

**Electronic Ticketing System Implementation Process Thredbo**

**"This book provides examinations of the adoption and impact of e-government"--Provided by publisher.**  
**This book constitutes the thoroughly refereed proceedings of the 16th International Conference on Transport Systems Telematics, TST 2016, held in Katowice-Ustrón, Poland, in March 2016. The 37 full and 5 short papers presented in this volume were carefully reviewed and selected from 110 submissions. They present and organize the knowledge from within the field of intelligent transportation systems, the specific solutions applied in it and their influence on improving efficiency of transport systems.**  
**This book presents multi-sector practical cases based on the author's own research. It also includes the best practice, which could serve as a benchmark for the creation of smart cities. The global urbanisation index, i.e., the ratio of city dwellers to the total population, has been steadily increasing in recent years. It is highest in the Americas, followed by Europe, Asia and Africa. The city of the future will combine the intelligent use of IT systems with the potential of institutions, companies and committed, creative inhabitants. The administrative boundaries of today's cities put certain constraints on their further growth, but in the future these boundaries will no longer be as relevant. Cities in Europe face the challenge of reconciling sustainable urban development and competitiveness - a challenge that will likely influence issues of urban quality such as the economy, culture, social and environmental conditions, changing a given city's profile as well as urban quality in terms of its composition and characteristics.**  
**This important new volume presents recent research in healthcare information technology and analytics. Individual chapters look at such issues as the impact of technology failure on electronic prescribing behavior in primary care; attitudes toward electronic health records; a latent growth modeling approach to understanding lifestyle decisions based on patient historical data; designing an integrated surgical care delivery system using axiomatic design and petri net modeling; and failure in a dynamic decision environment, particularly in treating patients with a chronic disease. Other chapters look at such topics as the impact of information technology integration in integrated delivery systems; operations and supply chain control for inventory management in a health system pharmacy; decision-theoretic assistants based on contextual gesture recognition; evaluating emergency response medical information systems; clinical decision support in critical care; virtual worlds in healthcare; and natural language processing for understanding contraceptive use at the VA.**

**Whose Game Is It?**

"This book offers insights into issues, challenges, and solutions related to the successful application and management aspects of electronic business, providing a comprehensive framework for researchers and practitioners in understanding the growing demand of e-business research"--Provided by publisher.  
 Enterprise security is an important area since all types of organizations require secure and robust environments, platforms and services to work with people, data and computing applications. The book provides selected papers of the Second International Workshop on Enterprise Security held in Vancouver, Canada, November 30-December 3, 2016 in conjunction with CloudCom 2015. The 11 papers were selected from 24 submissions and provide a comprehensive research into various areas of enterprise security such as protection of data, privacy and rights, data ownership, trust, unauthorized access and big data ownership, studies and analysis to reduce risks imposed by data leakage, hacking and challenges of Cloud forensics.  
 This book presents the most interesting talks given at ISSE 2013 - the forum for the inter-disciplinary discussion of how to adequately secure electronic business processes. The topics include: - Cloud Security, Trust Services, eId & Access Management - Human Factors, Awareness & Privacy, Regulations and Policies - Security Management - Cyber Security, Cybercrime, Critical Infrastructures - Mobile Security & Applications Adequate information security is one of the basic requirements of all electronic business processes. It is crucial for effective solutions that the possibilities offered by security technology can be integrated with the commercial requirements of the applications. The reader may expect state-of-the-art best papers of the Conference ISSE 2013.  
 In managerial literature the challenges of ramping-up, growing and enhancing a (Finance) Shared Services Organization are regularly neglected. Therefore, the compilation will address two objectives: First, based on a generic phase model of an SSO's development, frequently arising questions related to the management of SSOs shall be systematically discussed and practicable solutions derived. Secondly, a picture of the future of SSOs shall be elaborated, resulting in new future management implications.

 Intelligent Systems: Theory, Research and Innovation in Applications

"This book provides fundamental research on the architecture of learning technology systems, discussing such issues as the common structures in LTS and solutions for specific forms such as knowledge-based, distributed, or adaptive applications of e-learning. Researchers, and scholars in the fields of learning content software development, computing and educational technologies, and e-learning will find it an invaluable resource"--Provided by publisher.  
 Introduction to Information Systems, 9th Edition delivers an essential resource for undergraduate business majors seeking ways to harness information technology systems to succeed in their current or future jobs. The book assists readers in developing a foundational understanding of information systems and technology and apply it to common business practices.

