“Dean Nelson is one of the best interviewers around.” —Anne Lamott From respected journalist, professor, and founder of the Writer's Symposium by the Sea, an indispensable guide to the subtle art of the interview guaranteed to afford readers with the skills and confidence they need the next time they say, "talk to me." Interviewing is the single most important way journalists (and doctors, lawyers, social workers, teachers, human resources staff, and, really, all of us) get information. Yet to many, the perfect interview feels more like luck than skill—a rare confluence of rapport, topic, and timing. But the thing is, great interviews aren’t the result of serendipity and intuition, but rather the result of careful planning and good journalistic habits. And Dean Nelson is here to show you how to nail the perfect interview every time. Drawing on forty-years of award-winning journalism and his experience as the founder and host of the Writer’s Symposium by the Sea, Nelson walks readers through each step of the journey from deciding whom to interview and structuring questions, to the nitty gritty of how to use a recording device and effective note-taking strategies, to the ethical dilemmas of interviewing people you love (and loathe). He also includes case studies of famous interviews to show readers how these principles play out in real time. Chock full of comprehensive, time-tested, gold-standard advice, Talk to Me is a book that demystifies the art and science of interviewing, in the vein of On Writing Well or How to Read Literature Like a Professor.

This book is about coding interview questions from software and Internet companies. It covers five key factors which determine performance of candidates: (1) the basics of programming languages, data structures and algorithms, (2) approaches to writing code with high quality, (3) tips to solve difficult problems, (4) methods to optimize code, (5) soft skills required in interviews. The basics of languages, algorithms and data structures are discussed as well as questions that explore how to write robust solutions after breaking down problems into manageable pieces. It also includes examples to focus on modeling and creative problem solving. Interview questions from the most popular companies in the IT industry are taken as examples to illustrate the five factors above. Besides solutions, it contains detailed analysis, how interviewers evaluate solutions, as well as why they like or dislike them. The author makes clever use of the fact that interviewees will have limited time to program meaningful solutions which in turn, limits the options an interviewer has. So the author covers those bases. Readers will improve their interview performance after reading this book. It will be beneficial for them even after they get offers, because its topics, such as approaches to analyzing difficult problems, writing robust code and optimizing, are all essential for high-performing coders.

This book documents the results of a multi-year project that investigated the goals for writing improvement among 45 students and their instructors in intensive courses of English as a Second Language (ESL) then, a year later, in academic programs at two Canadian universities. The researchers present a detailed framework to describe these goals from the perspectives of the students as well as their instructors. The goals are analyzed for groups of students from particular backgrounds internationally, for changes over time, and in relation to the ESL and academic courses. The authors use activity theory, goal theory, various sociolinguistic concepts, and multiple data sources (interviews, observations, stimulated recalls, questionnaires, and text analyses) to provide a contextually-grounded perspective on learning, teaching, writing, second-language development, and curriculum policy. The book will interest researchers, educators, and administrators of ESL, university, college, and literacy programs around the world.

This book provides guidance to researchers about how to develop interview skills that align with their theoretical assumptions. Connecting "theory" and "method" can be challenging for novice researchers. Interviewing: A Guide to Theory and Practice draws from, and extends, the author?s earlier 2010 book, and focuses on three interrelated issues, how researchers: theorize research interviews; examine their subject positions in relation to projects and participants; and explore the details of interview interaction to inform practice. By developing these understandings of qualitative interview practice, Kathryn Roulston shows how researchers can design and conduct quality research projects that draw on a wide range of interview practices to provide audience members and communities with significant findings concerning social problems.

This volume, edited by Grace Veach, explores leading approaches to foregrounding information literacy in first-year college writing courses. Chapters describe cross-disciplinary efforts underway across higher education, as well as innovative approaches of both writing professors and librarians in the classroom. This seminal work unpacks the disciplinary implications for information literacy and writing studies as they encounter one another in theory and practice, during a time when "fact" or "truth" is less important than fitting a predetermined message. Topics include reading and writing through the lens of information literacy, curriculum design, specific writing tasks, transfer, and assessment.
