

Fiat The Secrets Of An Epoch

April 9, 2005: Global access to the world's first commercialized "Principles of BlockChain"-based Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow Finance system-network starts here and now. While scientists may argue about what came first, the chicken or the egg; in cryptofinance, there is no doubt: the cryptomortgage (cryptosasset/cryptodebt) financial instrument developed by A. K. (Anoop) Bungay, Founder of Bungay International Inc. whose mature, "system-network" commenced commercial operations at the internet domain name www.private lender.org® registered by Santosh Bungay on April 9, 2005; predates the experimental, alpha-stage, subordinate "Satoshi Nakamoto"-designed payment transfer (cryptocurrency) program introduced to the public on January 8, 2009, by nearly 4 years. Whose Library should be in? Complimentary (free) high-level information regarding the subject matter related to the MQCC SAFER™ Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow Finance: Be The Bank® Series "Private Lending" program for: --> Global General Public (Interested persons) --> Prospective MQCC Customers (applicants and borrowers) --> Students (grade school/matriculation level) is Available at the website address: PrivateLender.org®. You do not need to purchase this book in order to get an excellent understanding of the subject matter, at a high-level. And, if you, as a consumer, student or interested person desire more information, you are always able to visit www.mqcc.org and read the website for further information. This book should be in your library, if you are employed (or will be employed) in at least one of the following roles: --> Investors --> Lenders --> Legislators --> Regulators --> Liability Insurers --> Lawyers --> Regulated Broker --> Professional of any other discipline where you feel that this content may be of help to your understanding of this new class of knowledge and commerce. About the Book: Less than one percent (~ Active Retail finance investor seeking zero-beta (non-public market systemic risk) investment opportunities --> Prospective borrower or capital seeker looking for investor-lender funds --> Chief Executive Officer (CEO) of a federally or non-federally regulated financial institution --> Governor of a Central Bank; or other finance sector leader, policy-maker --> Regulated professional in one of the many finance sector industry groups Take the time to invest in your knowledge by learning first-hand from the developer of the world's first regulatory-recognized, regulatory-trusted, globally-accessible cryptofinancial system-network which complies with the United Nations (UN), World Trade Organization (WTO) and Organisation for Economic Cooperation and Development (OECD) best practice. A globally accessible system-network with an Organisation for Economic Co-operation and Development (OECD)-recognized, National and International Standards-Class (NISC™) transnational private self-regulatory control system to safeguard network members and non-network users; and celebrates 14 years of successful regulatory-integrated operations on April 9, 2019. A system-network that set the defacto global standard for consumer-centric cryptofinancial systems; is successfully litigation-tested by some members of the International Council of Legal Regulators (ICLR) and serves as a proven template for individuals, organizations and countries who seek to model their own success and establish high-levels of global consumer confidence as leaders in global cryptofinancial trade, in their own right. MQCC™ Money Quality Conformity Control Organization, incorporated as MortgageQuote Canada Corp. MQCC.org™ is Global Network Administrator (GNA™) of the world's first application of the "Principles of BlockChain"-in-Commerce for a Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow electronic finance systems. Developer of National and International Standards-Class (NISC™) risk-based conformity management systems, technology, services and products that meets or exceeds regulator field examination compliance standards for "higher risk and critical, complex or high value financial activities, methods and products".

