In 2005, The United Nations launched its Decade of Education for Sustainable Development, which recognises that education, including Higher Education is the key to the change in social attitudes that will be needed to protect the welfare of future generations. This involves helping learners to live as though the future matters and to achieve ecoliteracy. This includes the understanding that personal lifestyle decisions may have consequences, ranging from climate change, through loss of biodiversity, to pollution and resource depletion that may permit environmental degradation on a planetary scale. It also involves helping them to develop the skills needed to cope with such challenges. This international collection of research papers and position statements from special issues of the Journal of Geography in Higher Education and Applied Environmental Education and Communication, written by many of the leading practitioners in the field, aims to provide resources and practical guidance for all seeking to promote and engage in education for a sustainable future. Rabindranath Tagore encouraged each learner to make their actions demonstrate a harmonious union between education and environment. David Orr argued that the world needs people who live well in their places to make the world both habitable and humane and that the main challenge for education is to help learners make their minds fit for life on Earth. This book tries to chart a practical route towards these objectives. This book was previously published as special issues of the Journal of Geography in Higher Education and Applied Environmental Education and Communication

What is poverty and how can it be tackled? Taking the Third Way out of its narrow party political context, this book argues that it is necessary to harness work beyond employment in order to pave a Third Way beyond capitalism and socialism. The outcome is a thought-provoking new approach towards combating poverty. Poverty and the Third Way uncovers how New Labour's employment-focussed approach causes, rather than resolves, poverty. Searching for another approach, the authors find the seeds of an alternative 'Third Way' in radical European social democratic and ecological thought which seeks to transcend capitalism and socialism by developing work beyond employment. Exploring the reasons why such an approach is needed and how it can be implemented, the authors transcend the 'there is no alternative' to capitalism school of thought dominant in many advanced economies by providing a clearly marked route map of the way towards a post-capitalist economy.

This edited collection explores ways in which social justice can be integrated into career guidance practice. Chapter authors propose models and practices which can contribute to struggles for social justice and consider how career guidance can play a role in these struggles. They explore policy and practice in the light of critical social theory both critiquing career guidance and opening up new possibilities for the field. The volume moves the discipline away from its overwhelming reliance on psychology in favor of theoretically pluralistic approaches informed by critical thinking in a range of disciplines. It seeks to expand the possibilities that are available to career guidance practitioners and researchers to support the growth of human flourishing and solidarity.
