Customers who place a standing order for the Tests in Print series or the Mental Measurements Yearbook series will receive a 10% discount on every volume. To place your standing order, please call 800-755-1105 (in the U.S.) or 402-472-3581 (outside the U.S.). Designed to complement the Mental Measurements Yearbooks, Tests in Print fills a pressing need for a comprehensive bibliography of all tests in print. Although these volumes are useful in and of themselves, their maximum usefulness requires the availability and use of the Mental Measurements Yearbooks. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, the excerpted test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered.

This book discusses "tourism and hospitality" from different perspectives and disciplines. In addition, this book, considering the tourism and hotel management terminology, is expected to be a source book for the theoretical and practical scientific studies in the fields which is in close relationship such as gastronomy, recreation and marketing.

***This important reference collection - prepared by a leading authority in the field - presents a careful selection of the most important articles and papers in the economics of education. It focuses in particular on the notion of education as investment rather than consumption. This field was pioneered by three American scholars - Jacob Mincer, Gary Becker and Theodore Schultz - who demonstrated that education is indeed a way in which individuals can invest in themselves in the simple sense of incurring financial costs today in order to enhance potential earnings tomorrow. There is a very strong association between education and earnings in the labour markets in both capitalist and communist countries and it is this generalisation that forms the bedrock of the doctrine of education as human capital. This major book provides testimony to the excitement and controversy that continue to be hallmarks of the economics of education and the theory of human capital.***

**Economic literacy is recognized as a deficit quality in the United States, no more prevalent than during the last great recession. It is paramount the K-12 educational system lead the movement to educate the public on economic content and issues, as it is the one institution that has direct contact with all citizens. The question then must be asked, how economic literate are teachers entrusted with the responsibility of imparting economic knowledge to his/her K-12 grade level student. A sample of Arkansas teachers at each grade level K -- 12 were tested using national normed economic literacy tests designed to test the economic knowledge of their respective grade level student. Using multiple regression, one-way and factorial ANOVA, and one-way MANOVA to analyze the data, a picture of both economic knowledge and teacher human capital investment in economics emerged. Teacher data were analyzed using a composite score, an economic content score, and scores on each of the twenty voluntary national content standards in economics as defined by the Council for Economic Education. A correlation of the voluntary national content standards in economics to Arkansas social studies curriculum frameworks allowed for analysis of Arkansas teachers' mastery on content set forth in the curriculum standards. Elementary teachers were best prepared to cover their grade level economic curriculum content and high school teachers the least prepared whether the high school content was taught in a stand-alone class or infused into another social studies course. The number of professional workshops attended were the best predictor of success on the grade level economic literacy test. Recommendations discussed include economic educational preparation of social studies teachers and grade specific professional development workshops accompanied by pedagogical techniques.**

The second edition of the Handbook of Test Development provides graduate students and professionals with an up-to-date, research-oriented guide to the latest developments in the field. Including thirty-two chapters by well-known scholars and practitioners, it is divided into five sections, covering the foundations of test development, content definition, item development, test design and form assembly, and the processes of test administration, documentation, and evaluation. Keenly aware of developments in the field since the publication of the first edition, including changes in technology, the evolution of psychometric theory, and the increased demands for effective tests via educational policy, the editors of this edition include new chapters on assessing noncognitive skills, measuring growth and learning progressions, automated item generation and test assembly, and computerized scoring of constructed responses. The volume also includes expanded coverage of performance testing, validity, fairness, and numerous other topics. Edited by Suzanne Lane, Mark R. Raymond, and Thomas M. Haladyna, *The Handbook of Test Development*, 2nd edition, is based on the revised Standards for Educational and Psychological Testing, and is appropriate for graduate courses and seminars that deal with test development and usage, professional testing services and credentialing agencies, state and local boards of education, and academic libraries serving these groups. This essential guide for curriculum developers, administrators, teachers, and education and economics professors, the standards were developed to provide a framework and benchmarks for the teaching of economics to our nation's children.

*'The volume is of greatest interest to those pursuing issues of the implementation of economics education and its impact at an elementary level on economic understanding and attitudes. Through generally careful statistical analysis it shows what can be done even in a most difficult environment, as well as the constraints on change imposed by Soviet legacies. It is a valuable addition to the literature on economics pedagogy.'* – Richard E. Ericson, *Slavic Review* This comprehensive and impressive volume presents the first book-length, multi-country investigation of reform of economic education in transition economies. Authors from the West and from transition economies describe the major changes in economics content and instruction that occurred in schools and universities throughout nations in Eastern and Central Europe and the former Soviet Union from 1989 to 2000.

*designed for a two-semester principles of economics sequence. The text has been developed to meet the scope and sequence of most introductory courses. At the same time, the book includes a number of innovative features designed to enhance student learning. Instructors can also customize the book, adapting it to the approach that works best in their classroom. The pedagogical choices, chapter arrangements, and learning objective fulfillment were developed and vetted with feedback from educators dedicated to the project. They thoroughly read the material and offered critical and detailed commentary. The outcome is a balanced approach to micro and macro economics, to both Keynesian and classical views, and to the theory and application of economics concepts. Current events are treated in a politically-balanced way as well.*

Economics is taught in some form in the secondary schools of nations throughout the world. The subject is rarely taught in elementary schools, and while economics courses are offered in universities, the majority of students end their formal education with secondary school. Thus, the best opportunity for the economic education of the youth of a nation occurs in secondary schools. This book examines economic education at this critical level of the educational system. The teaching of economics in secondary schools varies across countries. These differences occur because of history, the structure of education, and other national factors. At the same time, there are common elements in the economic education of many

countries, especially in content coverage. This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book. The international perspective is developed in the six sections of the volume. The first section discusses why nations should include economics in school curricula, and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools. The economics curricula and educational practices in seven other nations -- the U.K., Canada, Japan, Germany, Austria, Korea, and Australia -- are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic education in centrally planned economies, and its effects on the transition to a market economy, using Russia, Bulgaria, and China as case studies.
