What does it mean to be Asian American? Should Asian American identity be construed primarily in cultural terms or racial terms? And why should contemporary theology care about such questions?

Disciplined by Race: Theological Ethics and the Problem of Asian American Identity reveals the critical importance of Asian American experience for contemporary theological debates on race. The book challenges readers to move

beyond conventional perceptions of Asian Americans as model minorities and to confront the ways in which Asian Americans are socially restrained by whiteness. Rather than being insulated from the logics of white racism in the modern United States, being Asian American is tragically defined by those logics. Coming to grips with how Asian Americans are disciplined by race reveals the prospects for Asian American self-determination and raises the question of whether resistance to the social demands and allure of whiteness is realistically possible, for Asian Americans

and non-Asian Americans alike. The last five years have been extremely challenging, but also very innovative for cephalopod science, and the outstanding tradition of biological contribution with cephalopod molluscs as key players in science and human activities and interests has continued. This Research Topic is one of several dedicated to cephalopod molluscs (e.g., Hanke and Osorio, 2018; Ponte et al., 2018) hosted by Frontiers over the last few years, not to mention other papers published separately. Highlighting of cephalopod science is important because it has much to offer not

only the life science community, but also more broadly the public perception of science and its understanding and relationship with scientific endeavour and cephalopods as living organisms and part of our everyday life (at least for most of us). This contribution illustrates the key needs that need to be overcome by the cephalopod research community, i.e. rapid and effective mechanisms for exchange of knowledge and resources, sharing of laboratory protocols, videos, tissues, samples and data-sets, innovative approaches and initiatives in public engagement.

The cuttlefish comic included is an excellent example of a type of media that can be used to expand scientific knowledge to the public and human relationship with live animals. There are strategic challenges in convincing globally distributed policy makers and funders of the relevance of cephalopods in scientific advances, and also in the regulatory aspects, since cephalopods are the only invertebrates whose use is regulated in Europe in a research context and this increases the need for integrated oversight and direction in terms of ethics and animal welfare

Oceanography and Marine Biology: An Annual Review remains one of the most cited sources in marine science and oceanography. The ever increasing interest in work in oceanography and marine biology and its relevance to global environmental issues, especially global climate change and its impacts, creates a demand for authoritative reviews summarizing the results of recent research. This volume covers topics that include resting cysts from coastal marine plankton, facilitation cascades in marine ecosystems, and the way that human activities are rapidly altering the sensory landscape and behaviour of marine animals. What would you do if you were drafted to fight in a war? As a conscientious objector opposed to all wars, Wayne R. Ferren Jr. had to answer that question during the Vietnam War. He called on his religious and scientific backgrounds as well as his environmental activism to argue that he should be excluded from fighting in, or supporting this war. Following a successful defense of his claim, Wayne served two years of alternative civilian service, which influenced his professional and personal life for the next fifty years.

Decades after his service, he was shocked to find his name on the Vietnam War Memorial, which turned out to be that of another young man with a similar name born the same year Wayne was born. That man died in 1968 when his plane was hit by artillery fire and crash landed at Khe Sanh Marine Combat Base. He will forever remain a teenage father killed in a senseless war. To this day, the duality haunts the author, and in this multifaceted memoir, he looks back at a lifetime and how his background, scientific training, and transcendentalism have guided him on a path of conscientious objection, service, and conservation, believing all things

Tracing the history of refugee settlement in Fargo, North Dakota, from the 1980s to the present day, *Race-ing Fargo* focuses on the role that gender, religion, and sociality play in everyday interactions between refugees from South Sudan and Bosnia-Herzegovina and the dominant white Euro-American population of the city. Jennifer Erickson outlines the ways in which refugees have impacted this small city over the last thirty years, showing how culture, political economy, and institutional transformations collectively contribute to the racialization of white cities like Fargo in ways that complicate their demographics.

Race-ing Fargo shows that race, religion, and decorum prove to be powerful forces determining worthiness and belonging in the city and draws attention to the different roles that state and private sectors played in shaping ideas about race and citizenship on a local level.

Through the comparative study of white secular Muslim Bosnians and Black Christian Southern Sudanese, Race-ing Fargo demonstrates how cross-cultural and transnational understandings of race, ethnicity, class, and religion shape daily citizenship practices and belonging.

