Emotionally Focused Family Therapy is the definitive manual for applying the effectiveness of emotionally focused therapy (EFT) to the complexities of family life. The book sets out a theoretical framework for mental health professionals to enhance their conceptualization of family dynamics, considering a broad range of presenting problems and family groups. The first section applies EFT theory and principles to the practice of family therapy. The second section explicates the process of EFT and examines the interventions associated with the EFT approach to families. In the final section, the authors provide case examples of emotionally focused family therapy (EFFT) practice, with chapters on traumatic loss, stepfamilies, externalizing disorders, and internalizing disorders. Integrating up-to-date research with clinical transcripts and case examples throughout, Emotionally Focused Family Therapy is a must-read for therapists looking to promote the development and renewal of family relationships using the principles of EFT.

In psychotherapy, as in life, all significant emotions are embedded in important stories, and all significant stories revolve around important emotional themes. Yet, despite the interaction between emotion and narrative processes, emotion-focused therapy (EFT) and narrative-informed therapies have evolved as separate clinical approaches. In this book, Lynne Angus and Leslie Greenberg address this gap and present a groundbreaking, empirically based model that integrates working with narrative and emotion processes in EFT. According to Angus and Greenberg's narrative-informed approach to EFT, all successful psychotherapy entails the articulation, revision, and deconstruction of clients' maladaptive life stories in favor of more life-enhancing alternatives. Because emotions and narratives interact to form meaning and sense of self, the evocation and articulation of emotions is critical to changing life narratives. Individual chapters describe how the interaction between emotion and narrative creates a constantly evolving sense of self; how clinicians can address both narrative and emotion processes to help clients create more adaptive, empowering meanings and sense of self, and the importance of a strong therapeutic alliance. Engaging, in-depth case studies at the end of the book illustrate how the model can be applied to treatment of depression and emotional trauma.

Key Ingredients of Change

Emotion-Focused Therapy provides an introduction to the theory, history, research, and practice of this emotion-centered, humanistic approach to psychotherapy. Emotion-focused therapy is a complete theory of human functioning based on the adaptive role of emotion and founded on the idea that emotional change is central to enduring change. This theory emphasizes the awareness, acceptance, understanding, and transformation of emotion, and proposes that emotions themselves have an adaptive potential that, if activated, can help clients to change. Emotion-focused therapists help clients to experience their emotions in the safe setting of therapy so that, rather than avoiding or controlling their feelings, clients learn to use them as a guide to what is important or necessary in their lives. In this book, Leslie S. Greenberg presents and explores this versatile and useful approach, its theory, history, therapy process, primary change mechanisms, the empirical basis for its effectiveness, and recent developments that have refined the theory and expanded how it may be practiced. This revised edition includes a wealth of recent research findings on important constructs such as emotional needs, as well as new developments in the use of emotion-focused therapy in treating anxiety disorders.

Since its original publication in 1996, this volume has been a helpful guide to therapists in the practice of emotionally focused therapy. This second edition addresses the many changes in the field of couples therapy, including updated research results linked to clinical intervention and new information on using EFT to address depression and PTSD. A new section covers the growth of couples therapy as a field and its overall relevance to the mental health field, accompanied by coverage of how recent research into the nature of marital distress is consonant with EFT. Other new features are a section on EFT and feminism, as well as a section on cultural competence for the EFT therapist. Written by a leading authority on emotionally focused couples and marital therapy, this second edition is an up-to-date reference on all aspects of EFT and its uses for mental health professionals.

This book will help practitioners overcome one of the leading challenges in couples therapy: working effectively with the male partner. Men have unique needs and psychological issues that many clinicians may not recognize or know how to address. This volume presents chapters by the leading practitioners associated with current therapeutic models, including Emotionally Focused Couple Therapy, Imago Relationship Therapy, Integrated Behavioral Couple Therapy, and more. Using in-depth case examples, they demonstrate how their approaches can be adapted to be "male-sensitive" and respond to the ambivalence so many men experience about couples work. Special topics are also addressed, including infidelity, cultural diversity, working with veterans, and fathering issues. This book will enrich therapists' work with couples, making treatment a welcoming experience for both partners and the treatment process more gratifying for the therapist.

"Whoever does not love does not know God, because God is love."--1 John 4:8 Are you looking to enrich a healthy relationship, revitalize a tired one, or rescue one gone awry? Do you yearn to grow closer to God, and to further incorporate Him and His teachings into your marriage? We all want a lifetime of love, support, and faith. But sometimes we need a little help. Enter Dr. Sue Johnson, developer of Emotionally Focused Therapy (EFT) and "the best couple therapist in the world," according to bestselling relationship expert Dr. John Gottman. In CREATED FOR CONNECTION, Dr. Johnson and Kenneth Sanderfer, a leading EFT practitioner in the Christian community, share Johnson's groundbreaking and remarkably successful program for creating stronger, more secure relationships not only between partners, but between us and God. The message of CREATED FOR CONNECTION is simple: Forget about learning how to argue better, analyzing your early childhood, or making grand romantic gestures. Instead, get to the emotional underpinnings of your relationship by recognizing that you are attached to and dependent on your partner in much the same way that a child is on a parent, and we are on the Heavenly Father, for nurturing, soothing, and protection. The way to enhance or save our relationships with each other and with God is to be open, attuned, responsive, and to reestablish safe emotional connection. Filled with Bible verses, inspiring real-life stories, and guidance, CREATED FOR CONNECTION will ensure a lifetime of love.