Over the last few years, Intelligent Transport Systems (ITS) has become important for any country not only for traffic congestion management, but also for modern infrastructure and safety. Since there is a dearth of literature on this subject, this book attempts to fill the gap and provides a holistic work on ITS encompassing theory, examples and case studies on various facets in both road and railway sectors. The basic principles of various technologies used for ITS have been explained in such a manner that students from non-technical background can also comprehend them with ease. It also discusses the emerging technologies such as autonomous vehicles, electric vehicles, cooperative vehicle highway system, automated highway systems, 5G mobile technology, etc. Considering the need of huge funds required for ITS implementation, the text provides various funding options available. Conclusively, it is a unique book that contains all aspects of ITS which a student of engineering is expected to know. The book is intended as a text for postgraduate students of transportation engineering and as a reference book for professionals such as transport planners, town planners, traffic engineers, transit operators and consultants. Key Features, • ITS architecture with a number of case studies based on real-life situation • Concept of smart city, importance of advanced transport system, and applications of ITS technologies in smart cities • ITS in Rail sector—intelligent trains, train control systems and intelligent train maintenance practices • Chapter-end questions for practice and bibliography

This final report deals with the development of integrated e-ticketing systems for public transport and touristic sites in cities. The idea of integrated e-ticketing is to combine several modes of transport (e.g. tram, bus, car, and bike-sharing) on a single ticket. Modern multi-application smart cards are able to incorporate additional fields of application (e.g. leisure activities or tourist attractions) on one fare medium. Such systems aim at facilitating the combination of modes and transferring between them by making the ticketing system as easy and attractive as possible. For over a decade, integrated ticketing has been on the agenda of EU transport policy. While technologies are already available and ready to meet multi-function requirements, e-ticketing has not yet been implemented on a wider scale in Europe. The implementation of an integrated e-ticketing system is a complex process that requires the synchronised activity of heterogeneous actors. ~Public transport operators and authorities, financial service providers, telecommunications operators, and the tourism sector need to work together to combine their products on a single card. Besides technological characteristics, legal and economic aspects play a decisive role. Stakeholders that are involved in the implementation of an integrated ticketing system need to agree on technical specifications as well as on institutional and governance issues. For this report, relevant studies, reports and surveys have been reviewed in order to provide an overview on technical and non-technical aspects on the e-ticketing environment. Such an integrated perspective is needed to understand and govern successful pathways towards integrated e-ticketing schemes. ~This report focuses on the interrelations between different stakeholders; on the factors that might influence their decision making to engage in the implementation process and it explains the role of each actor in the systems architecture. A particular focus lies on potential and existing end-users. It will be highlighted that end-users are not a homogenous social category, but that they desire different products, predominantly based on their travel purposes.

 Encyclopedia of E-Commerce, E-Government, and Mobile Commerce  
 Cultural Dynamics in a Globalized World

This report analyses e-government implementation in Egypt and presents a series of recommendations for action.  
 Annotation Presents a portfolio of concepts, methods, models, and tools supported by real life case studies from various corners of the globe providing insights into the management of knowledge in the construction industry.  
 Cases on Worldwide E-Commerce: Theory in Action provides detailed case studies of opportunities and challenges in worldwide e-commerce as the Internet economy and globalization trends erase the traditional IT and geographical boundaries. The cases, based on real life experience in e-commerce will demonstrate situations and challenges for a world in which IT is no longer restricted by corporate walls.

This book constitutes the thoroughly refereed post-conference proceedings of the International Conference on Trusted Systems, INTRUST 2011, held in Beijing, China, in November 2011. The 21 revised full papers were carefully reviewed and selected from 34 submissions for inclusion in the book. Except these contributed papers the program of INTRUST also consisted of a workshop titled Asian Lounge on Trust, Security and Privacy consisting of six keynote speeches. The papers are organized in topical sections on trusted services, mobile trusted systems, security analysis, cryptographic aspects, trusted networks, implementation, and direct anonymous attestation.

