<http://www.epubli.de/shop/buch/53894>"The spatiotemporal conjunction is a fundamental aspect of the juridical reflection on the historicity of law. Despite the fact that it seems to represent an issue directly connected with the question of where legal history is heading today, it still has not been the object of a focused inquiry. Against this background, the book 's proposal consists in

rethinking key confluences related to this problem in order to provide coordinates for a collective understanding and dialogue. The aim of this volume, however, is not to offer abstract methodological considerations, but rather to rely both on concrete studies, out of which a reflection on this conjunction emerges, as well as on the reconstruction of certain research lines featuring a spatiotemporal component. This analytical approach makes a contribution by providing some suggestions for the employment of space and time as coordinates for legal history. Indeed, contrary

to those historiographical attitudes reflecting a monistic conception of space and time (as well as a Eurocentric approach), the book emphasises the need for a delocalized global perspective. In general terms, the essays collected in this book intend to take into account the multiplicity of the spatiotemporal confines, the flexibility of those instruments that serve to create chronologies and scenarios, as well as certain processes of adaptation of law to different times and into different spaces. The spatiotemporal dynamism enables historians not only to detect new perspectives and

dimensions in foregone themes, but also to achieve new and compelling interpretations of legal history. As far as the relationship between space and law is concerned, the book analyses experiences in which space operates as a determining factor of law, e.g. in terms of a field of action for law. Moreover, it outlines the attempted scales of spatiality in order to develop legal historical research. With reference to the connection between time and law, the volume sketches the possibility of considering the factor of time, not just as a descriptive tool, but as an ascriptive moment (quasi

an inner feature) of a legal problem, thus making it possible to appreciate the synchronic aspects of the 'juridical experience'. As a whole, the volume aims to present spatiotemporality as a challenge for legal history. Indeed, reassessing the value of the spatiotemporal coordinates for legal history implies thinking through both the thematic and methodological boundaries of the discipline."

underlies economic, sociological, psychological, and legal thinking about human action. Hence, the notion of a reasoning criminal--one who employs the same sorts of cognitive strategies when contemplating offending as they and the rest of us use when making other decisions--might seem a small contribution to crime control. This conclusion would be mistaken. This volume develops an alternative approach, termed the "rational choice perspective," to explain criminal behavior. Instead of emphasizing the differences between criminals and non-criminals, it stresses some of the similarities. In particular, while the contributors do not deny the existence of irrational and pathological components in crimes, they suggest that the rational aspects of offending should be explored. While recognizing the crucial influence of situational factors, the rational choice perspective provides a framework within which to incorporate and locate existing theories about crime. In doing so it also provides both a new agenda for research and sheds a fresh light on deterrent and prevention policies.

Since the very beginnings of the digital humanities, Papyrology has been in the vanguard of the application of information technologies to its own scientific purposes, for both theoretical and practical reasons (the strong awareness towards the problems of human memory and the material ways of preserving it; the need to work with a multifarious and overwhelming amount of different data). After more than thirty years of

development, we have now at our disposal the most advanced tools to make papyrological studies more and more effective, and even to create a new conception of "papyrology" and a new model of "edition" of the ancient documents. At this turning point, it is important to build an epistemological framework including all the different expressions of Digital Papyrology, to trace a historical sketch setting the background of the contemporary tools, and to provide a clear overview of the current theoretical and technological trends, so that all the possibilities currently available can be exploited following uniform pathways. The volume represents an innovative attempt to deal with such topics, usually relegated into very quick and general treatments within journal articles or papyrological handbooks.

some people able to promote their own psychological growth and change toward complexity while others not? Is it possible to propose simple methodologies and instruments that would allow selection of positive experiences and hence develop a stronger and richer Self? This book describes the way to promote and foster positive psychological growth in everyday life, through simple instruments accessible to anyone. Positive psychological experience The focal point of the approach is the concept of Flow of Consciousness, an experience of subjective psychological wellbeing that nourishes and complexifies the Self. The authors propose a wide overview of positive psychological experience considering individual characteristics and experiences, as well as the influence of context, culture and social relationship, and the effects of the immersion in a globalized world, like the

In the first two chapters the authors describe the impact of positive psychological experience in social and individual life. In the following chapters the reader discovers, accompanied by the exposition of concrete research results, the specific characteristics that may promote flow experience in several field of experience: the use of communication technology; the experience of social-networks; clinical settings and Psychotherapy; the

You'll learn how to fetch and display data and handle user input with Angular reactive forms and front-end and

back-end validators for maximum effect. Later, you will perform advanced debugging and explore the unit testing features provided by xUnit.net (.NET 5) and Jasmine, as well as Karma for Angular. After adding authentication and authorization to your apps, you will explore progressive web applications (PWAs), learning about their technical requirements, testing, and converting SWAs to PWAs. By the end of this book, you will understand how to tie together the front end and back end to build and deploy secure and robust web applications. What you will learn

Implement a web API interface with ASP.NET Core and consume it with Angular using RxJS observables
Set up an SQL database server using a local instance or a cloud data store
Perform C# and

concept and shape of the "digital critical edition" of ancient documents. First of all, there is the need of representing any textual and paratextual feature as much as possible, and of encoding them in a semantic markup that is very different from a traditional critical edition, based on the mere display of information. Moreover, several new tools allow us to reconsider not only the linguistic dimension of the ancient texts (from exploiting the potentialities of linguistic annotation to a full consideration of language variation as a key to socio-cultural analysis), but also the very concept of philological variation (replacing the mono-authorial view of an reconstructed archetype with a

The contributors, experts in the application of digital strategies to the papyrological research, face these issues from their own viewpoints, not without glimpses on parallel fields like Egyptology and Near Eastern studies. The result is a new, original and cross-disciplinary overview of a key issue in the digital humanities. increased in the social sciences and yet there is still relatively little published material in the field that seeks to understand the development of climate change as a perceived social problem. This book contributes to filling this gap by theoretically linking the study of the historical development of social perceptions about 'nature' and climate change with the figurational sociology of Norbert Elias and the study of moral panics. By focusing sociological theory on climate change, this book situates the issue within the broader context of the

In the process, the author not only proposes a new approach to moral panics research, but makes a fundamental contribution to the development of figuration sociology and the understanding of how climate change has developed as a social problem, with significant implications regarding how to improve the efficacy of climate change

learning. But how exactly do we learn to be a person through living? In this book, Peter Jarvis draws together all the aspects of becoming a person into the framework of learning. Considering the ongoing, "nature versus nurture" debate over how we become people, Jarvis's study of nurture - what learning is primarily about - builds on a detailed recognition of our genetic inheritance and evolutionary reality. It demonstrates the ways in which we become social human beings:
internalising,

accommodating and rejecting the culture to which we are exposed (both primarily and through electronic mediation) while growing and developing as human beings and people. As learning theory moves away from traditional, single-discipline approaches it is possible to place the person at the centre of all thinking about learning, by emphasising a multi-disciplinary approach. This wide-ranging study draws on established research from a number of disciplines
