Edition is the gold-standard in
physical examination
textbooks. This new edition
reflects the latest in what is
happening in nursing today
with coverage of emerging
trends, examples of how to
document patient
assessments using the
Electronic Health Record, and**

new evidence-informed content throughout. It's easy to see why this text is #1 with Canadian nursing students! A two-column format distinguishes normal findings from abnormal findings, and uses colour, step-by-step photos to clarify examination techniques and expected findings. Sectional colour bars segment body systems according to content (Structure and Function, Subjective Data, Objective Data, Documentation and Critical Thinking, Abnormal Findings). Summary checklists offer reviews of key

examination steps.

Documentation and Critical Thinking sections provide real world clinical examples of specific patients and how to document assessment findings. Abnormal findings tables help you recognize, sort, and describe abnormalities. Separate chapter on Pregnancy provides a thorough foundation for assessing the pregnant patient.

Developmental Considerations sections highlight content specific to infants, children, adolescents, pregnant women, and older adults. Promoting

Health boxes focus on this key aspect of Canadian health care. NEW! Content covering the Electronic Health Record, charting, and narrative recording provides examples of how to document assessment findings.

UPDATED Case Studies provide you with opportunities to test and develop your analytical skills and apply what you've learned. NEW!

Approximately 150 normal and abnormal examination photos for the nose, mouth, throat, thorax, and pediatric assessment gives you a fresh perspective on these key

Leading investigators
synthesize the entire
laboratory and clinical

process of developing anticancer drugs to create a single indispensable reference that covers all the steps from the identification of cancer-specific targets to phase III clinical trials.

These expert authors provide their best guidance on a wide variety of issues, including clinical trial design, preclinical screening, and the development and validation of bioanalytic methods. The chapters on identifying agents to test in phase III trials and on trial design for the approval of new

anticancer agents offer a unique roadmap for moving an agent to NDA submission. The automotive lubricants arena has undergone significant changes since the first edition of this book was published in 1996.

Environmental concerns, particularly regarding improvement of air quality have been important in recent years. Reduced emissions are directly related to changes in lubricant specifications and quality, and the second edition of the Automotive Lubricants Reference Book

reflects the urgency of such matters by including updated and expanded detail. This second edition also considers the recent phenomenon of increased consolidation within the oil and petroleum additive arenas, which has resulted in fewer people for research, development, and implementation, along with fewer competing companies. After reviewing the first edition the authors have fully reviewed and updated the information to fit in with the changes in technology and markets. Chapters

include Introduction and
Fundamentals Constituents
of Modern Lubricants
Crankcase Oil Testing
Crankcase Oil Quality Levels
and Formulations Practical
Experiences with Lubricant
Problems Performance
Levels, Classification,
Specification, and Approval
of Engine Lubricants. Other
Lubricants for Road Vehicles
Other Specialized Oils of
Interest Blending, Storage,
Purchase, and Use Safety
Health, and the
Environment The Future.
The aim of this major
reference work is to provide

a first point of entry to the literature for the researchers in any field relating to structural integrity in the form of a definitive research/reference tool which links the various sub-disciplines that comprise the whole of structural integrity. Special emphasis will be given to the interaction between mechanics and materials and structural integrity applications. Because of the interdisciplinary and applied nature of the work, it will be of interest to mechanical engineers and materials

scientists from both academic and industrial backgrounds including bioengineering, interface engineering and nanotechnology. The scope of this work encompasses, but is not restricted to: fracture mechanics, fatigue, creep, materials, dynamics, environmental degradation, numerical methods, failure mechanisms and damage mechanics, interfacial fracture and nanotechnology, structural analysis, surface behaviour and heart valves. The structures under

consideration include:
pressure vessels and piping,
off-shore structures, gas
installations and pipelines,
chemical plants, aircraft,
railways, bridges, plates and
shells, electronic circuits,
interfaces, nanotechnology,
artificial organs, biomaterial
prostheses, cast structures,
mining... and more. Case
studies will form an integral
part of the work.

Guide

Apoptosis and Cancer is an up-to-date overview of our understanding of apoptosis and how it effects cancer development and cancer treatment. Written by leading researchers in the field of apoptosis, this book provides an extremely valuable reference for those already familiar with apoptosis as well as a jumping-off point for those new to the field. It will appeal to scientists interested in mechanisms of cell transformation

that lead to cancer and to oncologists interested in investigating and understanding new cancer therapies. Experimental tests were performed on the OH-58A helicopter main-rotor transmission in the NASA Lewis 500-hp Helicopter Transmission Test Stand. The testing was part of a joint Navy/NASA/Army lubrication program to develop a separate lubricant for gearboxes that would improve life and load-carrying capacity. The goal of the experiments was to develop a testing procedure using a MIL-L-23699 base reference oil to fail certain transmission components, and then to run identical tests with improved lubricants and demonstrate improved performance. The tests were directed at failing components that have given the Navy problems because of marginal lubrication.

These failures included mast-shaft bearing micropitting, sun gear and planet bearing fatigue, and spiral bevel gear scoring. More than 900 hr of total run time were accumulated for these tests. Some success was achieved in developing a testing procedure to produce sun gear and planet bearing fatigue failures. Only marginal success was achieved in producing mast-shaft bearing micropitting and spiral bevel gear scoring.

Statistical Power Analysis is a nontechnical guide to power analysis in research planning that provides users of applied statistics with the tools they need for more effective analysis. The Second Edition includes:

- * a chapter covering power analysis in set correlation and multivariate methods;
- * a chapter considering
