Results from the National Research Council's (NRC) landmark study Diet and health are readily accessible to nonscientists in this friendly, easy-to-read guide. Readers will find the heart of the book in the first chapter: the Food and Nutrition Board's nine-point dietary plan to reduce the risk

of diet-related chronic illness. The nine points are presented as sensible guidelines that are easy to follow on a daily basis, without complicated measuring or calculating--and without sacrificing favorite foods. Eat for Life gives practical recommendations on foods to eat and in a "how-to" section provides tips on shopping (how to read food labels), cooking (how to turn a high-fat dish into a low-fat one), and eating out (how to read a menu with nutrition in mind). The volume explains what protein, fiber, cholesterol, and fats are and what foods contain them, and tells readers how to reduce their risk of chronic

truth about a fish that is not as good for you as you have been told. A decade ago, farmed Atlantic salmon replaced tuna as the most popular fish on North America's dinner tables. We are told salmon is healthy and environmentally friendly. The reality is disturbingly different. In Salmon Wars, investigative journalists Douglas Frantz and Catherine Collins bring readers to massive ocean feedlots where millions of salmon are crammed into parasite-plagued cages and fed a chemical-laced diet. The authors reveal the conditions inside hatcheries, where young salmon are treated like garbage, and at the farms that

threaten our fragile coasts. They draw colorful portraits of characters, such as the big salmon farmer who poisoned his own backyard, the fly-fishing activist who risked everything to ban salmon farms in Puget Sound, and the American researcher driven out of Norway for raising the alarm about dangerous contaminants in the fish. Frantz and Collins document how the industrialization of Atlantic salmon threatens this keystone species, endangers our health and environment, and lines the pockets of our generation's version of Big Tobacco. And they show how it doesn't need to be this way. Just as

Most marketing and branding books fall into one of two camps: either they are about leaders or they assume that brands can be managed by process alone. The Pirate Inside is different. It forwards the idea that brands are about people, and Challenger Brands are driven by a certain kind of person in a certain kind of way.

Challenger Brands don't rely on CEOs or founders, but on the people within the organization whose personal qualities and

approach to what they do make the difference between whether the brand turns to gold or falls to dust. In line with this thinking, The Pirate Inside forwards two key questions: what does it take to be the driver or guardian of a successful Challenger Brand, and what are the demands made by this on character and corporate culture? Building on his answers, Adam Morgan then explores the critical issue of whether big, multi-brand companies can create Challenger micro-climates within their companies, and the benefits that they might achieve by doing so. food when eating with one other person, and 75 percent more when dining with three? How do we explain the fact that people who like strong coffee drink more of it under bright lighting? And why does green ketchup just not work? The answer is gastrophysics, the new area of sensory science pioneered by Oxford professor Charles Spence. Now he's stepping out of his lab to lift the lid on the entire eating experience—how the taste, the aroma, and our overall enjoyment of food are influenced by all of our senses, as

well as by our mood and expectations. The pleasures of food lie mostly in the mind, not in the mouth. Get that straight and you can start to understand what really makes food enjoyable, stimulating, and, most important, memorable. Spence reveals in amusing detail the importance of all the "off the plate" elements of a meal: the weight of cutlery, the color of the plate, the background music, and much more. Whether we're dining alone or at a dinner party, on a plane or in front of the TV, he reveals how to understand what

eat, and how, and why.” —Sam Sifton, The New York Times Book Review Acclaimed author of American Catch and The Omega Principle and life-long fisherman, Paul Greenberg takes us on a journey, examining the four fish that dominate our menus: salmon, sea bass, cod, and tuna. Investigating the forces that get fish to our dinner tables, Greenberg reveals our damaged relationship with the ocean and its inhabitants. Just three decades ago, nearly everything we ate from the sea was wild.

