A noted psychologist researches the make-up of love, citing three main ingredients--intimacy, passion, and commitment--that determine the success of a relationship and offers guidelines for enhancing personal relationships
In the outpouring of books on education in the last decade, none has been more important than Paul Willis' Learning to Labor, The unique contribution of this book is that it shows, with glittering clarity, how the rebellion of poor and working class kids against school authority prepares them for working class jobs. No American interested in education or in labor can afford not to read and study this book carefully. --Stanley Aranovitz
One of the most groundbreaking sociology texts of the 20th century, Howard S. Becker's Outsiders revolutionized the study of social deviance. Howard S. Becker's Outsiders broke new ground in the early 1960s--and the ideas it proposed and problems it raised are still argued about and inspiring research internationally. In this new edition, Becker includes two lengthy essays, unpublished until now, that add fresh material for thought and discussion. "Why Was Outsiders a Hit? Why Is It Still a Hit?" explains the historical background that made the book interesting to a new generation coming of age in the 60s and makes it of continuing interest today. "Why I Should Get No Credit For Legalizing Marijuana" examines the road to decriminalization and presents new ideas for the sociological study of public opinion.

This comprehensive guide to emotional intelligence (EI) is a state-of-the-art collection of proven best practices from the field's best and brightest minds. Edited by educational leaders Maurice Elias and Harriett Arnold, this guide creates a new gold standard for bringing social-emotional learning into every classroom.

Outsiders

A revolutionary new study of the origins of love based on physiological research probes the human brain for insights into the origins of the sex drive, romance, and attraction, while also offering practical advice on how to control and channel these desires into healthy pursuits. Reprint. 60,000 first printing.
The Highly Sensitive Brain is the first handbook to cover the science, measurement, and clinical discussion of sensory processing sensitivity (SPS), a trait associated with enhanced reponsivity, awareness, depth-of-processing and attunement to the environment and other individuals. Grounded in theoretical models of high sensitivity, this volume discusses the assessment of SPS in children and adults, as well as its health and social outcomes. This edition also synthesizes up-to-date research on the biological mechanisms associated with high sensitivity, such as its neural and genetic basis. It also discusses clinical issues related to SPS and seemingly-related disorders such as misophonia, a hyper-sensitivity to specific sounds. In addition, to practical assessment of SPS embedded throughout this volume is discussion of the biological basis of SPS, exploring why this trait exists and persists in humans and other species. The Highly Sensitive Brain is a useful handbook and may be of special interest to clinicians, physicians, health-care workers, educators, and researchers. Presents a neurobiological perspective of sensory processing sensitivity (SPS) Provides assessment criteria and measurement tools for highly sensitive children and adults Discusses the health and social outcomes of being highly sensitive in children and adults Examines clinical issues related to high sensitivity Offers practical applications and a future vision for integrating high sensitivity in our society
Do you fall in love hard, but fear intimacy? Are you sick of being told that you are "too sensitive"? Do you struggle to respect a less-sensitive partner? Or have you given up on love, afraid of being too sensitive or shy to endure its wounds? Statistics show that 50 percent of what determines divorce is genetic temperament. And, if you are one of the 20 percent of people who are born highly sensitive, the risk of an unhappy relationship is especially high. Your finely tuned nervous system, which picks up on subtleties and reflects deeply, would be a romantic asset if both you and your partner understood you better. But without that understanding, your sensitivity is likely to be making your close relationships painful and complicated. Based on Elaine N. Aron's groundbreaking research on temperament and intimacy, The Highly Sensitive Person in Love offers practical help for highly sensitive people seeking happier, healthier romantic relationships. From low-stress fighting to sensitive sexuality, the book offers a wealth of practical advice on making the most of all personality combinations. Complete with illuminating self-tests and the results of the first survey ever done on sex and temperament, The Highly Sensitive Person in Love will help you discover a better way of living and loving.

A historical investigation into the practice of psychiatric medicine in the western world chronicles its evolution, offering insight into how diagnoses and treatments changed throughout time and how modern social and political attitudes toward mental illness have developed, in a collection of philosophical lectures. Reprint. 15,000 first printing