ABOUT THIS BOOK: the MQCC SAFER™ (Sustainable, Accountable, Flexible-Fair-Fiduciary, Efficient, Regulated-Respectful-Realistic; SAFER™) Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow Finance "Private Lending" Edition Program book will give you insight into the origins of cryptofinance; the results of over 14 years of successful operation; and factors to consider when getting involved in matters related to cryptofinance generally and "private lending" in particular. Long term organizational resilience achieved through the National, International Standards-Class (NISC™), Better, Safer & More Efficient™ brand of Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow Commerce Systems; this technical document describes the history, principles, concepts and core processes necessary to increase your investment and business market opportunities in the hidden and lucrative and technical world of "private finance", in your role as either an investor, lender, intermediary or borrower. Finance Sector Industry Members: If you are a member of Top Management of a federally regulated financial institution (FFI), provincial/state institution or public service regulatory financial entity, learn in confidence, the basic knowledge you need in order to properly introduce your trusting customers to the investment and borrowing opportunities found in Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow finance. Regardless of your role: student, retail investor, Chief Executive Officer, government licensed and regulated mortgage broker, understand how 14 years of successful operation of the technology neutral MQCC System-Network™ is globally recognized as the defacto standard for quality (Better, Safer and more Efficient Trade™) in Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow finance because of over 12 years of continuous registration to the family of National and International Quality Management Standards ISO 9001. Specifically, ISO 9000:2000, ISO 9001:2008 and the current, risk-based ISO 9001:2015. ISO 9001 is a family of consensus-based standards trusted and adopted as the National Standard in least 119 countries, including members of the Group of 20, Digital 9 and World Trade Organization (WTO). Legislators, Regulators, Legal Professionals, Consumers, Investors, Industry Members: discover how the MQCC System-Network™ instills regulatory confidence, prevents professional liability insurance claims through improved compliance using standards-based conformity systems, reduces consumer and investor risk, increase business revenues and increase investor-lender investment returns in the field of Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow finance; correctly defined as: The trade in non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading securities and related financial instruments; also known as Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow securities and related financial instruments. For the benefit of Canadian and International (in at least 119 countries): Consumers (Borrowers, Investors-Lenders) Government Regulated and Non-Regulated Credit Intermediaries Professional Liability Risers and Omissions Risk Insurers Regulators, Legislators, Policy Makers, Industry Groups and the General Public

Archaeologist Nina Wilde and her fiancé, former SAS bodyguard Eddie Chasse, must stop King Arthur's legendary blade from falling into the wrong hands because the truth behind the sword's power could plunge the world in a new era of war. Original.

Devoted to information security, this volume begins with a short course on cryptography, mainly based on lectures given by Rudolf Ahlswede at the University of Bielefeld in the mid 1990s. It was the second of his cycle of lectures on information theory which opened with an introductory course on basic coding theorems, as covered in Volume 1 of this series. In this third volume, Shannon's historical work on secrecy systems is detailed, followed by an introduction to an information-theoretic model of wiretap channels, and such important concepts as homophonic coding and authentication. Once the theoretical arguments have been presented, comprehensive technical details of AES are given. Furthermore, a short introduction to the history of public-key cryptography, RSA and El Gamal cryptosystems is provided, followed by a look at the basic theory of elliptic curves, and algorithms for efficient addition in elliptic curves. The important topic of "oblivious transfer" is discussed, which is strongly connected to the privacy problem in communication. Today, the importance of this problem is rapidly increasing, and further research and further generalizations are greatly anticipated. This is the third of several volumes serving as the collected documentation of Rudolf Ahlswede's lectures on information theory. Each volume includes comments from an invited well-known expert. In the supplement to the present volume, Rüdiger Reischuk contributes his insights. Classical information processing concerns the main tasks of gaining knowledge and the storage, transmission and hiding of data. The first task is the prime goal of Statistics. For transmission and hiding data, Shannon developed an impressive mathematical theory called Information Theory, which he based on probabilistic models. The theory largely involves the concept of codes with small error probabilities in spite of noise in the transmission, which is modeled by channels. The lectures presented in this work are suitable for graduate students in Mathematics, and also for those working in Theoretical Computer Science, Physics, and Electrical Engineering with a background in basic Mathematics. The lectures can be used as the basis for courses or to supplement courses in many ways. Ph.D. students will also find research problems, often with conjectures, that offer potential subjects for a thesis. More advanced researchers may find questions which form the basis of entire research programs.

Lost Secrets of the Gods
Lady Diana - top secret

Allied Exploitation of German Science after the Second World War
The name of the killer instigator revealed.

Are there 10,000-year-old secret societies that still exist today? Was there a race of giants that once inhabited the Americas? Did ancient Egypt and ancient China have heretofore undiscovered ties? Lost Secrets of the Gods delves into these ancient mysteries and many more in articles by some of the world's most intrepid and knowledgeable researchers. The old paradigms of history are being radically transformed as we discover more evidence of little-known cultures and what they achieved. Many ancient cultures spoke and wrote of visitors that gave them knowledge and helped shape their societies. Who were they, and where did they come from? We now know that many ancient cultures had advanced knowledge of science, agriculture, and astronomy, only some of which has been rediscovered in the last 100 years. Were The Iliad and The Odyssey really about an epic struggle in pre-Celtic Europe? What happened to the Persian army that completely disappeared from Egypt 2,500 years ago? Did the ancients know how to create psychic guard dogs to protect sacred sites? There is much more to history than what has officially been recorded. Lost Secrets of the Gods reveals startling truths and asks fascinating questions traditional historians have long ignored.

