why an organisation defines and its reporting boundaries, it is possible to understand what is truly "valued" (or not) in its business model. This innovative book reviews the guidelines and frameworks from the major relevant international organisations including: the International Accounting Standards Board, Global Reporting Initiative, Sustainability Accounting Standards Board, International Integrated Reporting Council, Carbon Disclosure Standards Board, and the World Intellectual Capital Initiative, and analyses their development and impact on the boundaries of financial and non-financial reporting. Illustrated with case studies and interviews with representatives of these organisations, this concise volume makes a significant contribution to the future of reporting theory and practice. It will be of great interest to advanced students, researchers, practitioners and policy makers.

J. Fred Weston provides managers and executives with the information they need to understand essential accounting principles, from vocabulary and financial statements to cash flow and valuation. Covering balance sheets, income statements, reporting measures, and even essential ratios, this practical, in-depth book provides a one-stop, reference for all aspects of finance and accounting, and will help managers take essential steps toward making informed decisions based on the numbers they face every business day.

A Comparative Analysis of their Constitutive Role

The increasingly crucial role of companies non-financial disclosure (NFD) and integrated reporting (IR) has led to a lively debate among academics, practitioners, and regulators on the approaches, framework, contents, principles, and standards that should oversee these forms of reporting. Through several expert contributions, conducted both with qualitative and quantitative methodologies, this book provides an up-to-date portrait of the debate by exploring corporate NFD either in its mandated contents or voluntary information. Contributing authors provide studies that encompass the different lines of NFD, namely non-financial risk reporting, sustainability reporting, and intellectual capital reporting, as well as the integration of financial and non-financial information through IR, the assurance of the NFD and IR through auditing activities, and the role of management and CFOs in NFD and IR.

Long term asset owners and managers, while seeking high risk-adjusted returns and efficiently allocating scarce financial capital to the highest value economic activities, have the essential and formidable role of ensuring the sustainability of return. But generally accepted financial accounting methods are ill-equipped to provide clear signals of the risks and opportunities created by scarce natural and human capital. Hence many investment managers in global financial markets, while performing due diligence on portfolio companies, examine metrics of non-financial performance, especially environmental, social and governance (ESG) indicators. Broken into three sections, this book outlines the rationale for and methods used in six areas where financial acumen has been harnessed to the goal of combining monetary return with long run sustainability. The first section offers an introduction to the role of finance in achieving sustainability, and includes an overview of the six areas—sustainable investing, impact investing, decentralized finance, conservation finance, and cleantech finance. The methods section of the book illustrates analytical tools and specialized data sources essential to those interested in increasing the level of social responsibility embedded in economic activity. The applications section describes and differentiates each of
