With the pace of trade and investment picking up, coupled with closer international cooperation with Beijing through the G20, FOCAC and BRICS grouping, South Africa-China ties are assuming a significant position in continental and even global affairs. At the same time, it is a relationship of paradoxes, breaking with many of the assumptions that underpin contemporary analyses of 'China-

Africa' ties. This edited volume examines the South Africa-China relationship through a survey of its diplomatic partnership, economic ties, and broader community relations. These important aspects that are often conflated as a single relationship, yet what is important to explore are how these components reflect different China-South Africa relationship(s), and how they intersect.

Sub-Saharan Africa is at a turning point. The barriers to economic growth seen in the 1980-2000 era are disappearing and new optimism is spreading. However, difficult goals of

eliminating poverty, achieving equity and overcoming environmental threats continue. This much-needed and insightful textbook has been written to help us understand this combination of emerging improvements and significant challenges. Opening with an analysis of the main theories relating to development in Sub-Saharan Africa, the book explores all the key issues, including: Human development; Rapid urbanization; Structural and gender dimensions; Sustainable development and environmental issues; and Africa's role in the world economy. The authors use

average incomes in both places. The situation in South Africa throws up an unconventional challenge. The country has symptoms of a spatial realm that is not not rural, not fully urban, lying somewhat in limbo. This is the realm of the country's townships and informal settlements (T&IS). In many ways, the townships and especially the informal settlements are similar to developing world slums, although never was a slum formed with as much central planning and purpose as were some of the larger South African townships. And yet, there is something distinct about the

T&IS. For one thing, unlike most urban slums, most T&IS are geographically distant from urban economic centers.

Exacerbated by the near absence of an affordable public transport system, this makes job seeking and other forms of economic integration prohibitively expensive. Motivated by their uniqueness and their special place in South African economic and social life, this study seeks to develop a systematic understanding of the structure of the township economy. What emerges is a rich information base on the migration patterns to T&IS, changes in their demographic profiles, their labor

market characteristics, and their access to public and financial services. The study then look closely at Diepsloot, a large township in the Johannesburg Metropolitan Area, to bring out more vividly the economic realities and choices of township residents. Given the current dichotomous urban structure, modernizing the township economy and enabling its convergence with the much richer urban centers has the potential to unleash significant productivity gains. Breaking out of the current low-level equilibrium however will require a comprehensive and holistic policy agenda, with significant

complementarities among the major policy reforms. While the study tells a rich and coherent story about development patterns in South African townships and points to some broad policy directions, its research and analysis will generally need to be deepened before being translated into direct policy action.

It also considers the ways in which South Africa, now that it is no longer a pariah state, has begun to position itself within the current global economy. Examining South Africa's land and agriculture, mining and minerals, manufacturing, tourism, corporate finance, the labour market and transport, the volume discusses the challenges of balancing growth and redistribution, the extent and nature of progress, change and

an intercultural environment. South Africa's transition to a greener economy features prominently in the long-term development vision of the country, and is an integral part of the country's national climate change response strategy. Despite significant gains in socio-economic development since its transition to democracy, the country continues to face the triple challenges of rising unemployment, income inequality and poverty - amid a slowdown in economic growth. Sustainability transitions offer new ways of shifting the trajectory of South Africa's resource-intensive economy towards low-carbon pathways linked to the country's transformative development

agenda. Calls for inclusive approaches to greening the South African economy, which addresses the most vulnerable in society and ensures that the benefits of sustainability innovations reach all South Africans, are becoming more pronounced as sustainable development policy reforms are being implemented. The question that should be placed centre stage in South Africa's sustainability discourse is whether notions of justice and inclusivity are being sufficiently addressed in the design and implementation of policy and programme interventions. This book explores South Africa's sustainability transition through reflections on critical policy,

It provides a synthesis of theoretical insights, including new models and concepts, and praxis through illustrations from South Africa's growing landscape of sustainable development policies and programmes. Finally, it assesses whether these transition pathways are beginning to reconfigure the system-level structures hindering the country's goal of 'ensuring environmental sustainability and an equitable transition to a low-carbon economy'.

This book analyzes the phenomenon of xenophobia across African countries. With its roots in colonialism, which coercively created modern states through border delineation and the artificial merging and dividing of communities, xenophobia continues to be a barrier to post-colonial sustainable peace and security and socio-economic and political development in Africa. This volume critically assesses how xenophobia has impacted the three elements of political economy: state, economy and society. Beginning with historical and theoretical analysis to put xenophobia in context, the book

moves on to country-specific case studies discussing the nature of xenophobia in Nigeria, South Africa, Zambia, Ghana and Zimbabwe. The chapters furthermore explore both violent and non-violent manifestations of xenophobia, and analyze how state responses to xenophobia affects African states, economies, and societies, especially in those cases where xenophobia has widespread institutional support. Providing a theoretical understanding of xenophobia and proffering sustainable solutions to the proliferation of xenophobia in the continent, this book is of use to researchers and students interested in political science, African politics, peace studies, security, and development

This book examines five hundred years of South African economic history. Over the last two decades, South Africa has accomplished enormous social progress by bringing to millions of citizens access to key public services. Nevertheless, growth has trended down markedly recently due to

constraints on the supply side. Low growth has led to the stagnation of GDP per ...

The embrace of socio-economic rights in South Africa has featured prominently in scholarship on constitution making, legal jurisprudence and social mobilisation. But the development has attracted critics who claim that this turn to rights has not generated social transformation in practice. This book sets out to assess one part of

the puzzle and asks what has been the role and impact of socio-economic strategies used by civil society actors. Focusing on a range of socio-economic rights and national trends in law and political economy, the book's authors show how socio-economic rights have influenced the development of civil society discourse and action. The evidence suggests that some strategies have achieved material and political impact but this is

conditional on the nature of the claim, degree of mobilisation and alliance building, and underlying constraints.

This volume examines the history of developmental policy in Sub-Saharan Africa and considers how different policy options might generate sustained economic growth and reduce poverty. It documents and interprets policy lessons and considers how to translate them to particular country contexts.
