by C.T. Walsh in
1979. The Walsh

book was based on
the course taught by
W.P. Jencks and R.H.

1960's and 1970's. By
the late 1970's, much
more could be
included about the
structures of enzymes
and the kinetics and
mechanisms of

enzymatic reactions themselves, and less emphasis was placed on chemical models. Walshs book was widely used in courses on enzymatic mechanisms for many years. Much has happened in the field of mechanistic enzymology in the past 15 to 20 years. Walshs book is both

out-of-date and out-of-focus in today's world of enzymatic mechanisms. There is no longer a single volume or a small collection of volumes to which students can be directed to obtain a clear understanding of the state of knowledge regarding the chemical mechanisms by which

biological reactions.

There is no single
volume to which

than ten years, and
several, including

Walsh, have
considered
undertaking to
modernize Walshs
book. However, these
good intentions have
been abandoned for
one reason or
another. The great
size of the knowledge
base in mechanistic
enzymology has been

a deterrent. It seems too large a subject for a single author, and it is difficult for several authors to coordinate their work to mutual satisfaction. This text by Perry A. Frey and Adrian D. Hegeman accomplishes this feat, producing the long-awaited replacement for Walshs classic text.

jigs and commercially available fixtures also appear to guide readers in developing their understanding of how design principles, as well as the latest design and manufacturing technologies, are being applied in the construction of jigs and fixtures today. As in past editions, heavy

emphasis is placed on the economics of jigs and fixtures, including methods and formulas for use in estimating workholder costs. A solid background in industrial processes, as well as machine shop technology, is assumed. Important Notice: Media content referenced within the product description or
