the Author Dr. Christopher Coughlin is the EMS Program Director for Glendale Community College in Glendale, Arizona. Dr. Coughlin has been an NREMT paramedic since 1985 and is one of the first 850 nationally certified flight paramedics (FP-C) in the United States. Dr. Coughlin earned his AAS in Advanced Emergency Medical Technology from Glendale Community College; his B.A. in Adult Education from Ottawa University, Phoenix, Arizona; his M.Ed. in Educational Leadership from Northern Arizona University, Flagstaff, Arizona, and his Ph.D. in Professional Studies from Capella University, Minneapolis, Minnesota.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest do not survive reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to every community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States, identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve the response to cardiac arrest from sudden cardiac arrest across the United States.

John Norman has updated his best-selling book, a guide for the firefighter and fire officer who, having learned the basic mechanics of the trade, are looking for specific information on specific situations. In this new fourth edition, readers will find a new chapter on lightweight construction, a new chapter on electrical fires and emergencies, updates on fire safety, and including such topics as wind-driven fires, and many new illustrations.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Emergency medical service providers serve as the primary immediate response to emergencies of all kinds, including natural disasters and acts of terrorism in the United States, with states serving as the regulatory agencies responsible for training, scope of practice, and continuing education for potential and working EMS providers. This text serves as a comprehensive guide to individuals in training to become emergency medical service providers and complements Emergency Medical Technician (EMT) and Emergency Medical Responder (EMR) courses as the primary classroom text consistent with National EMS Curriculum Standards and other industry guidelines. Each chapter addresses a relevant organ system and its physiology, methods of assessment, treatment recommendations, along with a case study to illustrate the topics at hand. So much of what is involved in emergency medical services is based on practical and applicable knowledge of situations, and these case studies will provide students with exposure to the field work they will be responding to. Written with the context of COVID-19 implications in mind, this is first EMT text of its kind produced after the onset of the pandemic, with considerations and citations from national and international emergency medicine journals to incorporate guidelines and best-practices in light of shifting conditions and expectations.

250 questions, answers, and rationales will help you understand where you need to focus prior to taking the actual certification exam. Practice questions come with a study guide that explains how multiple choice questions are constructed as well as advice and insider tips for passing the NREMT Paramedic exam.

Updated to the new National EMS Education Standards and endorsed by the American Academy of Orthopaedic Surgeons, the fifth edition of our core first responder textbook, Emergency Medical Responder, continues to take an assessment-based approach to emergency medical responder training. Designed to meet the needs of law enforcement personnel, fire fighters, rescue squad personnel, athletic trainers, college students, and laypersons, the text and features found in the fifth edition will help students take the next step toward becoming outstanding Emergency Medical Responders.

Instructor USB available through our CST website" or contact @ joe@customizedsafetytraining.com This book is a multiuse book that functions as an EMR textbook, Resource, and Study Manual. We had the vision to think in new and challenging ways to create a concise, easily comprehensible, and organized book which truly meets the needs of today's Emergency Medical Responder (EMR). We have used several different EMR books first responder in the education of EMR's and none has measured up to what the Essentials for the Emergency Medical Responder 2nd Edition can provide. This book stresses all the domains of learning. The cognitive domain is addressed through the acquisition of knowledge in an easy to understand the narrative. The psychomotor domain is emphasized through a detailed description of skills. The affective domain is an essential theme of this textbook by emphasizing "Dare to Care". This book emphasizes and gives you a foundation to acquire the critical thinking skills necessary to provide the most meaningful care to the patient. We discuss the "why" of patient care so you can better understand the reasons for the care you give in order to make the necessary decisions. The knowledge you gain from this book is a solid stepping stone to move to advanced levels of EMS. It is a valuable resource and study manual for taking written and psychomotor advanced certification examinations. It is also a stepping stone for you to incorporate these skills and knowledge base in any other area of health care you choose, whether career or volunteer. The Essentials for the EMR 2nd Edition, meets and exceeds the current National EMS Education Standards, as presented by The National Highway and Traffic Administration, The National Registry of EMT's (NREMT) and local and state requirements for the proficiency of the EMR.