**The book contains essays on current issues in arts and humanities in which peoples and cultures compete as well as collaborate in globalizing the world while maintaining their uniqueness as viewed from cross- and interdisciplinary perspectives. The book covers areas such as literature, cultural studies, archaeology, philosophy, history, language studies, information and literacy studies, and area studies. Asia and the Pacific are the particular regions that the conference focuses on as they have become new centers of knowledge production in arts and humanities and, in the future, seem to be able to grow significantly as a major contributor of culture, science and arts to the globalized world. The book will help shed light on what arts and humanities scholars in Asia and the Pacific have done in terms of research and knowledge development, as well as the new frontiers of research that have been explored and opening up, which can connect the two regions with the rest of the globe.**  
**Responding to the dual pressures of globalization and economic downturn, communities across the world formerly driven by agriculture and industry are increasingly turning toward tourism as an economic mainstay. In order for industry leaders to compete with the efforts of competitors and savvy marketers, new business models must be defined which allow for the incorporation of e-tourism tools and expansion into the global marketplace. New Business Opportunities in the Growing E-Tourism Industry offers case studies and research that highlights the impact of globalization on travel and tourism and offers solutions to potential problems. Targeting an audience of researchers and business professionals, this volume brings together a diverse international body of scholars and researchers to provide a holistic perspective of future developments in the e-tourism industry. This volume compiles the research and perspectives of researchers and industry professionals, uniting a variety of topics including medical tourism, traffic-management, route-planning, virtual museums, digital spot-hunting via film-mosaic, and tourism for the elderly and disabled.**  
**ISBN : 978-967-2145-844 Authors : Nurul Azma Zakaria & Zakiah Ayop In this chapter in book, there are five chapters which address the development of smart systems and its application in areas such as health, transportation, home security and human detection. These examples would be relevant not only to young researchers or inventors in secondary school, undergraduate and graduates but also to researchers and individuals alike.**  
**ICSSCET 2015 will be the most comprehensive conference focused on the various aspects of advances in Systems, Science, Management, Medical Sciences, Communication, Engineering, Technology, Interdisciplinary Research Theory and Technology. This Conference provides a chance for academic and industry professionals to discuss recent progress in the area of Interdisciplinary Research Theory and Technology. Furthermore, we expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject. The goal of this conference is to bring together the researchers from academia and industry as well as practitioners to share ideas, problems and solutions relating to the multifaceted aspects of Interdisciplinary Research Theory and Technology.**

**This book examines a range of issues emerging from the interaction of Information Technologies and organizational systems. It contains a collection of research papers focusing on themes of growing interest in the field of Information Systems, Organization Studies, and Management. The book offers a multidisciplinary view on Information Systems aiming to disseminate academic knowledge. It might be particularly relevant to IT practitioners such as information systems managers, business managers and IT consultants. The volume is divided into six sections, each one focusing on a specific theme. The content of each section is based on a selection of the best papers (original double blind peer reviewed contributions) presented at the annual conference of the Italian chapter of AIS, which has been held in Rome, Italy in September 2012.**

