

### Eagle Point 2007

*After a strange and alarming phone call from her elderly uncle Pete gets abruptly cut off, kindergarten teacher Betsy McGovern returns to her hometown of Eagle Point, Maine. She soon learns that her beloved uncle Pete and godmother, Lily Mae Warren, the lighthouse keeper of Eagle Point Light, have been kidnapped. Eagle Point sheriff Francis Willette helps Betsy unravel the puzzling family secrets and shocking local murders that welcome her home. Betsy and the handsome sheriff sort out the clues to the case while they sort out the feelings they have for each other. Betsy also has to keep Eagle Point Light burning. Watching her back might not be a bad idea, either. With two dead bodies and no solid suspects, Betsy and Francis frantically work to solve the case and bring Betsy's loved ones home before they become the final victims in an elaborate scheme to keep past secrets hidden.*

This is the engaging true story of kids competing in the high-stakes, high-drama world of international science fairs. Every year the Intel International Science & Engineering Fair brings together 1,500 high schoolers from more than 50 countries to compete for over \$4 million dollars in prizes and scholarships. These amazing kids are doing everything from creating bionic prosthetics to conducting groundbreaking stem cell research, from training drug-sniffing cockroaches to building a nuclear reactor. In Science Fair Season, Judy Dutton follows twelve teens looking for science fair greatness and tells the gripping stories of their road to the big competition. Some will win, some will lose, but all of their lives are changed forever. The Intel International Science & Engineering Fair is the most prominent science fair in the country, and it takes a special blend of drive, heart, and smarts to win there. Dutton goes inside the inner sanctum of science fair competitions and reveals the awe-inspiring projects and the competitors there. Each of the kids--ranging from a young Erin Brokovich who made the FBI watch list for taking on a big corporation, to a quietly driven boy who lives in a run-down trailer on a Navajo reservation, to a wealthy Connecticut girl who dreams of being an actress and finds her calling studying bees, to a troubled teenager in a juvenile detention facility, to the next Bill Gates--take readers on an unforgettable journey. Along the way, Science Fair Season gives readers a glimpse of America's brightest young minds and shows how our country is still a place for inventors and dreamers--the "geeks" our future depends upon.

In the wake of the Fukushima Daiichi nuclear power plant accident, questions are being raised about the future of the uranium market, including as regards the number of reactors expected to be built in the coming years, the amount of uranium required to meet forward demand, the adequacy of identified uranium resources to meet that demand and the ability of the sector to meet reactor requirements in a challenging investment climate. This 24th edition of the "Red Book", a recognised world reference on uranium jointly prepared by the OECD Nuclear Energy Agency and the International Atomic Energy Agency, provides analyses and information from 42 producing and consuming countries in order to address these and other questions. It offers a comprehensive review of world uranium supply and demand as well as data on global uranium exploration, resources, production and reactor-related requirements. It also provides substantive new information on established uranium production centres around the world and in countries developing production centres for the first time. Projections of nuclear generating capacity and reactor-related requirements through 2035, incorporating policy changes following the Fukushima accident, are also featured, along with an analysis of long-term uranium supply and demand issues