Which sort of seducer could you be? Siren? Rake? Cold Coquette? Star? Comedian? Charismatic? Or Saint? This book will show you which. Charm, persuasion, the ability to create illusions: these are some of the many dazzling gifts of the Seducer, the compelling figure who is able to manipulate, mislead and give pleasure all at once. When raised to the level of art, seduction, an indirect and subtle form of power, has toppled empires, won elections and enslaved great minds. In this beautiful, sensually designed book, Greene unearths the two sides of seduction: the characters and the process. Discover who you, or your pursuer, most resembles. Learn, too, the pitfalls of the anti-Seducer. Immerse yourself in the twenty-four manoeuvres and strategies of the seductive process, the ritual by which a seducer gains mastery over their target. Understand how to 'Choose the Right Victim', 'Appear to Be an Object of Desire' and 'Confuse Desire and Reality'. In addition, Greene provides instruction on how to identify victims by type. Each fascinating character and each cunning tactic demonstrates a fundamental truth about who we are, and the targets we've become - or hope to win over. The Art of Seduction is an indispensable primer on the essence of one of history's greatest weapons and the ultimate power trip. From the internationally bestselling author of The 48 Laws of Power, Mastery, and The 33 Strategies Of War.

A leading neuroscientist and pioneer in the study of mindfulness explains why addictions are so tenacious and how we can learn to conquer them We are all vulnerable to addiction. Whether it's a compulsion to constantly check social media, binge eating, smoking, excessive drinking, or any other behaviors, we may find ourselves uncontrolled and overcome? Is there a key to conquering the cravings we know are unhealthy for us? This book provides groundbreaking answers to the most important questions about addiction. Dr. Judson Brewer, a psychiatrist and neuroscientist who has studied the science of addictions for twenty years, reveals how we can tap into the very processes that drive addiction. He describes the mechanisms of habit and addiction formation, then explains how the practice of mindfulness can interrupt these habits. Weaving together patient stories, his own experience with mindfulness practice, and current scientific findings from his own lab and others, Dr. Brewer offers a path for moving beyond our craving. Professor Richard Wiseman offers many quick and practical ways to improve your life gleaned from today's cutting edge-science, and in the process gives a psychologist's myth-busting response to the self-help movement. Whether you're looking to be more decisive in your life, to find a new job, or simply to be happier, the chances are that the help industry has failed the public, often promoting exercises that destroy motivation, ruin relationships, increase anxiety and reduce creativity. Here, psychologist Richard Wiseman exposes these modern-day mind myths and presents a fresh approach to change that helps people achieve their aims and ambitions in minutes not months. From resilience to relationships, Wiseman outlines the research supporting this new science of rapid change and describes how these quirky techniques can be incorporated into everyday life. • Find out why putting a pencil between your teeth instantly makes you feel happier • Discover why even thinking about going to the gym can help you keep your wallet will improve the chance of it being returned if lost • Discover why writing down your goals is more effective than visualizing them • Find out why retail therapy doesn't work to improve mood and what does

Elaine Aron follows up her bestsellers on the highly sensitive person with a groundbreaking new book on the undervalued self. She explains that self-esteem results from having a healthy balance of love and power in our lives. Readers will learn to incorporate love into situations that seem to require power and deal with power struggles that are common in the workplace. The Undervalued Self also discusses how to deal with the negative effects of the secret life of the brain, her strategies will enable us to escape feelings of shame, defeat, and depression; dissolve relationship hostility; and become our best selves. With Aron's clear, empathetic writing and extraordinary scientific and human insight, The Undervalued Self is a simple and effective guide to developing healthy, fulfilling relationships, a

Erik H. Erikson's way of looking at things has contributed significantly to the understanding of human development and the nature of man. This collection of his writings reflects the evolution of his ideas over the course of 50 years, beginning with his earliest experiences in psychoanalysis in Vienna. The papers cover a wide spectrum of topics, from children's play and child psychoanalysis to the dreams of adults, cross-cultural observations, young adulthood and the life cycle. The text also contains reminiscences about colleagues such as Anna Freud and Ruth Benedict who played important roles in Erikson's life and work.

Preminent psychologist Lisa Barrett lays out how the brain constructs emotions in a way that could revolutionize psychology, health care, the legal system, and our understanding of the human mind. "Fascinating . . . A thought-provoking journey into emotion science."—The Wall Street Journal "A singular book, remarkable for the freshness of its ideas and the boldness and clarity with which they are presented."—Scientific American "A brilliant and original book on the science of emotion, by the deepest thinker about this topic since Darwin."—Daniel Gilbert, best-selling author of Stumbling on Happiness The science of emotion is in the midst of a revolution on par with the discovery of relativity in physics and natural selection in biology. Leading the charge is psychologist and neuroscientist Lisa Feldman Barrett, whose research overturns the long-standing belief that emotions are automatic, universal, and hardwired in different brain regions. Instead, Barrett shows, we construct each instance of emotion through a unique interplay of brain, body, and culture. A lucid report from the cutting edge of emotion science, How Emotions Are Made reveals the profound real-world consequences of this breakthrough for neuroscience and medicine to the legal system and even national security, laying bare the immense implications of our latest and most intimate scientific revolution.