**Compiles top research from the world's leading experts on many topics related to electronic commerce. Covers topics including mobile commerce, virtual enterprises, business-to-business applications, Web services, and enterprise methodologies.**  
**This two-volume set LNCS 4803/4804 constitutes the refereed proceedings of the five confederated international conferences on Cooperative Information Systems (CoopIS 2007), Distributed Objects and Applications (DOA 2007), Ontologies, Databases and Applications of Semantics (ODBASE 2007), Grid computing, high performance and Distributed Applications (GADA 2007), and Information Security (IS 2007) held as OTM 2007 in Vilamoura, Portugal, in November 2007. The 95 revised full and 21 revised short papers presented together with 5 keynote talks were carefully reviewed and selected from a total of 362 submissions. Corresponding with the five OTM 2007 main conferences CoopIS, ODBASE, GADA, and DOA, the papers are organized in topical sections on process analysis and semantics, process modeling, P2P, collaboration, business models, distributed and web services, aspects and development tools, mobility and distributed algorithms, frameworks, patterns, and testbeds, ontology mapping, semantic querying, ontology development, learning and text mining, annotation and metadata management, ontology applications, data and storage, networks, collaborative grid environment and scientific grid applications, scheduling, middleware, data analysis, scheduling and management, access control and authentication, intrusion detection, system and services security, network security, malicious code and code security, as well as trust and information management.**  
**The International Conference on E-Commerce and Web Technologies (EC-Web) is a mature and well-established forum for researchers working in the area of electronic commerce and web technologies. These are the proceedings of the ninth conference in the series, which, like previous EC-Web conferences, was co-located with DEKA, the International Conference on Database and Expert Systems Applications, which, this year, took place in Turin, Italy. One key feature of EC-Web is its two-fold nature: it brings together both papers proposing technological solutions for e-commerce and the World Wide Web, and papers concerning the management of e-commerce, such as web marketing, the impact of e-commerce on business processes and organizations, the analysis of case studies, as well as social aspects of e-commerce (to understand the impact of e-commerce solutions on day-to-day life and the new opportunities that these behaviors open). The technical program included 12 reviewed papers and two invited papers. Each paper was reviewed by five reviewers, in order to select only the best quality papers. The program included five sessions: "Security in E-Commerce" (with two papers), "Social Aspects of E-Commerce" (with two papers), "Business Process and EC Infrastructures" (with three papers), "Recommender Systems and E-Negotiations" (with four papers) and "Web Marketing and User Profiling" (with three papers). We found the program interesting and we hope participants and readers feel the same. Furthermore, we hope the attendees enjoyed the conference and Turin. June 2008 Giuseppe Fisala Roland F. Wiegner**  
**This book discusses the management specific for software implementors within the healthcare industry. It can be used as a beginners' guide as well as a reference for current project managers who might be new to software implementations. Utilizing the Project Management Institute's (PMI) methodology, the defined process groups and knowledge areas will be defined related to implementing custom and Commercial Off The Shelf (COTS) software. The Software Development Life Cycle (SDLC) is a standard for developing custom software, but can also be followed for implementing COTS applications as well. How will the system be set-up from an architecture and hardware standpoint? What environments will be needed and why? How are changes managed throughout the project and after? These questions and more will be reviewed. The differences between types of testing are defined as well as when each are utilized. Planning for the activation and measuring the success of the project and how well the strategic need has been met are key activities that are often not given the time and effort to plan as the other parts of the implementation project. This new edition updates the current content to better align with the newest version of the PMI's Project Management Body of Knowledge (PMBOK), the latest technology and concepts. In addition, this new edition includes additional chapters covering security and privacy, contract management and system selection and transition to support.**

**Advanced Solutions of Transport Systems for Growing Mobility**

This book contains the proceedings of the 15th International Conference on Law and Human Rights (ICLHR 2021), where held on 14rd-15th April 2021 by virtually meeting in GWF+7 (Asia/Jakarta). This conference was held by Universitas Kristen Indonesia with the theme "ASEAN diversities and its principles toward ASEAN (Legal) Integration in Pandemic Era." The papers from this conference were collected in a proceedings book entitled: Proceedings of the First International Conference on Law and Human Rights (ICLHR 2021). The presentation of such a multi-discipline conference will provide a lot of inspiring inputs and new knowledge on current trends in the fields of human rights, criminal law, civil law, politics, public policy, health law, education law, economic law, international law, and international private law. According to the argument, this conference will act as a valuable reference for numerous relevant research efforts in the future, especially in ASEAN. The committee recognizes that the smoothness and success of this conference cannot be separated from the cooperation of numerous stakeholders. As such, we like to offer our profound gratitude to the distinguished keynote speaker, invited speaker, paper presenters, and participants for their enthusiastic support of joining the First International Conference on Law and Human Rights. We are convinced that the contents of the study from various papers are not only encouraged productive discussion among presenters and participants but also inspire further research in the respected field. We are greatly grateful for your willingness to join and share your knowledge and expertise at our conference. Your input was essential in ensuring the success of our conference. Finally, we hope that this conference will serve as a forum for learning in building togetherness, especially for academic networks and the realization of a meaningful academic atmosphere for the development of digital literacy in various fields of life. Thus, we hope to see you all at the second ICLHR. This book constitutes the proceedings of the 14th International Conference on Transport Systems Telematics, TST 2014, held in Katowice/Krakow & Ustrón, Poland, in October 2014. The 49 papers included in this volume were carefully reviewed and selected from 125 submissions. The papers provide an overview of solutions being developed in the fields of transport telematics and intelligent transport systems.