On the 15th annual EUROCRYPT conference on the theory and application of cryptography, was organized and sponsored by the International Association for Cryptologic Research (IACR). The IACR organizes two series of international conferences each year, the EUROCRYPT meeting in Europe and RWTO in the United States. The history of EUROCRYPT started 15 years ago in Germany with the Burg Feuerstein Workshop (see Springer LNCS 149 for the proceedings). It was due to Thomas Beth's initiative and hard work that the 76 participants from 14 countries gathered in Burg Feuerstein for the first open meeting in Europe devoted to modern cryptography. I am proud to have been one of the participants and still fondly remember my first encounters with some of the celebrities in cryptography. Since those early days the conference has been held in a different location in Europe each year (Udine, Paris, Linz, Linköping, Amsterdam, Davos, Houthalen, Aarhus, Brighton, Balnainford, Lofthus, Perugia, Saint-Malo, Saragossa) and it has enjoyed a steady growth. Since the second conference (Udine, 1983) the IACR has been involved, since the Paris meeting in 1984, the name EUROCRYPT has been used. For its 15th anniversary, EUROCRYPT finally returned to Germany. The scientific program for EUROCRYPT '97 was put together by a 18-member program committee which considered 104 high-quality submissions. These proceedings contain the revised versions of the 34 papers that were accepted for presentation. In addition, there were two invited talks by Ernst Bodelander and by Gerhard Frey.

Each year, tens of thousands of children are conceived with donated gametes (sperm or eggs). By some estimates, there are over one million donor-conceived people in the United States and, of course, many more the world over. Some know they are donor-conceived. Some do not. Some know the identity of their donors. Others never will. The scientific community has long debated what donor-conceived people should know about their genetic progenitors as they grow up. What is the value of knowing who your genetic progenitors are? How are our identities bound up with knowing where we come from? What obligations do parents have to their children? And what makes someone a parent in the first place? In *Conceiving People: Identity, Genetics and Gamete Donation*, Daniel Groll argues that people who plan to create a child with donated gametes should choose a donor whose identity will be made available to the resulting child. This is not, Groll argues, because having genetic knowledge is fundamentally important. Rather, it is because donor-conceived people are likely to develop a significant interest in having genetic knowledge and parents must help satisfy their children's significant interests. In other words, because a donor-conceived person is likely to care about having genetic knowledge, their parents should care too.

He argues that these programs did far more than spread German industrial science: they forced businessmen and policymakers around the world to rethink how science and technology fit into diplomacy, business, and society itself.

He and My Shadow
With a romance brewing between him and Bethany, the discovery that his brother and sister are secretly king and queen of the Fairy world, plus the Stain brothers growing more and more underhanded, fourteen-year-old Eric is not in the right state of mind for his next two tasks.

This monograph provides a formal and systematic exposition of the main results on the existence and optimality of equilibria in economies with increasing returns to scale. For that, a general equilibrium model is carefully constructed first by means of a precise formalization of consumers and firms, and the proof of an abstract existence result. The analysis shifts then to the study of specific normative and positive models which are particularizations the general one, and to the study of the efficiency of equilibrium allocations. The book provides an unified approach of the topic, it maintains a relatively low mathematical complexity and offers a highly self-contained exposition.

Reveals how the Federal Reserve under Paul Volcker engineered changes in America's economy
The papers in this volume were presented at the CRYPTO 88 conference on theory and applications of cryptography, held in Santa Barbara, California, August 21-25, 1988. The papers were chosen for their perceived originality and often represent preliminary reports on continuing research. The main sections deal with the following topics: Zero-Knowledge, Number Theory, Pseudorandomness, Signatures, Complexity, Protocols, Security, Cryptanalysis. As such, they will give the committed reader a unique insight into the very latest developments in the field.