This first book in Castells' groundbreaking trilogy, with a substantial new preface, highlights the economic and social dynamics of the information age and shows how the network society has now fully risen on a global scale. Groundbreaking volume on the impact of the age of information on all aspects of society Includes coverage of the influence of the internet and the net-economy Describes the accelerating pace of innovation and social transformation Based on research in the USA, Asia, Latin America, and Europe

Understanding Statistics
This new edition of his critically acclaimed book, Jon Elster examines the nature of social behavior, proposing choice as the central concept of the social sciences. Extensively revised throughout, the book offers an overview of key explanatory mechanisms, drawing on many case studies and experiments to explore the nature of explanation in the social sciences; an analysis of the mental states - beliefs, desires, and emotions - that are precursors to action; a systematic comparison of rational-choice models of behavior with alternative accounts, and a review of mechanisms of social interaction ranging from strategic behavior to collective decision making. A wholly new chapter includes an exploration of classical moralists and Prust in charting mental mechanisms operating behind the back of the agent, and a new conclusion points to the pitfalls and fallacies in current ways of doing social science, and proposes guidelines for more modest and more robust theories.

The classic text that defined the field, Psychology and Life, Fifteenth Edition, celebrates Phil Zimbardo's 30th anniversary as its author by returning to its original themes: presenting psychology as a science and as a tool to understanding our daily lives. The book continues to provide a rigorous, research-centered survey of the discipline while offering students features and pedagogy that will spark their interest and excite their imaginations.

Emphasizing meaning and concepts, not just symbols and numbers Statistics for Psychology, 6th edition places definitional formulas center stage to emphasize the logic behind statistics and discourage rote memorization. Each procedure is explained in a direct, concise language and both verbally and numerically. MyStatLab is an integral part of the Statistics course. MyStatLab gives students practice with hundreds of homework problems. Every problem includes tools to help students understand and solve each problem -- and grades all of the problems for instructors. MyStatLab also includes tests, quizzes, eText, a Gradebook, a customizable study plan, and much more. Learning Goals Upon completing this book, readers should be able to: Know both definitional and numerical formulas and how to apply them Understand the logic behind each formula Expose students to the latest thinking in statistical theory and application Prepare students to read research articles Learn how to use SPSS Note: This is the standalone book if you want the bookAccess card please order the ISBN below: 0205924174 / 9780205924172 Statistics for Psychology Plus NEW MyStatLab with eText -- Access Card Package Package consists of: 0205258158 / 9780205258154 Statistics for Psychology 0205923860 / 9780205923861 New MyStatLab for Social Sciences with Pearson eText -- ValuePack Access Card

What is the use of social theory to historians, and of history tosocial theorists? In clear and energetic prose, a pre-eminentcultural historian here offers a far-reaching response to thesedeceptively simple questions. In this classic text, now revised andupdated in its second edition, Peter Burke reviews afresh therelationship between the field of history and the social sciencesand their tentative convergence in recent decades. Burke first examines what uses historians have made - or mightmake - of the models, methods, and concepts of the social sciences, and then analyzes some of the intellectual conflicts, such as theopposition between structure and human agency, which are theheart of the tension between history and social theory. Throughout,he draws from a broad range of cultures and periods to illustratetheohistory, in turn, has been used to create and validate socialtheories. This new edition brings the book up to date with theaddition of examples and discussions of new topics such as socialcapital, globalization and post-colonialism. The second edition of History and Social Theory will continue tostimulate both students and scholars across a range of disciplineswith its challenging assessment of the roles of history and socialscience today.