This book constitutes the proceedings of the 15th International Conference on Transport Systems Telematics, TST 2015, held in Wrocław, Poland, in April 2015. The 35 revised full papers and two short papers included in this volume were carefully reviewed and selected from 115 submissions. The papers provide an overview of solutions being developed in the fields of transport telematics and intelligent transport systems.  
 From artificial neural net / game theory / semantic applications, to modeling tools, smart manufacturing systems, and data science research - this book offers a broad overview of modern intelligent methods and applications of machine learning, evolutionary computation, Industry 4.0 technologies, and autonomous agents leading to the Internet of Things and potentially a new technological revolution. Though chiefly intended for IT professionals, it will also help a broad range of users of future emerging technologies adapt to the new smart / intelligent wave. In separate chapters, the book highlights fourteen successful examples of recent advances in the rapidly evolving area of intelligent systems. Covering major European projects paving the way to a serious smart / intelligent collaboration, the chapters explore e.g. cyber-security issues, 3D digitization, aerial robots, and SMEs that have introduced cyber-physical production systems. Taken together, they offer unique insights into contemporary artificial intelligence and its potential for innovation.

INTELLIGENT TRANSPORT SYSTEMS

**The Project Manager's Guide to Health Information Technology Implementation**  
 A state-of-the-art, one-stop resource, Public Administration in South Asia: India, Bangladesh, and Pakistan examines public administration issues and advances in the Indian subcontinent. The book fulfills a critical need. These nations have the largest public administration programs in South Asia, yet existing knowledge on them is fragmented at best. Bringing together leading scholars from these countries, this book provides both an insider perspective and a scholarly look at the challenges and accomplishments in the region. Focusing on the machinery of government, the book explores questions such as: What is the history of public administration development? How are major decisions made in the agencies? Why are anti-corruption efforts so much a challenge? What is the significance of intergovernmental relations? What is the success of administrative reform? What are examples of successful social development programs? How successful is e-government, and what are its challenges? Why is civil service reform difficult to achieve? How is freedom of information being used as a means to combat corruption and invoke grassroots activism? What can be learned from the successes and failures? While public administration practice and education have become considerably professionalized in the last decade, a sufficiently in-depth and well-rounded reference on public administration in these countries is sorely lacking. Most available books tackle only aspects of public administration such as administrative reforms, civil service, economic developments, or public policy, and are country specific. None provide the in-depth analysis of the sphere of public action in South Asia found in this book. It supplies an understanding of how public administration can be either the source of, or solution to, so many of the problems and achievements in the Indian subcontinent.  
 What are the parameters that should be taken into account in an advanced simulation model designed for a transport system that promotes green travelling policies? How can the goal of modal shift be pursued through ICT solutions? Is it enough to apply only a single criterion when planning transport systems? What is the importance of information acquisition and provision in Intelligent Transport Systems? Answers to these and many other questions can be found in this publication. It also contains numerous analyses based on relevant data sets, illustrating the close relationship between ITS and the changes observed in terms of how specific means of transport are used. What proves to be particularly important for advanced transport systems is the use of environmentally friendly solutions that reduce their negative environmental impacts; accordingly, the book also addresses this aspect. With regard to the research results discussed and the selected solutions applied, the book primarily addresses the needs of three target groups: · Scientists and researchers (ITS field) · Local authorities (responsible for transport systems at the urban and regional level) · Representatives of business (traffic strategy management) and industry (manufacturers of ITS components) Advanced Solutions of Transport Systems for Growing Mobility gathers selected papers presented at the 14th "Transport Systems. Theory and Practice" Scientific and Technical Conference, organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 18-20 September 2017 in Katowice (Poland). More details at www.TSTP.polsl.pl

