Human activity during the Anthropocene has transformed landscapes worldwide on a scale that rivals or exceeds even the largest of natural forces. Landscape ecology has emerged as a science to investigate the interactions between natural and anthropogenic landscapes and ecological processes across a wide range of scales and systems: from the effects of habitat or resource distributions on the individual movements, gene flow, and population dynamics of plants and animals; to the human alteration of landscapes affecting the structure of biological communities and the functioning of entire ecosystems; to the sustainable management of natural resources and the ecosystem goods and services upon which society depends. This novel and comprehensive text presents the principles, theory, methods, and applications of landscape ecology in an engaging and accessible format that is supplemented by numerous examples and case studies from a variety of systems, including freshwater and marine "scapes".

*World Regional Geography: The New Global Order provides a geographical study of world issues through analysis of nine world regions and the countries in each. Political, demographic, economic, cultural, and environmental themes are developed in their geographic, spatial, context. The first two chapters of the text consider geographic approaches to studies of the 21st Century world and the geographic principles that underpin world regional geography. The book is organized to emphasize the comparisons among world regions and the interdependent relationships that are increasing through globalization. At the same time, the processes of localization are continuing to focus attention on local regions within countries and the desire of their peoples for a degree of autonomy. The organization of the regional chapters (3-11) and the inclusion of comparable diagrams and maps within each chapter reinforce the comparative aspect. Instructors and students will have access to PowerWeb, a course-specific website developed with the help of instructors teaching the course to provide you and your students with curriculum-based materials, updated weekly assessments, informative and timely world news, refereed web links, and much more.

Filled with the rich diversity of human life, yet exceptionally concise, World Regional Geography Concepts humanizes geographic issues by representing the daily lives of women, men, and children in the various regions of the globe. As in their more comprehensive text, World Regional Geography, Lydia and Alex Pulsipher make global patterns of trade and consumption meaningful for students by showing how these patterns affect environments and people at the local level. And at around 450 pages, it remains the ideal length for covering all of the world's regions in one semester.