Eurocrypt is a conference devoted to all aspects of cryptologic research, both theoretical and practical, sponsored by the International Association for Cryptologic Research (IACR). Eurocrypt 90 took place in Aarhus, Denmark, in May 1990. From the 85 papers submitted, 42 were selected for presentation at the conference and for inclusion in this volume. In addition to the formal contributions, short abstracts of a number of informal talks are included in these proceedings. The proceedings are organized into sessions on protocols, number-theoretic algorithms, boolean functions, binary sequences, implementations, combinatorial schemes, cryptanalysis, new cryptosystems, signatures and authentication, and impromptu talks.

This comprehensive encyclopedia provides easy access to information on all aspects of cryptography and security. The work is intended for students, researchers and practitioners who need a quick and authoritative reference to areas like data protection, network security, operating systems security, and more.

The explosive novel of Italy's revolutionary 1969 It was 1969, and temperatures were rising across the factories of the north as workers demanded better pay and conditions. Soon, discontent would erupt in what became known as Italy's Hot Autumn. A young worker from the impoverished south arrives at Fiat's Mirafiori factory in Turin, where his darker complexion begins to fade from the fourteen-hour workdays in sweltering industrial heat. His bosses try to withhold his wages. Or cynical, dry-witted narrator will not bend to their will. "I want everything, everything that's owed to me," he tells them. "Nothing more and nothing less, because you don't mess with me." Around him, students are holding secret meetings and union workers begin halting work on the assembly lines, crippling the Mirafiori factory with months of continuous strikes. Before long, barricades line the roads, tear gas wafts into private homes, and the slogan "We Want Everything" is ringing through the streets. Wrought in spare and measured prose, Balestrini's novel depicts an explosive uprising. Introduced by Rachel Kushner, the author of the best-selling *The Flamethrowers*, *We Want Everything* is the incendiary fictional account of events that led to a decade of revolt.

"Fiat Voluntas Tua"
Hawker's Secret Cold War Airfield

This book is an authentic historical document, supported by extensive analytical information, in which former Fiat top manager Giorgio Garuzzo passionately recounts his experience within Fiat between 1976 and 1996. It is a narrative from the inside that sheds new light on events that have remained cloaked in mystery: the arrival and departure of Carlo De Benedetti, the "march of the forty thousand", the sacking of Vittorio Ghidella, the clashes between Umberto Agnelli and Cesare Romiti, the Group's involvement in the "clean hands" scandal, the role of Gianni Agnelli and his relationships with his brother and Cesare Romiti and the intervention of Mediobanca. Garuzzo discusses the issues connected with the range of cars and marques, touching on major themes of national or international relevance that were unrelated to Fiat but nonetheless conditioned its activities: terrorism and the unmanageability of the factories, inflation, the devaluation of the Lira, the role of the trade unions and the General Confederation of Italian Industry, Japanese competition and European integration.

There is a nuclear weapon in the hands of the Vatican city's deadliest enemy. And time is running out to stop an attack. Marco Venetti, the only man the pope trusts, has tracked down the traitor who nearly succeeded in his mission to kill the pope. But the traitor holds a crucial piece of information: the name of the Russian mafioso in possession of a nuclear bomb. Forced to work with a man he despises to prevent a deadly explosion, Marco sets a trap for the Russians. Inside the stone walls of an ancient castle in Portugal, surrounded by high mountains, he waits to ambush his target. But a double-cross ruins everything and he must flee, alone and without backup, leaving a trail of death and destruction behind. All Marco knows is that the attack is imminent. And that to prevent it, he must enter a deadly game of cat-and-mouse that will take him across the continent, on land and by sea. With time running out, he will stop at nothing to uncover the truth. Because the secrets inside the Vatican may be the deadliest threat of all. The Vatican Secret is an explosive thriller full of treachery, international conspiracy and non-stop action. Fans of Joel C. Rosenberg, Tom Clancy and Steven Konkoly will be completely gripped. Praise for Peter Hogenkamp: "Wow... So many twists and turns that keep you guessing... Captures your attention and doesn't let go till the end." TB Honest, "Grabs you on the first page and is powered by non-stop action and a taut, emotional narrative. A real page-turner!" Goodreads Reviewer, "Fast-paced action-packed... Nail-biting tension... I really enjoyed reading and would definitely recommend." NetGalley Reviewer, "Riveting... I was completely engrossed... A tonne of action, plenty of twists and turns, and enough drama to keep you feverishly turning the pages." Readers Retreat "An exhilarating action thriller... Fast-paced and engaging." DP Reads, "A fast-paced action thriller with a lot of twists and turns that keep you on the edge of your seat until the very end... The main character Marco is amazing!" Goodreads Reviewer "Great action-packed novel... Pulled me in from the first page. There was so much action... I highly recommend" Just Read Jess, "If you're a fan of Dan Brown and Steve Berry, you do not want to miss this new series... Kept me hooked; the action never completely let up." Fireflies & Freekicks "Fantastic... A blistering read that won't disappoint." Goodreads Reviewer, "Relentless action, a gripping storyline... Promises to be a terrific series." Goodreads Reviewer "Fast paced, action packed, adrenaline inducing." Sharon Beyond the Books, "If you are in need of excitement—and who isn't given the lack of travel and parties etc? then you need to read this book. You will be breathless from all the running, and you don't even need to get out of bed. There are so many twists and turns you could get whiplash, but it would be worth it to reach the end of this wild ride." Mrs Average