Embarking on electronic business is a challenging task. There is also a lack of clear understanding and comprehensive analysis of various issues and domains of electronic business. This book offers a very comprehensive analysis of concepts, models and infrastructures of e-business. It also presents unique observations of current e-business practices for different organizations in different economies and provides insights on the future of current leading businesses on the net and the trends of e-business. The volume will be an effective and indispensable reference book for professionals who are interested in or dealing with e-business and businesses that are embarking on e-business. Sample Chapter(s): Introduction (106 KB). Chapter 1: Overview-Part I: Foundation of E-Business and E-Business Technologies (318 KB). Contents: Overview of Current Status of E-Business: Overview-Part I: Foundation of E-Business and E-Business Technologies (J Xu & M Quaddus); Overview-Part II: B2C, B2B and Other Types of E-Business (J Xu & M Quaddus); Studies of E-Business Issues and Challenges: Factors Influencing Online Auction Adoption: A China Study (M Quaddus & J Xu); Factors Influencing Online Advertising: A National Survey Among Small & Medium Enterprises in Australia (J Heiligtag et al.); E-Learning in Emerging Countries: Case Studies of Republic of Tunisia, the Kingdom of Saudi Arabia, and People's Democratic Republic of Algeria (I B Dhau & F Abdessemed); Consumers' Adoption of Electronic Ticketing: An Application in the Air Travel Industry in Tunisia (A Allagui & M S B Mimoun); Success Factors of E-Tailing: A China Study (W-B Xuan et al.); A Framework for Business-to-Business E-Commerce Evaluation Challenges and Critical Success Factors (C Lin & Y-A Huang); The Diffusion of Web 2.0 Platforms: The Problem of Oscillating Degrees of Utilization (T Kollmann et al.); Application of Wireless Technologies in Mobile Business (W-Z Gao); Theories and Factors Affecting Electronic Commerce Adoption in Small and Medium Enterprises (SMEs): A Review (S Al-Somali et al.); Factors of Commercial Website Success in Small and Medium Enterprises: An Indonesian Study (et al.); E-Commerce Adoption in Small Enterprises: An Australian Study (J Hallal et al.); Outlook of E-Business: Future of E-Business, Success Factors and E-Business Opportunities (J Xu & M Quaddus); Achieving Sustainable E-Business Success: Development and Application of a Model of E-Business Adoption, Success and Sustainable Success (J Xu & M Quaddus); Readership: Academic and professionals in e-business, innovation technology, international trade, entrepreneurship and decision sciences.

These are the proceedings of the ninth conference in the series, which, like previous EC-Web conferences, was co-located with DEKA, the International Conference on Database and Expert Systems Applications, which, this year, took place in Turin, Italy. One key feature of EC-Web is its two-fold nature: it brings together both papers proposing technological solutions for e-commerce and the World Wide Web, and papers concerning the management of e-commerce, such as web marketing, the impact of e-commerce on business processes and organizations, the analysis of case studies, as well as social aspects of e-commerce (to understand the impact of e-commerce solutions on day-to-day life and the new opportunities that these behaviors open). The technical program included 12 reviewed papers and two invited papers. Each paper was reviewed by five reviewers, in order to select only the best quality papers. The program included five sessions: "Security in E-Commerce" (with two papers), "Social Aspects of E-Commerce" (with two papers), "Business Process and EC Infrastructures" (with three papers), "Recommender Systems and E-Negotiations" (with four papers) and "Web Marketing and User Profiling" (with three papers). We found the program interesting and we hope participants and readers feel the same. Furthermore, we hope the attendees enjoyed the conference and Turin. June 2008 Giuseppe Fisala Roland F. Wiegner**  
**This book discusses the management specific for software implementors within the healthcare industry. It can be used as a beginners' guide as well as a reference for current project managers who might be new to software implementations. Utilizing the Project Management Institute's (PMI) methodology, the defined process groups and knowledge areas will be defined related to implementing custom and Commercial Off The Shelf (COTS) software. The Software Development Life Cycle (SDLC) is a standard for developing custom software, but can also be followed for implementing COTS applications as well. How will the system be set-up from an architecture and hardware standpoint? What environments will be needed and why? How are changes managed throughout the project and after? These questions and more will be reviewed. The differences between types of testing are defined as well as when each are utilized. Planning for the activation and measuring the success of the project and how well the strategic need has been met are key activities that are often not given the time and effort to plan as the other parts of the implementation project. This new edition updates the current content to better align with the newest version of the PMI's Project Management Body of Knowledge (PMBOK), the latest technology and concepts. In addition, this new edition includes additional chapters covering security and privacy, contract management and system selection and transition to support.**

