneurship and context and also the understanding of factors influencing women entrepreneurship in Europe.

Concise, contemporary, and accessible to students with little-to-no prior knowledge of nursing theory, *Theoretical Basis for Nursing, 6th Edition*, clarifies the application of theory and helps students become more confident, well-rounded nurses. With balanced coverage of grand, middle range, and shared theories, this acclaimed, AJN Award-winning text is extensively researched and easy to read, providing an engaging, approachable guide to developing, analyzing, and evaluating theory in students' nursing careers. Updated content reflects the latest perspectives on clinical judgment, evidence-based practice, and situation-specific theories, accompanied by engaging resources that give students the confidence to apply concepts to their own practice.

"The Handbook is designed for scholars and psychology professionals interested in intelligence, cognitive abilities, educational testing and measurement, reasoning, and problem solving. It can also be used by advanced undergraduate and graduate students studying intelligence or the psychology of individual differences. In addition, the Handbook will be a welcome addition to any academic library."--BOOK JACKET.

"The book goes well beyond the information in undergraduate texts and provides stimulating and useful coverage of key topics in biopsychosocial aging. Psychology is not prepared for the future growth of our older adult population, and I suggest Psychology of Aging: A Biopsychosocial Perspective as required reading for students" --William E. Haley, PhD; Professor; School of Aging Studies; College of Behavioral and Community Sciences, Tampa, FL

"This book distinguishes itself from previous publications on the topic with a thorough review of the history profession of geropsychology and its timely inclusion of chapters on brain imaging techniques and the aging brain, cultural differences in aging ethnic and sexual minorities, cognitive interventions, and more. This book is a must read for undergraduate and graduate students studying aging, and one I will definitely recommend to students new to the area."--Sherry A. Beaudreau, Ph.D., ABPP, VA Palo Alto Health Care System and Stanford University School of Medicine

"Brian Yochim and Erin Woodhead have created an invaluable tool for learning about and teaching geropsychology...This book will serve as a seminal text in training psychologists, social workers, and many other disciplines in the psychology of aging." --Erin E. Emery-Tiburcio, Ph.D., ABPP, Rush University, Chicago, IL The only graduate text to encompass the full range of issues regarding the psychology of aging This is the first graduate-level text that offers a comprehensive, in-depth chronicle of issues surrounding the psychology of aging emphasizing psychology, with a foundation in the biology, and an expansion into the sociological aspects of aging. The text is divided into three sections: biological underpinnings of aging, psychological components of aging, and social aspects of aging. Among the multitude of topics addressed are biological theories of aging, neuroimaging methods in aging research, neuroplasticity, cognitive reserve and cognitive interventions, a detailed overview of neurocognitive disorders in aging such as Alzheimer's disease and Lewy body disease, relationships in aging, work vs. retirement, cultural issues in aging, and aging and the legal system, to name just a few critical topics. With an emphasis on promoting critical thinking, the text is enriched with discussion questions in each chapter along with suggestions for more in-depth readings. In addition it includes chapter PowerPoints and an Instructor's Manual with sample syllabi for a 10-week course and a 15-week course. Written for graduate students in multiple gerontology-related disciplines, the text is also of value to individuals studying nursing, medicine, social work, biology, and occupational, physical, and speech therapies. Key Features: Addresses the biological underpinnings of aging, psychological components, and social aspects Written by a variety of experts on each area Emphasizes critical thinking throughout the text Presents discussion questions in each chapter Includes PowerPoints and an Instructor's Manual with sample syllabi Tailored to graduate students from multiple disciplines embarking on clinical or research careers involving older adults.

This book will help teach students how to diagnose, conduct treatment planning, and evaluate client outcomes. Addressing specific competencies as identified by CACREP (as all books in the series) the book will: provide the reader with foundational knowledge for sound formal and informal assessments; review ethical and legal considerations in assessment; introduce basic statistical concepts; highlight the domains in which assessments are commonly used (intelligence, aptitude, achievement, personality, career, etc.); and describe strategies to integrate assessment data when working with clients.

Within an expanding field of study in both undergraduate and graduate nursing curricula, Caring for the Vulnerable explores vulnerability from the perspective of individuals, groups, communities and populations, and addresses the implication of that vulnerability for nurses, nursing, and nursing care. Originally published between 1973 and 1993 the 14 books in this set discuss a number of themes such as: policy, practice and evaluation in schools; dealing with disruptive behaviour; issues regarding the teaching of arts and sciences; ethnographic studies of life in primary and secondary schools and critical events in teaching and learning.

Human Performance provides the student and researcher with a comprehensive and accessible review of performance, in the real world and essential cognitive science theory. Four main sections cover both theoretical and practical issues: Section One outlines the perspectives on performance offered by contemporary cognitive science, including information processing and neuroscience perspectives. Section Two presents a multi-level view of the performer as biological organism, information-processor and intentional agent. It reviews the development of the cognitive theory of performance through experimental studies and also looks at practical issues such as human error. Section Three reviews the impact of stress factors such as noise, fatigue and illness on performance. Section Four assesses individual and group differences in performance with accounts of ability, personality and aging.

The 5th Edition of Jack Marchewka's Information Technology Project Management focuses on how to create measurable organizational value (MOV) through IT projects. The author uses the concept of MOV, combined with his own research, to create a solid foundation for making decisions throughout the project's lifecycle. The book's integration of project management and IT concepts provides students with the tools and techniques they need to develop in this field.

Transport managers perform an essential and rewarding function in society, controlling the infrastructure that allows people and goods to move around conveniently and swiftly. However, it is also highly demanding work.