Heralded by the New York Times and Time as the couples therapy with the highest rate of success, Emotionally Focused Therapy works because it views the love relationship as an attachment bond. This idea, once controversial, is now supported by science, and has become widely popular among therapists around the world. In Hold Me Tight, Dr. Sue Johnson presents Emotionally Focused Therapy to the general public for the first time. Johnson teaches that the way to save and enrich a relationship is to reestablish safe emotional connection and preserve the attachment bond. With this in mind, she focuses on key moments in a relationship -- from "Recognizing the Demon Dialogue" to "Revisiting a Rocky Moment" -- and uses them as touch points for seven healing conversations. Through case studies from her practice, illuminating advice, and practical exercises, couples will learn how to nurture their relationships and ensure a lifetime of love.

The second edition of this newly updated workbook is intended for use with couples who want to enhance their emotional connection or overcome their relationship distress. Incorporating new developments in EFT, the book includes chapters that explore concepts such as attachment bonds, the three cycles of relationship distress and more.

Over the past thirty years, groundbreaking studies on the relationships of couples have identified precisely what intimate partners must do in order to have successful partnerships.

This workbook is intended for use with couples who want to enhance their emotional connection or overcome their relationship distress. It is recommended for use with couples pursuing Emotionally Focused Therapy (EFT). It closely follows the course of treatment and is designed so that clinicians can easily integrate guided reading and reflections into the therapeutic process. The material is presented in a recurring format: Read, Reflect, and Discuss. Readings help couples look at their relationship through an attachment lens, walking them through the step-by-step process of creating a secure relationship bond. 33 Reflections invite readers to engage with the material personally, expanding their own awareness and ability to tune into their partner. Discussion sections suggest relationship-building exercises and a framework for conversations that promote safety, disclosure, and engagement. Case examples, along with informative illustrations, are scattered throughout the book to validate, illustrate, and inspire couples along their journey. Clinicians conversant with EFT can use this workbook to extend the effectiveness of their work with couples by giving them structured tasks to work on between sessions. For clinicians training in EFT, the book can guide them in staying focused on the EFT roadmap and illuminate how important change events unfold.

From best-selling author, Susan M. Johnson, with over 1 million books sold worldwide! This essential text from the leading authority on Emotionally Focused Therapy, Susan M. Johnson, and colleague, T. Leanne Campbell, apply the key interventions of EFT to work with individuals, providing an overview and clinical guide to treating clients with depression, anxiety, and traumatic stress. Designed for therapists at all levels of expertise, Johnson and Campbell focus on introducing clinicians to EFFT interventions, techniques, and change processes in a highly accessible and practical format. The book begins by summarizing attachment theory and science – the theoretical basis of this model – together with the experiential approach to change in psychotherapy. Chapters describe the three stages of EFFT, macro-interventions, such as the EFFT Tango, and various micro-interventions through clinical exercises, case studies, and transcripts to demonstrate this model in practice with individuals, highlighting the unique benefits of EFT as a cross-modality approach for treating emotional disorders. With exercises interwoven throughout the text, this book is built to accompany in-person and online training, helping the practicing clinician offer targeted and empirically tested interventions that not only alleviate symptoms of distress but expand the client's emotional balance, agency, and sense of self. As the next major extension of the EFT approach, this book will appeal to therapists already working with couples and families as well as those just beginning their professional journey. Psychotherapists, psychologists, counselors, social workers, and mental health workers will also find this book invaluable.

