*For a brief explosive period in the mid-1970s, the young and the unemployed of Italy’s cities joined the workers in an unexpectedly militant movement known simply as Autonomy (Autonomia). Its “politics of refusal” united its opponents behind draconian measures more severe than any seen since the war. Nanni Balestrini, the poet of youth rebellion, himself a victim of that repression, has invented a remarkable fictional form to express the hopes and conflicts of the movement. In spare but vivid prose, The Unseen follows Autonomy’s trajectory through the eyes of a single working-class protagonist—from high-school rebellion, squatting and attempts to set up a free radio station to arrest and the brutalities of imprisonment. This is a powerful and gripping novel: a rare evocation of the intensity of commitment, the passion of politics.*

*The fascinating story of a century-old automobile dynasty Fiat is one of the world's largest automakers, but when it made headlines by grabbing control of a bankrupt Chrysler in 2009 it was unknown in the U.S. Fiat's against-all-odds swoop on*

*Chrysler---masterminded by Sergio Marchionne, the Houdini-like manager who saved Fiat from its own near-collapse in 2005 – has made the automaker one of the most unlikely winners of the financial crisis. Mondo Agnelli is a new book that looks at the chain of unpredictable events triggered by the death of Gianni Agnelli in 2003. Gianni, the charismatic, silver-haired power broker and style icon, was the patriarch who had lead the company founded by his grandfather in 1899. But Gianni's own son had committed suicide. Without a mature heir, the dynasty and Fiat were rudderless. Backed by Gianni's closest advisors, his serious, shy, and determined grandson John plucked Marchionne from obscurity. Together, they saved the family company and, inadvertently, positioned Fiat as a global trailblazer when the global storm hit. A classic story of ingenuity and hard work, the book portrays a business dynasty that triumphed over adversity and family tragedy because of its own smarts, sweat, and ability to bend the rules A an engaging tale for those interested in the stories behind the economic crash, the book contains never-before reported material about how Fiat succeeded in making Chrysler profitable where both Daimler AG and Cerberus, its previous owners, had failed. A story for a wide audience, from car buffs, business readers, lovers of Italy, and anyone fascinated by the lifestyle of Europe's most glamorous industrial dynasty, this book tells the tale of how Fiat achieved the seemingly impossible -- turning around an American automotive icon everyone else had given up for dead.*

*Road Vehicle Dynamics supplies students and technicians working in industry with both the theoretical background of mechanical and automotive engineering, and the know-how needed to perform numerical simulations. Bringing together the foundations of the discipline and its recent developments in a single text, the book is structured in three parts: it begins with a historical overview of road vehicles; then deals with the forces exchanged between the vehicle and the road, and the vehicle and the air; and finally, deals with the dynamic behavior of the vehicle in normal driving conditions with some extensions towards conditions encountered in high-speed racing. Coverage of contemporary automatic controls is included in this edition.*

*An empirically supported proposal for synthesizing multiple approaches to the study of the mind in the past. In The Foundations of Cognitive Archaeology, Marc Abramiuk proposes a multidisciplinary basis for the study of the mind in the past, arguing that archaeology and the cognitive sciences have much to offer one another. Abramiuk draws on relevant topics from philosophy, biological anthropology, cognitive psychology, cognitive anthropology, and archaeology to establish theoretically founded and empirically substantiated principles of a discipline that integrates different approaches to mind-related archaeological research. Abramiuk discusses the two ways that archaeologists have traditionally viewed the human mind: as a universal or as a relative interface with the environment. He argues that neither view by itself can satisfactorily serve as a basis for gleaning insight into all aspects of the mind in the past and, therefore, the mind is more appropriately studied using multiple approaches. He explains the rationale for using these approaches in mind-related archaeological research, reviewing the literature in both cognitive psychology and cognitive anthropology on human memory, perception, and reasoning. Drawing on archaeological and genetic evidence, Abramiuk investigates the evolution of the mind through the Upper Paleolithic era--when the ancient mind became functionally comparable to the modern human mind. Finally, Abramiuk offers a model for the establishment of a discipline dealing with the study of the mind in the past that integrates all the approaches discussed.*