Today, rampant overfishing and an unprecedented biotech revolution have brought us to a point where wild and farmed fish occupy equal parts of a complex marketplace. Four Fish offers a way for us to move toward a future in which healthy and sustainable seafood is the rule rather than the exception.

are you? You appear to be an egg. You are an egg sinking. For many days, you sink. You sink a mile down, and you keep sinking down... down... until..." The unidentified narrator follows one krill among billions as it pursues its brief existence, eating and eating while metamorphosing from one thing into another and trying to avoid being eaten. Questions and advice are hurled at the krill on every page, but the krill never responds—because, after all, krill can't talk, and this is nonfiction. Krill are the largest animals able to catch and eat phytoplankton, and they in turn are eaten by the largest animals ever to live on earth—blue whales—as well as by seals, penguins, and a host of others. In other words, krill are really good at eating, and they make really good eating. And

that makes them the most important animals in the high-latitude oceans. As in *The Whale Fall Café*, Dan Tavis's illustrations combine scientific accuracy with Nemo liveliness and humor. Our star krill is so good at gobbling up phytoplankton that he turns green, so we can pick him out from the crowd racing to escape a penguin's beak or a blue whale's gaping maw. The book has been reviewed and endorsed by global krill expert Dr. Stephen Nicol, and the manuscript earned an honorable mention in Minnesota's McKnight Artist Fellowships for Writers. Helpful backmatter is included. The *Good Eating* manuscript won an honorable mention in Minnesota's McKnight Artist Fellowships for Writers. Technical review and endorsement from Dr.

Stephen Nichol, adjunct professor at the University of Tasmania and author of *The Curious Life of Krill*.

Breathtaking oil paintings bursting with energy pull readers along into Big Lake, the home of Jangles, the biggest fish anyone has seen. Fishing alone at dusk, a boy feels a tug on his line and comes face-to-face with the gigantic trout--whose enormous jaw is covered with so many lures and fish hooks that he jingles and jangles when he swims. Terrified by the sight, the boy is shocked when Jangles befriends him and takes him on an adventure to the bottom of the lake. A surprise ending will leave readers laughing and shaking their heads. Here is Shannon at his very best--a wild and witty story that begs repeated reading.

In the face of apocalyptic climate change, a former fisherman shares a bold and hopeful new vision for saving the planet: farming the ocean. Here Bren Smith--a restorative ocean farmer--introduces the world of sea-based agriculture, a groundbreaking solution to the global climate crisis. The ocean is a vast, untapped opportunity, home to thousands of edible plants. Using simple DIY techniques, we can grow more than enough delicious and nutritious food--without the use of fresh water or fertilizers--to feed planet and mitigate climate change, to boot. A groundbreaking "climate memoir," *Eat Like a Fish* interweaves Smith's own life--from sailing the high seas aboard commercial fishing trawlers to pioneering new forms

of ocean farming to surfing the frontiers of the food movement--with actionable food policy and practical advice on ocean farming. Written with the humor and swagger of a fisherman telling a late-night tale, it is a powerful story of environmental renewal, and a must-read guide to saving our oceans, feeding the world, and--by creating new jobs up and down the coasts--putting working class Americans back to work.

The author of *Sweet and Low* presents a historical profile of Samuel Zemurray that traces his rise from a penniless youth to one of the world's wealthiest and most powerful men, offering insight into his capitalist talents and the ways in which his life reflected the best and worst of American business dealings.

For millennia the great fish—marlin, bluefin tuna, and swordfish—have reigned over the world's oceans and awed human beings. Naturalists, photographers, sportfishermen, and writers from Zane Grey to Ernest Hemingway have been inspired by their beauty,

power, and sheer size. But like much other marine life today, these fish face perilous reductions in their populations due to destructive and illegal fishing, inept fisheries management practices, and dramatic changes in ocean ecology, including those wrought by climate change. In Pursuit of Giants is a moving elegy and a call to arms for the protection of these creatures, as well as a five-year, 75,000-mile global adventure story that takes author Matt Rigney on a quest to discover how once-thriving species are now threatened. Rigney's pilgrimage to encounter these giants takes him from the sportfishing mecca of Cabo San Lucas, to the Great Barrier Reef, from New Zealand to Nova Scotia, Japan and the Mediterranean,