"If couples therapy is to produce real transformation, authors Leslie S. Greenberg and Rhonda N. Goldman argue, the process must be hot: Emotion must be activated. Emotion fuels conflicts; therefore, therapists need to help couples get at the primary emotions that power negative interactional cycles and transform these emotions into more adaptive, functional ones. In Emotion-focused couples therapy: The dynamics of emotion, love, and power, Greenberg and Goldman explore the foundations of emotion-focused couples therapy (EFT-C) and expand its framework to focus more intently on the development of the self and relationships. The authors show how EFT-C can promote soothing and help clients deal with unmet needs from adulthood and childhood. They discuss the affect regulation involved in three major motivational systems central to couples therapy--attachment, identity, and attraction--and clarify the role of emotions and motivations in the dominance dimension of couples interactions. Written with practitioners and graduate students in mind, the chapters present a rich variety of case material to demonstrate how working with emotions can facilitate change in couples and, by extension, in all situations in which people may be in emotional conflict with others. Greenberg and Goldman provide the tools needed to identify specific emotions and show the reader how to work with them to resolve conflict and promote bonding in couples therapy"--Jacket. This book shows how forgiveness oriented Emotion-Focused Therapy (EFT) helps individuals and couples process distressing negative emotions and transform them by accessing internal resources of strength and self compassion. Many individuals and couples come to therapy because of unresolved feelings of anger and hurt due to experiences of being wronged, betrayed, or violated. Over the past 20 years, Leslie Greenberg and his colleagues have undertaken clinical research to articulate a model of emotional injury resolution and map out a therapy-assisted path to forgiveness. This book offers step-by-step guides for conducting EFT and EFT for couples (EFT-C), along with analyses of extensive clinical case material, that show readers how to: -promote clients' ownership of their emotional experience -empower clients to appropriately assign responsibility for harm done -help clients see themselves as having the personal resources and resilience to recover from the emotional injury Therapists will also learn to help clients determine whether forgiveness--with or without reconciliation with the injurer--is the right path, or whether it may be enough to simply let go of negative feelings.

Most traditional couple therapy models are based on the Eurocentric, middle-class value system and are not effective for today's psychotherapists working in multicultural settings. The editors and a culturally diverse group of contributors follow a common outline of topics across chapters, related to theory, research, practice, and training. They report on the application of major evidence-based models of couple therapy and demonstrate the integral role played by contextually based values involved in relationships, conflict, and resolution. This volume will be of enormous interest and value to the growing number of people qualified both in the established and the new training societies for analysts and therapists, or studying to enter them. Within it theory and practice are closely interwoven, demonstrating how theories and models emerge, both from the study of earlier pioneering publications and from day to day experience, and are tested time and time again in the process of a group of practitioners accepting them as viable. An impressive and creative blend of the characteristics which this profession demands of its practitioners is in evidence here, combining originality with passion for their subject and the flexibility required to develop their own pattern of thought.'In the practice of modern analytical psychology it has become of central importance to reorganise, analyse and interpret projections and introjections of many sorts, the patient's transference, the analyst's counter-transference, and the dialectical interaction between the two, which is descriptively termed transference/counter-transference. Transference and counter-transference evoke each other; the patient's gradual acceptance of the analysis of those processes and his growing consciousness of the way they influence his relationships are facilitated by the analyst who can successfully blend his knowledge of archetypal forces, images and symbols with his experience of developmental factors.' Judith Hubback, from the Introduction.

Emotionally Focused Couple Therapy (EFT; Johnson, 2004) is an empirically validated approach to couple therapy that uses attachment theory to understand the needs and emotions of romantic partners. In EFT, relationship distress is conceptualized as resulting from negative affect, emotional disconnection, and unmet attachment needs. Although EFT is recognized as one of the most researched and effective approaches to couple therapy, little research has examined theoretically related characteristics of couples to changes in marital satisfaction throughout EFT. The present doctoral thesis examined this area of literature. Thirty-two couples were provided approximately 21 sessions of EFT. The goal of the first study was to identify intake characteristics related to change in marital satisfaction over the course of EFT. Couples completed self-report measures of marital satisfaction, attachment security, relationship trust, and emotional control at pre- and post-therapy and after each therapy session. Individuals higher on self-report attachment anxiety and higher levels of emotional control had greater change in marital satisfaction over the course of EFT. The goal of the second study was to examine intake levels of attachment security and its relationship to the occurrence of the blamer-softening event, a key change event in EFT, and changes in marital satisfaction. Results indicated that the occurrence of a blamer-softening event significantly predicted positive changes in marital satisfaction. Results also suggested that the occurrence of a softening event significantly moderated the relationship between attachment avoidance at intake and change in marital satisfaction from pre- to post-therapy. For couples who completed a blamer-softening event, partners with lower levels of attachment avoidance were more likely to have positive changes in marital satisfaction. However, this relationship was not evident for attachment anxiety. Overall, results from this thesis suggest that attachment security is a key characteristic of couple partners for therapists to consider when implementing EFT. Therapists may benefit from assessing attachment security at the start of therapy to help inform them of the emotion regulating strategies used by couple partners. This information may help therapists to tailor specific interventions such that couples may begin to develop more secure attachment bonds.

Written by a leading authority on emotionally focused couples and marital therapy, this book is an up-to-date reference on all aspects of EFT and its uses for mental health professionals. This book addresses the many changes in the field of couples therapy, including updated research results linked to clinical intervention and new information on using EFT to address depression and PTSD. A new section covers the growth of couples therapy as a field and its overall relevance to the mental health field, accompanied by coverage of how recent research into the nature of marital distress is consonant with EFT. Other new features are a section on EFT and feminism, as well as a section on cultural competence for the EFT therapist.