Evaluates
The aim of this book is to integrate machine learning approaches to meet various analytical issues in cloud security. Cloud-security with ML has long-standing challenges that require methodological and theoretical handling. The conventional cryptography approach is less applied in resource constrained devices. To solve these issues, machine learning approach may be effectively used in providing security to the vast growing cloud environment. Machine learning algorithms can also be used to meet various cloud security issues, like effective intrusion detection system, zero knowledge authentication system, measures for passive attacks, protocols design, privacy system design and application and many more. This book also contains case study / projects to implement various security features using machine learning algorithms and analytics. This book will provide a learning paradigm in field of Artificial Intelligence and deep learning community with related datasets to help dive deeper into Machine Learning applications in cloud security.

What and who caused the death of Lady Diana? Was she a victim of a fatal accidental car crash, or was she violently murdered through a precise and well organized plot? According to the authors of many books it is an extremely mysterious event, and it will remain so forever, however this book gives out evidence, testimonies and accuracies about how things really went. Nothing of what happens can remain hidden forever! The literary content of this book, like a manual, aims to reveal everything about what everyone called "THE BIG UNSOLVABLE MYSTERY ABOUT LADY DIANA'S DEATH". After the Princess' tragic final events, after reading this book it will be easy to identify the real culprits, their names and last names, it will be obvious why and how they acted, what was their true motive and every single detail missed by the greatest investigators. Only after pinning the wrongdoers Diana will be able to rest in peace, and her two sons will be able to finally accept what has sadly happened to their mother. This publication is a tribute to the world most loved Princess.

The retreat from Responsibility

Looks at the accountability - or increasingly the lack of accountability - of Australia's state and federal governments. Its focus is on the government-directed public-sector reforms of the last two decades that have made governments less accountable for service delivery, and the repercussions these reforms have had.

This book constitutes the strictly refereed post-workshop proceedings of the First International Workshop on Information Hiding, held in Cambridge, UK, in May/June 1996, within the research programme in computer security, cryptology and coding theory organized by the volume editor at the Isaac Newton Institute in Cambridge. Work on information hiding has been carried out over the last few years within different research communities, mostly unaware of each other's existence. The 26 papers presented define the state of the art and lay the foundation for a common terminology. This workshop is very likely to be seen at some point as one of those landmark events that mark the birth of a new scientific discipline.

