Current findings on the origins and effects of ageism, as well as ways to reduce it.

“Wow. This book totally rocks. It arrived on a day when I was in deep confusion and sadness about my age. Everything about it, from my invisibility to my neck. Within four or five wise, passionate pages, I had found insight, illumination, and inspiration. I never use the word empower, but this book has empowered me.” –Anne Lamott, New York Times bestselling author

Author, activist, and TED speaker Ashton Applewhite has written a rousing manifesto calling for an end to discrimination and prejudice on the basis of age. In our youth obsessed culture, we’re bombarded by media images and messages about the despairs and declines of our later years. Beauty and pharmaceutical companies work overtime to convince people to purchase products that will retain their youthful appearance and vitality. Wrinkles are embarrassing. Gray hair should be colored and bald heads covered with implants. Older minds and bodies are too frail to keep up with the pace of the modern working world and

olders should just step aside for the new generation. Ashton Applewhite once held these beliefs too until she realized where this prejudice comes from and the damage it does. Lively, funny, and deeply researched, *This Chair Rocks* traces her journey from apprehensive boomer to pro-aging radical, and in the process debunks myth after myth about late life. Explaining the roots of ageism in history and how it divides and debases, Applewhite examines how ageist stereotypes cripple the way our brains and bodies function, looks at ageism in the workplace and the bedroom, exposes the cost of the all-American myth of independence, critiques the portrayal of elders as burdens to society, describes what an all-age-friendly world would look like, and offers a rousing call to action. It's time to create a world of age equality by making discrimination on the basis of age as unacceptable as any other kind of bias. Whether you're older or hoping to get there, this book will shake you by the shoulders, cheer you up, make you mad, and change the way you see the rest of your life. Age pride!

Gender And Ageing: Changing Roles And Relationships

In Ecce Homo: Jesus the Man, Enrico Nicoló, MD, has created a critical reading of the New Testament that not only brings revolutionary discoveries as to how and why the text was written, but also unveils the true history of Jesus: the one integrated and concealed within the superficial story most are familiar with. Through sophisticated literary techniques, Nicoló delves into the literary and philological aspects of the writing of the Gospel to cement two objectives—the story and the history—into one narrative. It becomes both a beautiful story and a historical account, delivering a clear conclusion about the true human life of Jesus and his subjection to the

march of time. Ecce Homo—behold the man.

"But be doers of the word, and not hearers only." --James 1:22, nkjv
Doing What Jesus Did invites you to learn how to move into the supernatural realm that Jesus said in John 14:12-14 we could, and should, enter. Husband-and-wife authors John and Sonja Decker will equip you to minister in the way Jesus invited us to, including miracles, by teaching you His six essential strategies for effective discipleship: **◆ Leading people to Christ ◆ Leading Christians into the Holy Spirit baptism ◆ Learning how to heal the sick ◆ Hearing from God ◆ Healing the sick by revelation ◆ Dealing with demons** Much more than a handbook of New Testament principles, **Doing What Jesus Did** will be a catalyst for you to love Jesus more deeply as you minister His life, love, and power more dynamically.

What happens when a baby is born with “ambiguous” genitalia or a combination of “male” and “female” body parts? Clinicians and parents in these situations are confronted with complicated questions such as whether a girl can have XY chromosomes, or whether some penises are “too small” for a male sex assignment. Since the 1950s, standard treatment has involved determining a sex for these infants

and performing surgery to normalize the infant's genitalia. Over the past decade intersex advocates have mounted unprecedented challenges to treatment, offering alternative perspectives about the meaning and appropriate medical response to intersexuality and driving the field of those who treat intersex conditions into a deep crisis. Katrina Karkazis offers a nuanced, compassionate picture of these charged issues in *Fixing Sex*, the first book to examine contemporary controversies over the medical management of intersexuality in the United States from the multiple perspectives of those most intimately involved. Drawing extensively on interviews with adults with intersex conditions, parents, and physicians, Karkazis moves beyond the heated rhetoric to reveal the complex reality of how intersexuality is understood, treated, and experienced today. As she unravels the historical, technological, social, and political forces that have culminated in debates surrounding intersexuality, Karkazis exposes the contentious disagreements among theorists, physicians, intersex adults, activists, and parents—and all that those debates imply about gender and the changing landscape of intersex management. She argues that by viewing intersexuality exclusively

through a narrow medical lens we avoid much more difficult questions. Do gender atypical bodies require treatment? Should physicians intervene to control the “sex” of the body? As this illuminating book reveals, debates over treatment for intersexuality force reassessment of the seemingly natural connections between gender, biology, and the body.

