Assessment and Intervention for Executive Function Difficulties

Executive Function in Preschool-age Children

This groundbreaking book offers a comprehensive theory of executive functioning (EF) with important clinical implications. Synthesizing cutting-edge neuropsychological and evolutionary research, Russell A. Barkley presents a model of EF that is rooted in meaningful activities of daily life. He describes how abilities such as emotion regulation, self-motivation, planning, and working memory enable people to pursue both personal and collective goals that are critical to survival. Key stages of EF development are identified and the far-reaching individual and social costs of EF deficits detailed. Barkley explains specific ways that his model may support much-needed advances in assessment and treatment. See also Barkley's empirically based, ecologically valid assessment tools: Barkley Deficits in Executive Functioning Scale (BDEFS for Adults) and Barkley Deficits in Executive Functioning Scale--Children and Adolescents (BDEFS-CA).

Executive dysfunction occurs in many clinical conditions and has significant impact on multiple facets of life. This book summarizes executive function and dysfunction for practitioners, researchers and educators, covering lifespan development, assessment, impact and interventions. Drawing together clinical, neurobiological and developmental viewpoints, the authors summarize the latest research findings in practical and applied terms, and review conceptual approaches to assessing and identifying executive function and dysfunction. Several chapters are devoted to practical aspects of executive dysfunction, including research-based treatment strategies, educational implications, forensic cautions and intervention resources. Executive dysfunction in ADHD, LD, MR, autism, mood disorders, epilepsy, cancer and TBI is covered, with test performance, neuroimaging and clinical presentation for these clinical conditions. The book concludes with anticipation of future work in the field. This is a key reference for medical, psychological and educational professionals who work with children, adolescents and young adults in clinical and educational settings.

More than 100,000 school practitioners and teachers (K-12) have benefited from the step-by-step guidelines and practical tools in this influential go-to resource, now revised and expanded with six new chapters. The third edition presents effective ways to assess students' strengths and weaknesses, create supportive instructional environments, and promote specific skills, such as organization, time management, sustained attention, and emotional control. Strategies for individualized and classwide intervention are illustrated with vivid examples and sample scripts. In a large-size format for easy photocopying, the book includes 38 reproducible forms and handouts. Purchasers get access to a Web page where they can download and print the reproducible materials. New to This Edition *Chapter with guidance and caveats for developing individual education programs (IEPs), 504 Plans, and multi-tiered systems of support (MTSS). *Chapters on working with students with attention-deficit/hyperactivity disorder (ADHD) and autism spectrum disorder. *Three guest-authored chapters describing exemplary schoolwide applications. *More student centered--provides a template for involving children in intervention decision making. *Fully updated with the latest developments in the field. This book is in The Guilford Practical Intervention in the Schools Series, edited by Sandra M. Chafouleas.

How do K-12 students become self-regulated learners who actively deploy comprehension strategies to make meaning from texts? This cutting-edge guide is the first book to highlight the importance of executive skills for improving reading comprehension. Chapters review the research base for particular executive functions--such as planning, organization, cognitive flexibility, and impulse control--and present practical skills-building strategies for the classroom. Detailed examples show what each skill looks like in real readers, and sidebars draw explicit connections to the Common Core State Standards (CCSS). Reproducible planning and assessment forms can be downloaded and printed in a convenient 8 1/2" x 11" size.

Executive Functions in Children's Everyday Lives captures the diversity and complexity of the executive system that underlies children's everyday life experiences. Acquisition of executive functions, such as interpreting communication cues and the perspectives of others, is foundational to and a function of children's early social and communicative competencies. From the soccer field to the classroom, executive functions support children's strategic thinking and control of their environment. Knowing about executive functions and how this system of cognitive resources emerges in young children is important in understanding children's development. Recent research points to the importance of also considering environmental influences on the executive system. This book is unique in its focus on how experiences in children's early lives influence and are influenced by executive functions. Viewing executive functions through this broad lens is critical for professionals who intervene when children's access to executive functions is less than optimal. This book addresses a wide range of topics, including the neurological basis of executive functions in young children, the assessment of children's executive functions, theoretical and historical conceptions of executive functions, the relations between executive functions and theory of mind, multilingualism, early school transitions, and the relationship of executive functions to Autism and ADHD. This volume will be useful to professionals in applied psychology, undergraduate and graduate students, and social science and applied researchers.

In this book, top scientists from a variety of fields investigate the development of executive function (EF), a term that encompasses a range of mental processes that together regulate our social behavior and our cognitive and emotional well-being.