This book contains the proceedings of the 15th International Conference on Law and Human Rights (ICLHR 2021), where held on 14rd-15th April 2021 by virtually meeting in GWF+7 (Asia/Jakarta). This conference was held by Universitas Kristen Indonesia with the theme "ASEAN diversities and its principles toward ASEAN (Legal) Integration in Pandemic Era." The papers from this conference were collected in a proceedings book entitled: Proceedings of the First International Conference on Law and Human Rights (ICLHR 2021). The presentation of such a multi-discipline conference will provide a lot of inspiring inputs and new knowledge on current trends in the fields of human rights, criminal law, civil law, politics, public policy, health law, education law, economic law, international law, and international private law. According to the argument, this conference will act as a valuable reference for numerous relevant research efforts in the future, especially in ASEAN. The committee recognizes that the smoothness and success of this conference cannot be separated from the cooperation of numerous stakeholders. As such, we like to offer our profound gratitude to the distinguished keynote speaker, invited speaker, paper presenters, and participants for their enthusiastic support of joining the First International Conference on Law and Human Rights. We are convinced that the contents of the study from various papers are not only encouraged productive discussion among presenters and participants but also inspire further research in the respected field. We are greatly grateful for your willingness to join and share your knowledge and expertise at our conference. Your input was essential in ensuring the success of our conference. Finally, we hope that this conference will serve as a forum for learning in building togetherness, especially for academic networks and the realization of a meaningful academic atmosphere for the development of digital literacy in various fields of life. Thus, we hope to see you all at the second ICLHR. This book constitutes the proceedings of the 14th International Conference on Transport Systems Telematics, TST 2014, held in Katowice/Krakow & Ustrón, Poland, in October 2014. The 49 papers included in this volume were carefully reviewed and selected from 125 submissions. The papers provide an overview of solutions being developed in the fields of transport telematics and intelligent transport systems.

This book constitutes the proceedings of the 15th International Conference on Transport Systems Telematics, TST 2015, held in Wrocław, Poland, in April 2015. The 35 revised full papers and two short papers included in this volume were carefully reviewed and selected from 115 submissions. The papers provide an overview of solutions being developed in the fields of transport telematics and intelligent transport systems.  
 From artificial neural net / game theory / semantic applications, to modeling tools, smart manufacturing systems, and data science research - this book offers a broad overview of modern intelligent methods and applications of machine learning, evolutionary computation, Industry 4.0 technologies, and autonomous agents leading to the Internet of Things and potentially a new technological revolution. Though chiefly intended for IT professionals, it will also help a broad range of users of future emerging technologies adapt to the new smart / intelligent wave. In separate chapters, the book highlights fourteen successful examples of recent advances in the rapidly evolving area of intelligent systems. Covering major European projects paving the way to a serious smart / intelligent collaboration, the chapters explore e.g. cyber-security issues, 3D digitization, aerial robots, and SMEs that have introduced cyber-physical production systems. Taken together, they offer unique insights into contemporary artificial intelligence and its potential for innovation.

**The Project Manager's Guide to Health Information Technology Implementation**  
 A state-of-the-art, one-stop resource, Public Administration in South Asia: India, Bangladesh, and Pakistan examines public administration issues and advances in the Indian subcontinent. The book fulfills a critical need. These nations have the largest public administration programs in South Asia, yet existing knowledge on them is fragmented at best. Bringing together leading scholars from these countries, this book provides both an insider perspective and a scholarly look at the challenges and accomplishments in the region. Focusing on the machinery of government, the book explores questions such as: What is the history of public administration development? How are major decisions made in the agencies? Why are anti-corruption efforts so much a challenge? What is the significance of intergovernmental relations? What is the success of administrative reform? What are examples of successful social development programs? How successful is e-government, and what are its challenges? Why is civil service reform difficult to achieve? How is freedom of information being used as a means to combat corruption and invoke grassroots activism? What can be learned from the successes and failures? While public administration practice and education have become considerably professionalized in the last decade, a sufficiently in-depth and well-rounded reference on public administration in these countries is sorely lacking. Most available books tackle only aspects of public administration such as administrative reforms, civil service, economic developments, or public policy, and are country specific. None provide the in-depth analysis of the sphere of public action in South Asia found in this book. It supplies an understanding of how public administration can be either the source of, or solution to, so many of the problems and achievements in the Indian subcontinent.  
 What are the parameters that should be taken into account in an advanced simulation model designed for a transport system that promotes green travelling policies? How can the goal of modal shift be pursued through ICT solutions? Is it enough to apply only a single criterion when planning transport systems? What is the importance of information acquisition and provision in Intelligent Transport Systems? Answers to these and many other questions can be found in this publication. It also contains numerous analyses based on relevant data sets, illustrating the close relationship between ITS and the changes observed in terms of how specific means of transport are used. What proves to be particularly important for advanced transport systems is the use of environmentally friendly solutions that reduce their negative environmental impacts; accordingly, the book also addresses this aspect. With regard to the research results discussed and the selected solutions applied, the book primarily addresses the needs of three target groups: · Scientists and researchers (ITS field) · Local authorities (responsible for transport systems at the urban and regional level) · Representatives of business (traffic strategy management) and industry (manufacturers of ITS components) Advanced Solutions of Transport Systems for Growing Mobility gathers selected papers presented at the 14th "Transport Systems. Theory and Practice" Scientific and Technical Conference, organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 18-20 September 2017 in Katowice (Poland). More details at www.TSTP.polsl.pl