Big History is a new field on a grand scale: it tells the story of the universe over time through a diverse range of disciplines that spans cosmology, physics, chemistry, astronomy, geology, evolutionary biology, anthropology, and archaeology, thereby reconciling traditional human history with environmental

geography and natural history. Weaving the myriad threads of evidence-based human knowledge into a master narrative that stretches from the beginning of the universe to the present, the Big History framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them. Teaching Big History is a powerful analytic and pedagogical resource, and serves as a comprehensive guide for teaching Big History, as well for sharing ideas about the subject and planning a curriculum around it. Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History. The book includes teaching materials, examples, and detailed sample exercises. This book is also an engaging first-hand account of how a group of professors built an entire Big History general education curriculum for first-year students, demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can

be transformative for professors and students alike.

Stereotyping and Prejudice Against Older Persons

The First 5 Steps

This volume of essays is concerned with the discrimination against older people that results from a failure to recognise their diversity. By considering the unique combinations of discrimination that arise from the interrelationship of age and gender, pensions, ethnicity, sexual orientation, socio-economic class and disability, the contributors demonstrate that the discrimination suffered is multiple in nature. It is the combination of these characteristics that leads to the need for more complex ways of tackling age discrimination.

Age Estimation: A Multidisciplinary Approach is the only reference in the field covering all techniques and methods involving age estimation from different perspectives in just one volume. The book provides comprehensive coverage of all aspects of age estimation: aging the living and the dead, human rights, and skeletal, dental, histological and biochemical techniques and methods available. Each chapter is written by internationally known expert contributors. Age Estimation: A Multidisciplinary Approach is a one of a kind resource for those involved in estimating the age of the living and the dead. Presents a concentration of all techniques and methods involving age estimation in a single volume Provides a multidisciplinary approach that lends itself to researchers, practitioners and students from a variety of different fields Includes contributions by world renowned forensic specialists The president of New York's Mount Sinai Hospital and a professor of public health present the findings of a MacArthur Foundation Study, showing healthy aging is dependent on diet, exercise, and self-esteem rather than on genes. The Secret Life of Real Estate
Songs and Chants. 3

Real estate is sold as a much safer investment than the constantly fluctuating stock market. Share price volatility is compared unfavourably with the steadier and impressive gains made from real estate which is, we are told, 'as safe as houses'. As millions of Americans – and countless others in the Western world - have recently found to their cost, house prices can also suddenly and dramatically drop. Yet no other text on real estate, either current or from the past, mentions this fact, reinforcing the perception that real estate is an almost risk-free investment. Now for the first time, and long overdue, a book that details and explains the cyclical nature of real estate. The latest real estate downturn in the USA (and in other countries) is just one of many that have occurred since 1800 with astonishing regularity. This book is the story of the American experience of those downturns: the move out of recession, how the banking system facilitates that move, the boom and the characters that shaped it, the bust and accompanying bank failures, and then the recession, or worse, depression. This is always followed by a new cycle repeating each phase again, varied only by the new ways bankers find to avoid the regulations put in place after each collapse to ensure it will never happen again. *The Secret Life of Real Estate and Banking* explains, quite

simply, how the real estate cycle originates, offers a fascinating study of US history to illustrate the stages through which each cycle passes, then explains why this cycle of boom and bust must repeat, given present economic conditions. Real estate can only be a truly winning investment if you know the cycle. For investors, the author has designed an 18-year Real Estate Clock which plots the progress of the cycle, with tell-tale signs so that investors can recognise exactly where they are in the cycle at any point in time and so help them decide whether to invest, sit tight or sell. He has refined this clock over a period of many years and those who have attended his courses have found it an invaluable and remarkably accurate guide for their investment strategies, not only in real estate. With its invaluable insights and practical guidance, *The Secret Life of Real Estate and Banking* is a book for both novice and experienced investors alike who want to know why the real estate cycle moves as it does, learn how this movement can be forecast well in advance, and more importantly, wish to learn how to profit from this knowledge. A must read for any serious investor.