The fascinating story of a century-old automobile dynasty Fiat is one of the world's largest automakers, but when it made headlines by grabbing control of a bankrupt Chrysler in 2009 it was unknown in the U.S. Fiat's against-all-odds swoop on Chrysler—masterminded by Sergio Marchionne, the Houdini-like manager who saved Fiat from its own near-collapse in 2005) has made the automaker one of the most unlikely winners of the financial crisis. Mondo Agnelli is a new book that looks at the chain of unpredictable events triggered by the death of Gianni Agnelli in 2003. Gianni, the charismatic, silver-haired power broker and style icon, was the patriarch who had lead the company founded by his grandfather in 1899. But Gianni's own son had committed suicide. Without a mature heir, the dynasty and Fiat were rudderless. Backed by Gianni's closest advisors, his serious, shy, and determined grandson John Plunked Marchionne from obscurity. Together, they saved the family company and, inadvertently, positioned Fiat as a global trailblazer when the global storm hit. A classic story of ingenuity and hard work, the book portrays a business dynasty that triumphed over adversity and family tragedy because of its own smarts, sweat, and ability to bend the rules A an engaging tale for those interested in the stories behind the economic crash, the book contains never-before reported material about how Fiat succeeded in making Chrysler profitable where both Daimler AG and Cerberus, its previous owners, had failed. A story for a wide audience, from car buffs, business readers, lovers of Italy, and anyone fascinated by the lifestyle of Europe's most glamorous industrial dynasty, this book tells the tale of how Fiat achieved the seemingly impossible -- turning around an American automotive icon everyone else had given up for dead.

This reference work looks at modern concepts of computer security. It introduces the basic mathematical background necessary to follow computer security concepts before moving on to modern developments in cryptography. The concepts are presented clearly and illustrated by numerous examples. Subjects covered include: private-key and public-key encryption, hashing, digital signatures, authentication, secret sharing, group-oriented cryptography, and many others. The section on intrusion detection and access control provide examples of security systems implemented as a part of operating system. Database and network security is also discussed. The final chapters introduce modern e- business systems based on digital cash.

Across the globe people are having problems finding work, earning a wage and the internet is their last resort. Once they start looking for work online, they don't know what to search to find work or even what kind of jobs there are online. Most web searches for, "earning online" will get you expensive seminars, videos & plans that will only motivate you to want to make money but never tell you exactly how to earn money. All the while the people motivating you are getting paid from you, people like you & me. My family, friends; loans helped me get these special price packages of nothing. After spending a couple years being scammed, hearing all the same empty answers, I finally did the hard part myself. I found the jobs, did the work, figured out the secrets, tested them over and over again. This book is to help anyone skip the 'bull' & get directly to earning online! Simply with an internet ready device & the internet, start earning currency online from Fiat to Crypto, you'll get access to the information you'll need to jump start your Online Entrepreneur Career!

Rather you're an entrepreneur newcomer, moderate earner, a veteran, have no money, some money, looking for additional income or just trying to have an income, this book is for you. These are the answers & tips that will stay with you for the rest of your life.

In 1948, Hawker Aircraft, faced with new jet projects that could not use their existing airfield at Langley, began the process of searching for alternative accommodation for their flight-testing requirements. It would, however, take three hard years before Dunsfold would be made available by a reluctant Air Ministry and the company was able to launch its first jet aircraft design – the Sea Hawk – into series production for the Royal Navy, closely followed by the superlative Hunter. Hawker Aircraft would go on to produce nearly 2,000 Hunters before other projects came to the fore. As Hunter production continued in the late 1950s, the company looked to its successor the Mach 2 capable air superiority fighter designated P.1121, though this would stall before flight in the wake of serious national financial shortfalls. With the loss of its premier project, the company came upon a radical new engine proposal and schemed an aircraft around it capable of vertical take-off and landing. While many decried the proposal, claiming it would never amount to anything, the Harrier would go on to prove the nay-sayers wrong as it came into its own during the Falklands War. Following the Harrier, Hawker Siddeley stepped into the competitive trainer aircraft market with the Hawk for the RAF. After completion of the RAF requirement, Hawk was sold into air arms across the world, including the US Navy, an incredible achievement for a UK design. British Aerospace then brought forth the Harrier GR.5, the UK version of the US AV-8B, a completely upgraded and improved Harrier. One might expect that this prolific output was the result of some massive industrial plant in the Midlands rather than an isolated aerodrome tucked in the rural hinterland of south Surrey. Surrounded for most of its existence by secrecy, due to the nature of its work, Dunsfold has largely escaped the notice of the general public. This work shines a light on the remarkable work carried out there.

Dario Ezcurrea is one of the thousands of Argentinians unlucky enough to be 'disappeared' by the military government - murdered by the local chief of police with the complicity of his friends and neighbours. Twenty years later, Fefe returns to the town where Dario met his fate and attempts to discover how the community let such a crime happen. Lies, excuses and evasion ensue - desperate attempts to deny the guilty secret of which the whole community, even Fefe himself, is afraid.

