With this fourth edition, accountants will acquire a practical set of tools and the confidence they need to use them effectively in making business decisions. It better reflects a more conceptual and decision-making approach to the material. The authors follow a "macro- to micro-" strategy by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle. The objective is to establish how a financial statement

communicates the financing, investing, and operating activities of a business to users of accounting information. This motivates accountants by grounding the discussion in the real world, showing them the relevance of the topics covered to their careers.

Scott reveals vast amounts of financial accounting information drawn from recent research that has until now been hidden in academic journals. He provides a clear, easy-to-use framework for students to (1) place this information in a financial accounting context, (2) explain and analyze the information intuitively and (3) to reveal the information's relevance in understanding the practice of accounting.