"The World's Greatest Detective must try to inhabit the mind of a murder victim to solve a case-without filling the empty grave next to those of his parents. Can Batman imagine the life of a corpse with a half-eaten face without dying himself? A man was murdered and the Batman is in his head-and he knows how it happened. All he has to do now is survive his own deduction. Warren Ellis and Bryan Hitch, one of the most legendary creative partnerships of the modern age, reunite in this tale about life, death, and the

questions most are too afraid to ask."--

In this book, physical anthropologists, mathematical demographers, and statisticians tackle methodological issues for reconstructing demographic structure for skeletal samples. Topics discussed include how skeletal morphology is linked to chronological age, assessment of age from the skeleton, demographic models of mortality and their interpretation, and biostatistical approaches to age structure estimation from archaeological samples. This work will be of immense importance to anyone interested in paleodemography, including biological and physical anthropologists, demographers, geographers, evolutionary biologists, and statisticians.

The Need for Theory

From New York Times bestselling author Keri Arthur comes a brand-new series featuring heroine Emberly Pearson—a phoenix capable of taking on human form and cursed with the ability to foresee death.... Emberly has spent a good number of her many lives trying to save humans. So when her prophetic dreams reveal the death of Sam, a man she once loved, she does everything in her power to prevent it from

happening. But in saving his life, she gets more than she bargained for. Sam is working undercover for the Paranormal Investigations Team, and those who are trying to murder him are actually humans infected by a plaguelike virus, the Crimson Death—a by-product of a failed government experiment intended to identify the enzymes that make vampires immortal. Now all those infected must be eliminated. But when Emberly's boss is murdered and his irreplaceable research stolen, she needs to find the guilty party before she goes down in flames....

Age Estimation of the Human Skeleton is a needed up-to-date book providing anthropologists and anatomists with a broad spectrum of techniques focused on aging human skeletal remains. It represents the most current reference book devoted entirely to estimating age at death for skeletonized and decomposed human remains and is a convenient starting point for practical and research applications. This book is a valuable reference for all individuals interested in the identification or analysis of human remains including forensic anthropologists, bioarchaeologists, forensic odontologists, pathologists and anatomists at student and professional levels. Age Estimation of the Human Skeleton would serve as an ideal supplemental textbook for introductory and advanced osteology and forensic anthropology courses. Age Estimation of the Human Skeleton is a collection of some of the latest research in age estimation techniques of human skeletal remains. It compiles recent scientific research on age at death estimation using dental and gross skeletal morphological

indicators of age, as well as histological and multifactorial age estimation techniques. Age estimation methods from all life-stage categories, including: fetal, sub-adult, and adult are included in the book. Age Estimation of the Human Skeleton also includes chapters that evaluate and review the older, more traditional aging techniques as well as information that explores future directions and considerations for research in this area. Overall, Age Estimation of the Human Skeleton bolsters the references available to researchers in academic, laboratory, and medicolegal facilities and is an attractive text to a sizable spectrum of analysts.

Contributors use a feminist perspective to explore the impact of ageing on gender roles in the workplace and in retirement; in marital and other relationships; in community support networks and in older women's own perceptions. A range of research approaches are used, including qualitative studies giving a voice to older women. A concluding chapter draws out the implications of the book.

By adding consideration of age to that of race, gender, and

class, this innovative volume seeks to show how growing older affects literary creativity and psychological development and to examine how individual writing careers begin to change in middle age.

This book summarizes and explains the main approaches to age estimation in the living, defining when a parameter may be of use and raising awareness of its limitations. This text ensures that practitioners recognize when an assessment is beyond their area of expertise or beyond verification depending upon the clinical data available. Each key approach to age evaluation has been allotted a single chapter, written by an international leader in the particular field. The book also includes summary chapters that relay readily accessible data for use by the practitioner, and includes important “ageing milestones.” This book is indispensable where problems of immigration and legal standing, juvenile vs. adult criminal status, and responsibilities of law enforcement to protect vulnerable persons are key issues on a daily basis. Medical

practitioners, forensic practitioners such as pathology, odontology, anthropology and nursing, lawyers, and police would find this book incredibly useful.

