How we can achieve healthy growth--more regenerative than destructive, restoring equity rather than exacerbating inequalities. In Tomorrow's Economy, Per Espen Stoknes reframes the hot-button issue of economic growth. Going beyond the usual dialectic of pro-growth versus anti-growth, Stoknes calls for healthy growth. Healthy economic growth is more regenerative than destructive, repairs problems rather than greenwashing them, and restores equity rather than exacerbating global inequalities. Stoknes--a psychologist, economist, climate strategy researcher, and

Islamic banking and economics (IBE) is a fast-growing subject of vital interest in both East and West as Muslims change their attitudes towards investments and find ways to invest their funds according to the Islamic faith. Along with the rapid developments in Islamic banking there has been a concomitant increase in the quantity of relevant IBE material generated. Since IBE is a highly specialized cross-disciplinary field involving economics, business, marketing, religion, philosophy and culture, it is difficult for researchers to locate and obtain information without having to go through several secondary sources such as indexing and abstracting services. In this electronic age, it is essential for researchers to be aware of the various forms of

information available for consultation. Yet, until now, the few previous works on IBE information sources have been limited to the coverage of materials available during the early 1980s, before the most recent period of expansion, and in addition the materials cited were often unpublished and therefore unobtainable. In answer to a long-felt need, "Information Sources on Islamic Banking and Economics" provides a detailed bibliography of IBE sources concentrating on the period 1980-1990 with some data from 1991 and 1992, and with the additional unique feature of setting out, for the first time, the information infrastructure of the IBE discipline. A comprehensive author index and a keyword subject index for important terms are provided, and only published - and therefore easily obtainable - items have been included. This book is essential reading for all researchers, economists, bankers and others who need

This book deals with economic theory, not methodology. It does employ certain methodological resolutions. These resolutions and the limitations they impose on the nature and the scope of the analysis are reviewed. The first resolution concerns what kind of a theory is to be discussed. The word theory may mean many things; it may mean a hypothesis put forward as an explanation of something, an idea, or a notion. In a normative sense it may mean a

recommendation, a rule, or principle to be followed. In science it usually means a system of hypotheses to be accepted as an explanation of certain facts, a set of general laws, and principles. It is also used to distinguish the general principles and methods of a subject from the practice of it. The theory with which this volume is concerned is that of science. In very general terms it may be defined as a system of hypotheses, one following from another, which permits the reader to derive from known facts and predictions of

other facts. If the knowledge of the fact which we predict is important for us, in the sense that it permits us to achieve better the objectives we pursue, the theory may have a practical value. This book is therefore not only a contribution to the analysis of expectations but also an introduction to a number of selected topics in economic theory.