Revealing tricks, secrets and methods to getting someone found with concise directions from a seasoned skip tracer providing an advantage with big results. Invaluable tactics delve into information and resources not available in any other book. Tools that streamline the process to find the person that you are looking for. For attorneys, collectors and anyone who specializes in skip tracing. Investigative specialists will appreciate compilation of sites with direct easy-access hyperlinks taking you to the front page of the best skip tracing tools found today. Review by Ron L Brown Author of Manhunt: The Book Outstanding! I have read many books and manuals on skip tracing and even wrote a few and seldom have seen any better information compressed into a package as tidy as this one. Valerie is an experienced professional and it shows. Valerie, thank you for sharing. Val, I read your blog and I must bow to your creative fiat. You must write a book, manual, paper or something, describing the tricks of the trade you've developed for the rest of us use. Just to let you know what I think. -Carnell Bonner, Sr

A Stalker From Hell May Northcott is a woman at the end of her rope. She'd almost gotten used to her employer, the ex-demon Lord Magoth, spending his days hanging around her home and interrupting her private moments with her lover, Gabriel. Then trouble appears on her doorstep in the form of a nearly dead man. With May fighting to control the dragon shard, Magoth wrangling to regain his position and powers, and a mysterious and deadly lord bent on their destruction, Gabriel has his work cut out for him. Now he'll have to claw his way through all the distractions and convince May that their love is strong enough to conquer all enemies.

A Life's Secret: A Novel (1862) is a novel by Mrs. Henry Wood. Written towards the beginning of her career as a leading English novelist of the Victorian era, A Life's Secret: A Novel is a sweeping exploration of class, society, and the dangers of keeping secrets. Blending several literary genres, including mystery and romance, Wood's novel is a masterful and underappreciated work of fiction that remains essential nearly two centuries after it was published. Orphaned at a young age, Austin Clay has found success working for his uncle, a builder. When his uncle dies unexpectedly, the young man moves to London, where he hopes to make a name for himself despite his limited upbringing. There, he meets the young Florence, a twelve-year-old girl whose uncle Clay rescues from a near-fatal accident. As the years go by, Austin and Florence develop a budding romance, but are unable to marry without the approval of her uncle, Mr. Hunter. Meanwhile, Hunter is forced to defend himself from the blackmail of Miss Gwinn, who threatens to reveal his darkest secret and to derail his successful business. The story unfolds as a moving portrait of the burgeoning labor movement, the complexities of class in Victorian England, and the threat posed to religious values by an expanding industrial world. A Life's Secret: A Novel is a sweeping tale of two men tied by fate whose divergent backgrounds clash while bringing them together in the end. Hopeful in the face of poverty and hardship, Wood relies on her traditional ideals to critique and examine life in nineteenth century England, expanding compelling characters and complex plots to do so. While not her most popular work, A Life's Secret: A Novel is a work of its time that remains relevant in our own. With a beautifully designed cover and professionally typeset manuscript, this edition of Mrs. Henry Wood's A Life's Secret: A Novel is a classic English literature reimagined for modern readers.

An Open Secret

How better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Information is power. It drives commerce, protects nations, and forms the backbone of systems that range from health care to high finance. Yet despite the avalanche of data available in today's information age, neither institutions nor individuals get the information they truly need to make well-informed decisions. Faulty information and sub-optimal decision-making create a imbalance that is exaggerated as governments and corporations amass enormous databases on each of us. Who has more power: the government, in possession of uncensored terabytes of data (some of it obtained by cyberstalking), or the ordinary citizen, trying to get in touch with a government agency? In Missed Information, David Sarokin and Jay Schalkin explore information—not information technology; but information itself—as a central part of our lives and institutions. They show that providing better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Sarokin and Schalkin argue that freely flowing information helps systems run more efficiently and that incomplete information does just the opposite. It's easier to compare shop for microwave ovens than for doctors or hospitals because information gaps that hinder the entire health-care system. Better information about such social ills as child labor and pollution can help consumers support more sustainable products. The authors examine the opacity of corporate annual reports, the impenetrability of government secrets, and emerging techniques of "information foraging." "The information imbalance of power can be reconfigured, they argue, with greater and more meaningful transparency from government and corporations.
