learners the vital computing skills they need for the changing digital world. Each unit builds a series of skills towards the creation of final project, with topics ranging from programming simple computer games to creating an online yearbook.

Foundation of Information Technology is a judiciously developed series of textbooks on the syllabus devised by the Central Board of Secondary Education for classes 9 and 10. Keeping in mind the grasping power of the students, the books focus on the relevant theory and its applications and practical learning through sequential steps, rather than the elaborate textual study

for chapters. Each book is divided into chapters that are self-explanatory and encompass the relevant concepts of the topic concerned. The books do not contain any repetitive content and hence are crisp and condensed. The exercises at the end of the chapters call for active and attentive participation of the learners thereby testing their knowledge and helping in self-assessment. The CCE format of the questions appearing in CBSE exam papers has been followed in developing exercises in the book. There are separate books on MS Office 2010 and OpenOffice in class 9.

The author had identified six 'Foundations Pillars' that are the essential and minimum requirements for all nations, to ensure development and improvements for all their citizenry. These are appropriate building blocks, regardless of the type of government the nation has, or the level of

industrialisation and progress of their economy. This book focuses on India; it provides a dimension to the already ignited and meaningful discussion and debate for the 2014 Indian General Elections. It focuses on national and regional level issues to identify longer-term sustainable changes that are required for the essential improvements in India, for the benefit of all its citizens. Building on the principle of Ashoka's Pillar and stone inscribed edicts found across South Asia, this book aims to engage citizens to the key priorities and importance of the six

'Foundation Pillars' that form the basis of national transformational changes that are necessary to ensure improvements for all our citizens. Using the analogy of a house, a house we name India, these priorities form the six 'Foundation Pillars' on which the new 'House of India' can be built, they are the necessary components before citizens can the build a new Indian super-structure 'house' above ground. The weaker these 'Foundation Pillars', the greater the chance of unevenness and movement, and consequently, that the building blocks above ground will crack,

damage and eventually either need rebuilding or redesigning. The Indian approach, in many aspects follows behaviour of 'build-neglect-rebuild', where they build something, not necessarily to last, but sufficient for a period, neglect it, and then have to rebuild it, as by that time it is beyond repair. This is where the author believes India is at the moment, and this case study focuses on what citizens could do to change this for their benefit.
