Longlisted for the 2021 Porchlight Business Book Awards, Big Ideas & New Perspectives "She offers something both broad and scarce: a compelling new story about how to create a desirable future."—New York Times An award-winning author and leading international economist delivers a hard-hitting and much needed critique of modern capitalism in which she argues that, to solve the massive crises facing us, we must be innovative—we must use collaborative, mission-oriented thinking while also bringing a stakeholder view of public private partnerships which means not only taking risks together but also sharing the rewards. Capitalism is in crisis. The rich have gotten richer—the 1 percent, those with more than \$1 million, own 44 percent of the world's wealth—while climate change is transforming—and in some cases wiping out—life on the planet. We are plagued by crises threatening our lives, and this situation is unsustainable. But

how do we fix these problems decades in the making? Mission Economy looks at the grand challenges facing us in a radically new way. Global warming, pollution, dementia, obesity, gun violence, mobility—these environmental, health, and social dilemmas are huge, complex, and have no simple solutions. Mariana Mazzucato argues we need to think bigger and mobilize our resources in a way that is as bold as inspirational as the moon landing—this time to the most ‘wicked’ social problems of our time.. We can only begin to find answers if we fundamentally restructure capitalism to make it inclusive, sustainable, and driven by innovation that tackles concrete problems from the digital divide, to health pandemics, to our polluted cities. That means changing government tools and culture, creating new markers of corporate governance, and ensuring that corporations, society, and the government coalesce to share a common goal. We did it to go to the moon. We can do it again to fix our problems and improve the lives of every one of us. We simply can no longer afford not to.

The publication contains course outlines, unit plans, teaching instructions, and answers to the student activities and sample tests. Future economic growth lies in the value of experiences and transformations--good and services are no longer enough. We are on the threshold, say authors Pine and Gilmore, of the Experience Economy, a new economic era in which all businesses must orchestrate memorable events for their customers. The Experience Economy offers a creative, highly original, and yet eminently practical strategy for companies to script and stage the experiences that will transform the value of what they produce. From America Online to Walt Disney, the authors draw from a rich and varied mix of examples that showcase businesses in the midst of creating personal experiences for both consumers and businesses. The authors urge managers to look beyond traditional pricing factors like time and cost, and consider charging for the value of the transformation that an experience offers. Goods and services, say Pine and Gilmore, are no longer enough. Experiences and transformations are the basis for future economic growth, and The Experience Economy is the script from which managers can begin to direct their own

transformations.

From the authors: See the Invisible Hand. Understand Your World. That's the tagline of Modern Principles and our teaching philosophy. Nobel laureate Vernon Smith put it this way: At the heart of economics is a scientific mystery... a

scientific mystery as deep, fundamental and inspiring as that of the expanding universe or the forces that bind matter... How is order produced from freedom of choice? We want students to be inspired by this mystery and by how economists have begun to solve it. Thus, we show how markets interconnect and respond in surprising ways to changes in resources and preferences. Consider, for example, how markets respond to a reduction in the supply of oil. Of course, the price of oil increases giving consumers an incentive to use less and suppliers an incentive to discover more. But an increase in the price of oil also encourages Brazilian sugar cane farmers to devote more of their production to ethanol and less to sugar thereby driving up the price of sugar. An increase in the price of sugar means a reduction in the quantity of candy demanded. So one way the market responds to a reduction in the supply of oil is by encouraging consumers to eat less candy! In analyses like this, we teach students to see the invisible hand and in so doing to understand their world. Similarly, we offer a unique and simple proof of the amazing invisible hand theorem that

without any central direction competitive markets allocate production across firms in a way that minimizes aggregate costs! To understand their world students must understand when self-interest promotes the social interest and when it does not. Thus, Modern Principles has in-depth analyses of externalities, public goods, and ethical issues with market incomes and trade. Moreover, we always discuss economic theory in the context of real world problems such as the decline of the ocean fisheries, climate change, and the shortage of human organs for transplant.