A Manifesto Against Ageism

Connecting Gender and Ageing

This volume of original chapters is designed to bring attention to a neglected area of feminist scholarship - aging. After several decades of feminist studies we are now well informed of the complex ways that gender shapes the lives of women and men. Similarly, we know more about how gendered power relations interface with race and ethnicity, class and sexual

orientation. Serious theorizing of old age and age relations to gender represents the next frontier of feminist scholarship. In this volume, leading national and international feminist scholars of aging take first steps in this direction, illuminating how age relations interact with other social inequalities, particularly gender. In doing so, the authors challenge and transform feminist scholarship and many taken for granted concepts in gender studies. Let's face it: almost everyone fears growing older. We worry about losing our looks, our health, our jobs, our self-esteem—and being supplanted in work and love by younger people. It feels like the natural, inevitable consequence of the passing years, But what if it's not? What if nearly everything that we think of as the "natural" process of aging is anything but? In Agewise, renowned cultural critic Margaret Morganroth Gullette reveals that much of what we dread about aging is actually the result of ageism—which we can, and should, battle as strongly as we do racism, sexism, and other forms of bigotry. Drawing on provocative and under-reported evidence from biomedicine, literature, economics, and personal stories, Gullette probes the ageism that drives discontent with our bodies, our selves, and our accomplishments—and makes us easy prey for marketers who want to sell us an illusory vision of youthful perfection. Even worse, rampant ageism causes society to discount, and at times completely discard, the wisdom and experience acquired by people over the course of adulthood. The costs—both collective and personal—of this culture of decline are almost incalculable, diminishing our workforce, robbing younger people of hope

for a decent later life, and eroding the satisfactions and sense of productivity that should animate our later years. Once we open our eyes to the pervasiveness of ageism, however, we can begin to fight it—and Gullette lays out ambitious plans for the whole life course, from teaching children anti-ageism to fortifying the social safety nets, and thus finally making possible the real pleasures and opportunities promised by the new longevity. A bracing, controversial call to arms, Agewise will surprise, enlighten, and, perhaps most important, bring hope to readers of all ages.

How it Moves and why

What are the differences between the sexes? That is the question that Ann Oakley set out to answer in this pioneering study, now established as a classic in the field. To answer it she draws on the evidence of biology, anthropology, sociology and the study of animal behaviour to cut through popular myths and reach the underlying truth. She demonstrates conclusively that men and women are not two separate groups: rather each individual takes his or her place on a continuous scale. She shows how different societies define masculinity and femininity in different and even opposite ways, and discusses how far observable differences are based on biology and psychology and how far on cultural conditioning. Many books have discussed these vital issues. None, however, have drawn on such an impressively wide range of evidence or discussed it with such clarity and authority. Now newly reissued with a substantial introduction which highlights its continuing relevance, this work will continue to inform and shape

dialogues around sex and gender for a new generation of scholars and students.

Offering a new framework for nonprofit brand management, this book presents the Brand IDEA (Integrity, Democracy, and Affinity). The framework eschews traditional, outdated brand tenets of control and competition largely adopted from the private sector, in favor of a strategic approach centered on the mission and based on a participatory process, shared values, and the development of key partnerships. The results are nonprofit brands that create organizational cohesion and generate trust in order to build capacity and drive social impact. The book explores in detail how nonprofit organizations worldwide are developing and implementing new ways of thinking about and managing their organizational brands.

This text emphasizes changing gender roles and relationships, gender identity and an examination of masculinities in midlife and later life. It covers the need to reconceptualize partnership status, in order to understand the implications of both widowhood and divorce for older women and men.

"The Need for Theory speaks to the burgeoning need for critical thinking in social gerontology. The editors have brought together some of the foremost contributors to theoretical advances in the field. This volume incorporates state-of-the-art theorizing with a focus on selected topical areas facing gerontologists around the world. Using their keen insights into substantive issues, the contributors examine personal and structural changes affecting individuals over the life course. Extolling the heed for

theory is not enough; the contributors focus their insights on a panoply of substantive issues, linking the personal with the political and with the structural parameters that shape the process of aging, no matter where it occurs.