Banish your fears of statistical analysis using this clearlywritten and highly successful textbook. Statistics forVeterinary and Animal Science Third Edition is an introductorytext which assumes no previous knowledge of statistics. Itstarts with very basic methodology and builds on it to encompassome of the more advanced techniques that are currently used. This book will enable you to handle numerical data and criticallyappraise the veterinary and animal science literature. Written in anon-mathematical way, the emphasis is on understanding theunderlying concepts and correctly interpreting computer output, andnot on working through mathematical formulae. Key features: Flow charts are provided to enable you to choose the correctstatistical analyses in different situations Numerous real worked examples are included to help you masterthe procedures Two statistical packages, SPSS and Stata, are used to analysedata to familiarise you with typical computer output The data sets from the examples in the book are available aselectronic files to download from the book's companionwebsite in ASCII, Excel, SPSS, Stata and RWorkspace formats, allowing you to practice using your ownsoftware and fully get to grips with the techniques A clear indication is provided of the more advanced or obscuretopics so that, if desired, you can skip them without loss ofcontinuity. New to this edition: New chapter on reporting guidelines relevant to veterinarymedicine as a ready reference for those wanting to follow bestpractice in planning and writing up research New chapter on critical appraisal of randomized controlledtrials and observational studies in the published literature: atemplate is provided which is used to critically appraise twopapers New chapter introducing specialist topics: ethical issues ofanimal investigations, spatial statistics, veterinary surveillance, and statistics in molecular and quantitative genetics Expanded glossaries of notation and terms Additional exercises and further explanations added throughoutto make the book more comprehensive. Carrying out statistical procedures and interpreting the resultsis an integral part of veterinary and animal science. This is theonly book on statistics that is specifically written for veterinarianscience and animal science students, researchers andpractitioners.

Inspired by the real psychology study popularized by the New York Times and its "Modern Love" column, this contemporary YA is perfect for fans of Eleanor and Park. Two random strangers. Two secrets. Thirty-six questions to make them fall in love. Hildy and Paul each have their own reasons for joining the university psychology study that asks the simple question: Can love be engineered? The study consists of 36 questions, ranging from "What is your most terrible memory?" to "When did you last sing to yourself?" By the time Hildy and Paul have made it to the end of the questionnaire, they've laughed and cried and lied and thrown things and run away and come back and driven each other almost crazy. They've also each discovered the painful secret the other was trying so hard to hide. But have they fallen in love? Told in the language of modern romance -- texting, Q&A, IM -- and punctuated by Paul's sketches, this clever high-concept YA is full of humor and heart. As soon as you've finished reading, you'll be searching for your own stranger to ask the 36 questions. Maybe you'll even fall in love. Rights have sold in 19 territories!

Tests of significance have been a key tool in the research kit of behavioral scientists for nearly fifty years, but their widespread and uncritical use has recently led to a rising volume of controversy about their usefulness. This book gathers the central papers in this continuing debate, brings the issues into clear focus, points out practical problems and philosophical pitfalls involved in using the tests, and provides a benchmark from which further analysis can proceed.The papers deal with some of the basic philosophy of science, mathematical and statistical assumptions connected with significance tests and the problems of the interpretation of test results, but the work is essentially non-technical in its emphasis. The collection succeeds in raising a variety of questions about the value of the tests; taken together, the questions present a strong case for vital reform in test use, if not for their total abandonment in research.The book is designed for practicing researchers-those not extensively trained in mathematics and statistics that must nevertheless regularly decide if and how tests of significance are to be used-and for those training for research. While controversy has been centered in sociology and psychology, and the book will be especially useful to researchers and students in those fields, its importance is great across the spectrum of the scientific disciplines in which statistical procedures are essential-notably political science, economics, and the other social sciences, education, and many biological fields as well.Denton E. Morrison is professor, Department of Sociology, Michigan State University.Ramon E. Henkel is associate professor emeritus, Department of Sociology University of Maryland. He teaches as part of the graduate faculty.

NOTE: Before purchasing, check with your instructor to ensure you select the correct ISBN. Several versions of Pearson's MyLab & Mastering products exist for each title, and registrations are not transferable. To register for and use Pearson's MyLab & Mastering products, you may also need a Course ID, which your instructor will provide. Used books, rentals, and purchases made outside of Pearson If purchasing or renting from companies other than Pearson, the access codes for Pearson's MyLab & Mastering products may not be included, may be incorrect, or may be previously redeemed. Check with the seller before completing your purchase. Discovering the Lifespan provides a broad overview of the field of human development and features a strong balance of research and application. In a unique departure from traditional lifespan development texts, each chapter is divided into three modules, and in turn, each module is divided into several smaller sections. Consequently, students encounter material in smaller, more manageable chunks that optimize learning.

"A brilliant work . . . A dazzling meditation on the very nature of language itself" from the world-renowned scholar and author of The Poetry of Thought (Kirkus Reviews). In his classic work, literary critic and scholar George Steiner tackles what he considers the Babel "problem": Why, over the course of history, have humans developed thousands of different languages when the social, material, and economic advantages of a single tongue are obvious? Steiner argues that different cultures' desires for privacy and exclusivity led to each developing its own language. Translation, he believes, is at the very heart of human communication, and thus at the heart of human nature. From our everyday perception of the world around us, to creativity and the uninhibited imagination, to the often inexplicable poignancy of poetry, we are constantly translating—even from our native language.