Embarking on electronic business is a challenging task. There is also a lack of clear understanding and comprehensive analysis of various issues and domains of electronic business. This book offers a very comprehensive analysis of concepts, models and infrastructures of e-business. It also presents unique observations of current e-business practices for different organizations in different economies and provides insights on the future of current leading businesses on the net and the trends of e-business. The volume will be an effective and indispensable reference book for professionals who are interested in or dealing with e-business and businesses that are embarking on e-business. Sample Chapter(s): Introduction (106 KB). Chapter 1: Overview-Part I: Foundation of E-Business and E-Business Technologies (318 KB). Contents: Overview of Current Status of E-Business: Overview-Part I: Foundation of E-Business and E-Business Technologies (J Xu & M Quaddus); Overview-Part II: B2C, B2B and Other Types of E-Business (J Xu & M Quaddus); Studies of E-Business Issues and Challenges: Factors Influencing Online Auction Adoption: A China Study (M Quaddus & J Xu); Factors Influencing Online Advertising: A National Survey Among Small & Medium Enterprises in Australia (J Heiligtag et al.); E-Learning in Emerging Countries: Case Studies of Republic of Tunisia, the Kingdom of Saudi Arabia, and People's Democratic Republic of Algeria (I B Dhau & F Abdessemed); Consumers' Adoption of Electronic Ticketing: An Application in the Air Travel Industry in Tunisia (A Allagui & M S B Mimoun); Success Factors of E-Tailing: A China Study (W-B Xuan et al.); A Framework for Business-to-Business E-Commerce Evaluation Challenges and Critical Success Factors (C Lin & Y-A Huang); The Diffusion of Web 2.0 Platforms: The Problem of Oscillating Degrees of Utilization (T Kollmann et al.); Application of Wireless Technologies in Mobile Business (W-Z Gao); Theories and Factors Affecting Electronic Commerce Adoption in Small and Medium Enterprises (SMEs): A Review (S Al-Somali et al.); Factors of Commercial Website Success in Small and Medium Enterprises: An Indonesian Study (et al.); E-Commerce Adoption in Small Enterprises: An Australian Study (J Hallal et al.); Outlook of E-Business: Future of E-Business, Success Factors and E-Business Opportunities (J Xu & M Quaddus); Achieving Sustainable E-Business Success: Development and Application of a Model of E-Business Adoption, Success and Sustainable Success (J Xu & M Quaddus); Readership: Academic and professionals in e-business, innovation technology, international trade, entrepreneurship and decision sciences.

ICSSCET 2015 will be the most comprehensive conference focused on the various aspects of advances in Systems, Science, Management, Medical Sciences, Communication, Engineering, Technology, Interdisciplinary Research Theory and Technology. This Conference provides a chance for academic and industry professionals to discuss recent progress in the area of Interdisciplinary Research Theory and Technology. Furthermore, we expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject including Power Engineering, Telecommunication, Integrated Circuit, Electronic amplifier , Nano-technologies, Circuits and networks, Microelectronics, Analog circuits, Digital circuits, Circuits design, Silicon devices, Thin film technologies, VLSI, Sensors, CAD tools, Molecular computing, Superconductivity circuits, Antennas technology, System architectures, etc.

**This book examines a range of issues emerging from the interaction of Information Technologies and organizational systems. It contains a collection of research papers focusing on themes of growing interest in the field of Information Systems, Organization Studies, and Management. The book offers a multidisciplinary view on Information Systems aiming to disseminate academic knowledge. It might be particularly relevant to IT practitioners such as information systems managers, business managers and IT consultants. The volume is divided into six sections, each one focusing on a specific theme. The content of each section is based on a selection of the best papers (original double blind peer reviewed contributions) presented at the annual conference of the Italian chapter of AIS, which has been held in Rome, Italy in September 2012.**