Hudson Bay bear comparison with the classic fjords of Norway and the Baltic Sea raised beaches. As for wetlands, there are distinctive Arctic, Subarctic, Boreal, Eastern Temperate and Atlantic wetlands, and their extent is second only to those of Russia. In the Hudson and James Bay regions, between 75-100% of the terrestrial surface is comprised of wetlands. One of North America's largest river basins, the Great Lakes-St. Lawrence basin, has its source in Minnesota, straddles the USA-Canada border and debouches into Quebec as the St. Lawrence River and evolves through its estuary into the Gulf of St. Lawrence, a journey of almost 5,000 km. meteorite craters are concerned, 10% of the world's total are located in eastern Canada, including some of the largest and most complex landforms. They are preserved preferentially in the ancient Shield terrain of Quebec. Finally, the three million km<sup>2</sup> of permafrost controlled relief in eastern Canada serves as a reminder of the vulnerability of eastern Canada's landscapes to climate change. Effects of warming are expressed through thawing of the permafrost, disruption of transportation corridors and urban construction problems, ever-present geomorphic hazards. This book elucidates the poetics of Philodemus of Gadara, a first century BCE Epicurean philosopher

and poet, whose *On Poems* survives in extensive fragments among the Herculaneum papyri. Although his treatise was primarily polemical and lacks positive exposition, his views are often recoverable from a careful reading of the debates, occasional direct evidence, and attention to his basic Epicurean commitments. His main critical principle is that form and content are inseparable and mutually-reinforcing: a change in one means a change in the other. The poet uses this marriage of form and content to create the psychological effect of the poem in the audience. This effect is hard to pin down exactly. Poems produce "additional thoughts" in the

audience, and these entertain them. It seems clear that Philodemus expected good poets to arrange form and content suggestively, so that the poems could exert a lasting pull on the minds of the audience. Additionally, this book summarizes the views of Philodemus' opponents, the technical terminology of literary criticism in the Hellenistic period, and the history of Epicureanism's engagement with poetics. Epicurus did not write an *On Poems* but Metrodorus did, and this is probably Philodemus' touchstone for his own views. Zeno of Sidon, Demetrius Laco, Siro, and other Epicureans are examined as well. The book concludes with an appendix of

topics examined by Philodemus, such as genre, mimesis, "appropriateness," utility, and various technical terms.

A historical look at and current guide to the Cains River in New Brunswick. There is almost a mystical aura surrounding the Cains and its Atlantic salmon and brook trout fishery. Only about a third of it was ever settled and then lightly, and by the middle of the twentieth century settlers had all given up and the river reverted to completely wild, which it still is today. The book also explores the Cains's relationship with the Miramichi River, in particular the Black Brook, the biggest and most productive pool on the river. In low

This book comprehensively describes essential research and projects on climate change and biodiversity.

Moreover, it includes contributions on how to promote the climate agenda and

biodiversity conservation at the local level. Climate change as a whole and global warming in particular are known to have a negative impact on biodiversity in three main ways. Firstly, increases in temperatures are detrimental to a number of organisms, especially those in sensitive habitats such as coral reefs and rainforests. Secondly, the pressures posed by a changing climate may lead to sets of responses in areas as varied as phenology, range and physiology of living organisms, often leading to changes in their lifecycles (especially but not only in reproduction), losses in productivity or even death. In some cases, the very survival of very sensitive species may be endangered. Thirdly, the impacts of climate change on

## Download Free Fish 2017 New Brunswick

biodiversity will be felt in the short term with regard to some species and ecosystems, but also in the medium and long term in many biomes. Indeed, if left unchecked, some of these impacts may be irreversible. Many individual governments, financial institutes and international donors are currently spending billions of dollars on projects addressing climate change and biodiversity, but with little coordination. Quite often, the emphasis is on adaptation efforts, with little emphasis on the connections between physio-ecological changes and the lifecycles and metabolisms of fauna and flora, or the influence of poor governance on biodiversity. As such, there is a recognized need to not only better understand the impacts of

climate change on biodiversity, but to also identify, test and implement measures aimed at managing the many risks that climate change poses to fauna, flora and micro-organisms. In particular, the question of how to restore and protect ecosystems from the impact of climate change also has to be urgently addressed. This book was written to address this need. The respective papers explore matters related to the use of an ecosystem-based approach to increase local adaptation capacity, consider the significance of a protected areas network in preserving biodiversity in a changing northern European climate, and assess the impacts of climate change on specific species, including wild terrestrial animals. The book also

This book considers the key issues of concern to consumers, including the treatment of animals, the use of antibiotics, feed additives and hormones, and how these are monitored, regulated, and communicated to consumers. It will also be very useful for early career professionals in the food and agricultural sectors.
