In this provocative study of major twentieth century African-American writers and critics, Sandra Adell takes an unprecedented look at the relationship between black literature and criticism and the complex ensemble of Western literature, criticism, and philosophy. Adell's

investigation begins with an analysis of the metaphysical foundations of W. E. B. Du Bois's famous formulation of double-consciousness and how black writing bears the traces of such European philosophers as Kant, Hegel, and Marx. She then examines, in the double context of black literature and European philosophy, the writings of such major authors and essayists as Richard Wright, Leopold Senghor, Maya Angelou, Houston A. Baker, Jr., and Henry Louis Gates, Jr. Adell gives a thoughtful analysis of the "double bind" created by conflicting claims of Euro- and Afrocentrism in black literature.

This book examines the emergence of a new genre during the eighteenth century: the nostalgia poem. This genre is best understood by reconceiving the premises of nostalgia itself, examining it as first and foremost a mode of idealization rather than a longing for the past. From the poems that make up this genre, we have derived many of our modern ideas and images of nostalgia. In tracing the history of the nostalgia poem, this book also traces a pattern of "tropic change," in which a new genre is built around tropes extracted from the dying genres. This new genre then begins producing its own

tropes; in the case of the nostalgia poem, these include idealized school days and ruined villages. As these tropes become overly familiar, the nostalgia poem genre itself begins to fall apart. This book reevaluates poems ranging from Dryden's Hastings elegy to Crabbe's The Village, showing how works as varied as Gray's Eton College Ode, Macpherson's forged epics, and Goldsmith's The Deserted Village are all part of a doomed literary experiment--an experiment that has nevertheless determined the course of modern nostalgic thought.

The Illustrated American was a periodical published in New York City during the last decade of the 1800s. Though billing itself as "A Weekly News Magazine," it also contained stories of a more general nature, articles on politics, and even works of fiction. A comparatively short-lived publication, with issues from February 22, 1890, until 1900, it has been described as "similar to Life in its attractively illustrated news feature articles." Taking place in Chicago during The Illustrated American's early years was the so-called World's Fair, though more accurately and correctly it was

titled the World's Columbian Exposition. Originally intended to be a celebration of the quadricentennial of Columbus' 1492 discovery of the New World, administrative and logistical problems effectively pushed back the actual opening date until May, 1893. One of the principal purposes of the fair was to show what had been discovered and learned about the indigenous cultures and native peoples of the Americas during the four hundred years since Columbus' time. Thus, exhibits of an anthropological, archeological, and ethnological nature were to be a prime focus of at least part of the exposition. The Illustrated American had been allotted space at the Columbian Exposition to display both a collection of prehistoric relics from the American Southwest and scale models of the ancient aboriginal buildings located there. Therefore, in August of 1891, Maurice M. Milton, then general manager of The Illustrated American, hired Mr.

Warren K. Moorehead, an archeologist formerly with the Smithsonian Institution in Washington, D. C., to lead a scientific expedition into the "Cliff Dwellers' country" of Colorado, New Mexico, and Utah. He was to secure such a collection of artifacts and make plans and photographs of the ruins themselves. Also of prime interest to The Illustrated American, of course, was the regular contribution of articles to the publication from members of the expedition, not only after they returned from their explorations, but also while they were actually away in the field. The resulting series of articles, fourteen in all, began in the April 2, 1892, issue and concluded with that of August 27 of the same year. All, with the exception of the last one, were entitled "In Search of a Lost Race," referring to the so-called "Cliff Dwellers" of the southwest United States. The Illustrated American Exploring Expedition, as it called

itself, was one of the first organized scientific parties to be sent out from the East for the specific purpose of exploring, studying, and describing in printed publications the prehistoric culture of the "cliff dwellers" in the San Juan River valley of the Colorado Plateau region. If nothing else it is significant in that regard. Today, however, the Illustrated American expedition is a largely forgotten and unknown episode in the Four Corners area of the American Southwest. Only two authors briefly mention and give a comparatively short description of the exploring party. This present book includes not only reprints of the fourteen Illustrated American articles themselves, but also accounts based on stories done by some of the expedition members for other publications and two existing diaries kept during the survey. Also included are some of the drawings done while the party was in the field as well as half-tone

illustrations made at The Illustrated American in New York from photographs taken during the expedition. All of these appeared in the original 1892 Illustrated American articles. Supplementing these will be modern-day photographs of many of the sites visited by the exploring party. These were taken by photographer and fellow historian Mike S. Ford. Hopefully, this account will help to bring the Illustrated American Exploring Expedition back into historical focus.

plants. Common problems and the recommended operator responses are listed in tabular form for individual unit processes. Entry level operators will benefit greatly from the problems Tillman addresses, while experienced operators will appreciate it as a handy reference. The information compiled in this volume has been collected from various equipment manufacturers' operation and maintenance manuals, U.S. Environmental Protection Agency (EPA) technology transfer documents, the authors personal experience as a plant Operations and Maintenance manual writer, and his experience as a plant manager and operator. He includes only the most common wastewater treatment unit processes. He gives an overview of the treatment objective of the unit process, and then provides each with a troubleshooting table divided into Indicators/Observations: Possible Cause; Check or Monitor; Possible Solutions columns.

This exceptionally detailed and authoritative atlas of a major Civil War campaign is a superb leader development tool and educational reference, providing a heavy dose of tactical detail and a significant focus on the operational level of war. The campaign provides a host of issues to be examined: campaign

planning, deception, intelligence, leadership, logistics, reconnaissance (or lack thereof), soldier initiative, and many other areas relevant to the modern military professional. Additional issues, somewhat unique to Missouri in the American Civil War, are guerilla and counter-guerilla operations, operations in support of civil authorities, challenging local and state political considerations, and a resource constrained environment. Each of these issues is as relevant to us today as was 150 years ago. In short, modern military professionals, for whom this atlas was written, will find a great deal to ponder and analyze when studying this campaign.

order differential operators with a non-negative characteristic form on the one hand and Markov processes on the other, many problems in PDE's can be reformulated as problems for corresponding stochastic processes and vice versa. In the present book four classes of problems are considered: - the Dirichlet problem with a small parameter in higher derivatives for differential equations and systems - the averaging principle for stochastic processes and PDE's - homogenization in PDE's and in stochastic processes - wave front propagation for semilinear differential equations and systems. From the probabilistic point of view, the first two topics concern random perturbations of dynamical systems. The third

topic, homogenization, is a natural problem for stochastic processes as well as for PDE's. Wave fronts in semilinear PDE's are interesting examples of pattern formation in reaction-diffusion equations. The text presents new results in probability theory and their application to the above problems. Various examples help the reader to understand the effects. Prerequisites are knowledge in probability theory and in partial differential equations.

The beginnings of this book came about from the development of various different products, including the Scan-1 Scan-Tool Diagnostic System and the OBD-2 secret weapon diagnostic software by the same author. After development a large amount of

information had been accumulated and it was then decided to put it on a book series. All DTCs we acquired from a large bank of ECMs converted to test the development of the Scan-1. As a result, the backward engineering of the DTCs was possible and allowed us to compile the largest selection of factory codes (DTCs) on record. All DTC definitions in this book series are the result of such development. Coincidentally from our OBD-2 secret weapon software, we derived the technology to develop easy to understand flowcharts. Although these products did not have flowcharts, the program algorithm or logic allowed us to convert into flowcharts fairly quick. Our flowcharts were developed by our team from our
