have convened in a series of workshops to explore and analyze emerging issues in the field. They have covered a wide array of topics, including corporate governance, auditing, financial disclosure, international standards boards, and the dynamics of markets and institutions. Most recently, they have focused on the role that accounting practices and policies may have played in the global financial crisis of 2008. In this volume, the editors showcase contributions from the workshops that represent the full spectrum of issues and perspectives relating to accounting and regulation. Each paper incorporates the most current examples and references to reflect the latest insights, with an emphasis on exploring future implications for theory and research,

students as well as a valuable resource for established behavioural accounting researchers.

This textbook contains the fundamentals for an undergraduate course in mathematical finance aimed primarily at students of mathematics. Assuming only a basic knowledge of probability and calculus, the material is presented in a mathematically rigorous and complete way. The book covers the time value of money, including the time structure of interest rates, bonds and stock valuation; derivative securities (futures, options),

Earnings Quality

A Critical Analysis

This is the first and only book to offer a comprehensive survey of accounting research on a broad international scale for the last two centuries. Its main emphasis is on accounting research in the English, German, Italian, French and Spanish language areas; it also contains chapters dealing with research in Finland, the Netherlands, Scand

accounting as a discipline and as a practice in three broad geographic settings. The bulk of the first volume then draws together a series of contributions that analyse the scholarly literature in terms of distinct intellectual and theoretical social science perspectives. The volume includes a chapter which looks at work informed by psychology as a base discipline. The volume also includes a set of chapters that seek to evaluate and explain issues of research method for the different approaches to research found within management accounting. Special pricing available if purchased as a set with Volume 2.

methods and models for management. Stresses those fundamental concepts that are most important for the practical analysis of management decisions: modeling and evaluating uncertainty explicitly, understanding the dynamic nature of decision-making, using historical data and limited information effectively, simulating complex systems, and allocating scarce resources optimally.

This text is an introductory course in management accounting for those seeking an understanding of basic principles and underlying concepts without detailed technical knowledge. It has a strong practical emphasis, with plenty of examples taken from the real world as well as

inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Libby/Libby/Short is the only financial accounting text to successfully implement a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the
