The Influential Product Manager teaches product managers how to behave at each stage of the product life cycle to achieve the best outcome for the customer. This comprehensive entry-level textbook distills over twenty years of hard-won field experience and industry knowledge into lessons that will empower new product managers to act like pros right out of the gate. This book provides basic knowledge and skills for non-dental healthcare practitioners, helping them recognize the importance of oral health, perform initial oral health assessments, consult dentists when necessary, and offer preventive advice and counseling. As people age, they tend to refrain from routine dental care, while the number of consultations with non-dental healthcare providers (physicians, nurses, pharmacists, physician assistants, physical therapists, occupational therapists etc.) increases. However, few healthcare providers are adequately trained to assess oral problems. The relevance of this book is underscored by the recently published European policy recommendations on oral health in older adults by the European College of Gerodontology and the European Geriatric Medicine Society, which highlight the importance of the active involvement of non-dental primary care practitioners in oral health assessment and promotion. These two respected European Societies have identified a significant gap in education, practice and health policies and described the necessary action plans. This book helps to fill the educational gap identified in the recommendations and will be an invaluable tool for all healthcare providers working with older people.

It is becoming increasingly challenging for product development leaders to effectively lead as workplace demands continue to increase. The rate of change in technology, society, and business places immense pressure on leaders to ensure their groups move in the direction of their goals. What might have worked in the past no longer works. Organizational surveys show that firms struggle with leadership. Product development leaders routinely complain of burnout and stress while their teams members complain of workplace dissatisfaction, resulting in organizational underperformance. The lack of evidence-based leadership literature for product development leaders means that many leaders are left to figure things out with little guidance. They do not have a reliable resource that they can refer to when they face leadership challenges and, as a result, struggle during times of crisis and change. This book addresses this challenge by providing a theory-informed set of techniques for product development leaders. Becoming a Leader in Product Development provides an evidence-base set of practices for product development leaders. In doing so, it explores what leadership is and the leader's role in the leadership process, the impact of national culture and organizational culture on the leadership process, and the need for product development leaders to practice adaptive and servant leadership, followership, and self-care. The underlying theories for each topic are reviewed and then brought to life through stories and examples. What You Will Learn See the difference between authority, persuasion, and influence and how leaders can use these constructs to benefit their organizations Gain the skills for practicing servant and adaptive leadership in your organization Examine the blind spots of each leadership theory Discover the importance of adapting leader behavior to the national culture and organizational culture where you find yourself Who This Book Is For Product development leaders (starting with product development managers) who want to go beyond leadership anecdotes to evidence-based leadership practice. A complete product manager will have a 360-degree understanding of user experience and how to craft beautiful products that are easy-to-use, with the end user in mind. You'll continue your journey with a walk through basic UX principles and even go through the process of building a simple set of UI frames for a mock app. Aside from the technical and design expertise, a PM needs to master the social aspects of the role. Develop a more systematic, human-centered, results-oriented thought process Design Thinking is the Product Development and Management Association's (PDMA) guide to better problem solving and decision-making in product development and beyond. The second in the New Product Development Essentials series, this book shows you how to bridge the gap between the strategic importance of design and the tactical approach of design thinking. Integrating high-level discussion with practical, actionable strategy, this book helps you re-tool your thought processes in a way that translates well beyond product development, giving you a new way to approach business strategy and more. This book shows you how to adopt these techniques and train your brain to see the answer to any question, at any level, in any stage of the development process. Become a better problem-solver in every aspect of business Connect strategy with practice in the context of product development Systematically map out your new product, service, or business Experiment with new thought processes and decision making strategies You can't rely on old ways of thinking to produce the newest, most cutting-edge solutions. Whereas the use of infonnation technology in the past decade has been concentrated primarily on business and public administration, in future the suppliers of infonnation technology will develop an increasing number of applications for the private household (see fig. 1). Traditional perspective: New perspective: 'IT-solutions for the "IT-solutions for the company" private household' ~ \..... \..... \..... \..... \..... \..... \\\\ Fig. 1. New perspective on information technology This development has already generated considerable market dynamics. Latest forecasts for the USA suggest that by 1996 at the latest the private household will present greater sales potential for home computers than business and public administration. VI Preface Up to now the use of infonnation technology in the private household has not been regarded as highly significant by either business or science, even though PCs have become widespread in the private sphere. In the ESPRIT framework there have been individual projects dealing with home networks, and in a number of Asian and European countries, as well as America, experiments with interactive television are taking place. Internet and commercial online services are experiencing rapid growth. This application area for infonnation technology in the private household, which is generating increasing business attention, must also be the subject of appropriate research activities.
