Soils and sediments influence current processes, preserve evidence of past processes, indicate evolutionary phases in landscapes and provide a basis for relative and absolute chronologies. They provide an important key to the integration of short-term process studies and investigation of longer-term landform evolution. This book, first published in 1985, has been arranged to provide wide temporal and spatial coverage,

with studies ranging from historic to geologic time scales and micro- to macro-spatial scales. The interdisciplinary nature of the subject is reflected in contributions from soil scientists, engineering geologists, hydrologists and geomorphologists.

"The signature undertaking of the Twenty-Second Edition was clarifying the QC practices necessary to perform the methods in this manual.

During the British Mandate for Palestine (1922-1948), Arabs and Jews repeatedly used the law to gain leverage and influence international opinion, especially in three dramatic and largely forgotten trials involving two issues: the interplay between conflicting British promises to the Arabs and Jews during World War I, and the parties' rights and

claims to the Wailing Wall. Focusing on how all three parties - Arab, Jewish, and British - used the law and the legal process to advance their objectives during the Mandate years, this volume reveals how the parties availed themselves - with varying degrees of success - of the law and the legal process. The book examines various legal arguments they proffered, and how that early tendency to resort to the law as a tool, a resource, and a weapon in the conflict has continued to this day. The research relies almost entirely on primary source documents, including

transcripts of the public and secret testimony before the Shaw, Lofgren, and Peel Commissions, diaries, letters, government files, and other original sources. This study explores the origins of many of the fundamental legal arguments in the Arab-Israeli conflict that prevail to this day. Filling a gap in research, this is a key text for scholars and students interested in the Arab-Israeli conflict, Lawfare, and the Middle East.

Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved

Interest in permanent magnet synchronous

machines (PMSMs) is continuously increasing worldwide, especially with the increased use of renewable energy and the electrification of transports. This book contains the successful submissions of fifteen papers to a Special Issue of Energies on the subject area of “Permanent Magnet Synchronous Machines”. The focus is on permanent magnet synchronous machines and the electrical systems they are connected to. The presented work represents a wide range of areas. Studies of control

systems, both for permanent magnet synchronous machines and for brushless DC motors, are presented and experimentally verified. Design studies of generators for wind power, wave power and hydro power are presented. Finite element method simulations and analytical design methods are used. The presented studies represent several of the different research fields on permanent magnet machines and electric drives.
