This joint OECD-ILO publication provides guidance on how local and regional governments can foster business-education partnerships in apprenticeship programmes and other types of work-based learning, drawing on case studies across nine countries. There has been increasing interest in apprenticeships which combine on the job training with classroom-based study, providing a smooth transition from school to work. There are benefits to both individuals and employers from participating in apprenticeships, including increased productivity and job quality. Successful implementation is contingent on having a high level of employer engagement at the local level, notably in the design, development and delivery of programmes.

This glimpse into factories, hospitals, other work settings, and work-related literacy programs, shows the massive changes in expectations for workers' "skills" in the twenty-first century, especially regarding language and literacy.

After a period of relative neglect in many countries, apprenticeships and other forms of work-based learning are experiencing a revival. Their effectiveness in easing school-to-work transitions and serving the economy is increasingly recognised. However, engaging individuals, employers, social partners and education and training systems in such learning remains a significant challenge. In light of this, Seven Questions about

Apprenticeships draws out policy messages on how to design and implement high-quality apprenticeships, using material from the OECD project Work-based Learning in Vocational Education and Training. It presents answers to seven questions commonly asked by governments and practitioners seeking to either introduce or reform apprenticeship systems for young people and/or older workers. Can apprenticeships provide a useful contribution in every country? Should employers receive financial incentives for providing apprenticeships? What is the right wage for apprentices, and how long should an apprenticeship last? How can we ensure a good learning experience at work? How can apprenticeships be made to work for youth at risk? And how to attract potential apprentices? The study establishes principles of effective practice by building on new analytical work and examples of effective practice from around the world.
