Reporters in the newsroom are becoming more involved in computer-assisted reporting and online news research than ever before. This edition introduces readers to computer-assisted reporting and to describe how leading journalists are using personal computers for news gathering in modern print, broadcast, and online newsrooms. It provides a thorough discussion of technology and its applications to news reporting. Computer Assisted Reporting focuses on the computerization of newsgathering, highlighting the fact that the computer assists journalists by making writing easier, and also makes gathering and organizing information more efficient. As it begins, the book demonstrates methods for journalists to get more from their computers, such as data retrieval, data analysis, information storage, and dissemination of that information in both processed and unprocessed forms. It concludes with a refined proposal, originally proposed in the first edition, for five stages for development of computer literacy in the newsroom.

Each illustrated resource offers visual learners a great beginner's guide to a particular topic, augmenting step-by-step instructions with full-color screen shots.

Since its first appearance in 2008, this book has changed the landscape of Virgilian studies. Analysing closely the logic and the literary genres of Virgil's three poems, it politely confronts the modern orthodoxy that Virgil signalled distaste for the methods of his ruler, Octavian-Augustus. It refreshes the study of Virgil's poetry by comparing it with the detail (normally neglected by scholars) of Rome's civil wars after Julius Caesar's death, when Octavian's survival looked highly unlikely. And it argues that Virgil wrote as a passionate - and brave - partisan of Octavian, who - like a good lawyer - confronted his patron's undeniable failings in order to defend.