Engine Testing: Electrical, Hybrid, IC Engine and Power Storage Testing and Test Facilities, Fifth Edition covers the requirements of test facilities dealing with e-vehicle systems and different configurations and operations. Chapters dealing with the rigging and operation of Units Under Test (UUT) are updated to include electric motor-based systems, test cell services and thermo-dynamics. Control module and system testing using advanced, in-the-Loop (XiL) methods are described, including

powertrain component integrated simulation and testing. All other chapters dealing with test cell design, installation, safety and use together with the cell support systems in IC engine testing are updated to reflect current developments and research. Covers multiple technical disciplines for anyone required to design, modify or operate an automotive powertrain test facility Provides tactics on the development of electrical and hybrid powertrains and energy storage systems Presents coverage of the housing and testing of automotive battery systems in addition to the use of 'virtual' testing in the form of "x-in-the-loop' throughout the powertrain's development and test life

Doing Science is unique in seeking to make explicit the links between science education and science studies. These fields of study and their respective academic communities, whilst appearing to have many potential points of contact, remain surprisingly separate, with little apparent recognition of the relevance to the interests of each of the work done within the other tradition. Presenting detailed accounts of current research, the book highlights the significance of modern science studies for classroom practice and, conversely, the importance of the classroom and teaching laboratory as a context for science studies. The thread which runs through the collection as a whole is children's experience of doing science and the image of science which learners pick up along with the science knowledge, understanding and skills they require.

This textbook presents real-world cases and discussions that introduce the various mental health syndromes found in the aging population before delving into the core concepts covered by geriatric psychiatry curricula. The text follows each case study with the vital information necessary for physicians in training, including key features of each disorder and its presentation, practical guidelines for diagnosis and treatment, clinical pearls, and other devices that are essential to students of geriatric psychiatry. With the latest DSM-5 guidelines and with rich learning tools that include key points, review questions, tables, and illustrations, this text is the only resource that is specifically designed to train both American and Canadian candidates for specialty and subspecialty certification or recertification in geriatric psychiatry. It will also appeal to audiences worldwide as a state-of-the-art resource for credentialing and/or practice guidance. The text meets the needs of the future head on with its straightforward coverage of the most frequently encountered challenges, including neuropsychiatric syndromes, psychopharmacology, eldercare and the law, substance misuse, mental health following a physical condition, medical psychiatry, and palliative care. Written by experts in the field, Geriatric Psychiatry: A Case-Based Textbook is the ultimate resource for graduate and undergraduate medical students and certificate candidates providing mental health care for aging adults, including psychiatrists, psychologists, geriatricians, primary care and family practice doctors, neurologists, social workers, nurses, and others.

This new official DSA book is specifically designed to help bus and coach drivers prepare for their initial Certificate of Professional Competence (CPC) by focusing on the syllabus of the two new modules - case studies and the practical demonstration test. The CPC is a new qualification that all professional bus and coach drivers will need to hold in addition to their vocational driving licence. Its aim for the Driver CPC is to improve the knowledge and skills of PCV drivers and also to ensure these skills are developed throughout their working life. This book is also essential reading for all learner PCV (Passenger Carrying Vehicle) drivers.

This book addresses the problem of treating interior responses of complex electronic enclosures or systems, and presents a probabilistic approach. Relationships for determining the statistics of the driving fields to apply to a circuit analysis code representing part of an enclosed system's wiring are worked out. Also addressed are limited spatial and frequency coherence essential to a statistically based field drive model. This text gives examples, different modeling, and describes how to make, interchange, and optimize models.

ETHICS: A PLURALISTIC APPROACH TO MORAL THEORY, FIFTH EDITION provides

a comprehensive yet clear introduction to the main traditions in ethical thought, including virtue ethics, utilitarianism, and deontology. Additionally, the book presents a conceptual framework of ethical pluralism to help students understand the relationship among various theories. Lawrence Hinman, one of today's most respected and accomplished educators in ethics and philosophy education, presents a text that gives students plentiful opportunities to explore ethical theory and their own responses to them, using fascinating features such as the Ethical Inventory sections that appear at the beginning and the end of the text. End-of-chapter discussion questions, and the use of current issues and movies help students retain what they've

learned and truly comprehend the subject matter. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

A fusion of the full-length and briefer versions that preceded it, Weiten's *PSYCHOLOGY: THEMES AND VARIATIONS*, 11th Edition combines a superb thematic organization with practical applications and examples that help readers see beyond research to big-picture concepts. Often described as challenging yet easy to learn from, the book surveys psychology's broad range of content while illuminating the process of research and its relationship to application, showing both the unity and diversity of psychology's subject matter and helping learners master the basic concepts and principles of psychology with as little struggle as possible. Weiten's themes provide unifying threads across chapters that help readers to see the connections among different research areas in psychology. A dynamic illustration program further enhances these themes. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Sport Psychology, 2nd Edition provides a synthesis of the major topics in sport psychology with an applied focus and an emphasis on achieving optimal performance. After exploring the history of sport psychology, human motivation, and the role of exercise, there are three main sections to the text: Performance Enhancement, Performance Inhibition, and Individuals and Teams. The first of these sections covers topics such as anxiety, routines, mental imagery, self-talk, enhancing concentration, relaxation, goals, and self-confidence. The section on Performance Inhibition includes chapters on choking under pressure, self-handicapping, procrastination, perfectionism, helplessness, substance abuse, and disruptive personality factors. While much of the information presented is universally applicable, individual differences based on gender, ethnicity, age, and motivation are emphasized in the concluding section on Individuals and Teams. Throughout, there are case studies of well-known athletes from a variety of sports to illustrate topics that are being explored.
