serve as a reference for larger audience such as systems architects, practitioners, developers, new researchers and graduate level students. This area of research is relatively recent, and as such has no existing reference book that addresses it. This book will be a timely contribution to a field that is gaining considerable research interest, momentum, and is expected to be of increasing interest to commercial developers. The book is targeted for professional computer science developers and graduate students especially at Masters level. As Cloud Computing is recognized as one of the top five emerging technologies that will have a major impact on the quality of science and society over the next 20 years, its knowledge will help position our readers at the forefront of the field.

It offers case-studies of three twelfth-century Anglo-Norman historians: William of

Malmesbury, Henry of Huntingdon, and Geoffrey of Monmouth. It argues that the contemporary success and rapid attainment of canonical authority for their histories was in significant measure the result of successfully conducted publishing activities. These activities are analysed using the concept of a 'publishing circle'. This concept, it is suggested, may have wider utility in the study of authorial publishing in a manuscript culture. Monasticism, in all of its variations, was a feature of almost every landscape in the medieval West. So ubiquitous were religious women and men throughout the Middle Ages that all medievalists encounter monasticism in their intellectual worlds. While there is enormous interest in medieval monasticism among Anglophone scholars, language is often a barrier to accessing some of the most important and groundbreaking research emerging from Europe. The Cambridge History of Medieval Monasticism in the Latin West offers a comprehensive treatment of medieval monasticism, from Late Antiquity to the end of the Middle Ages. The essays, specially commissioned for this volume and written by an international team of scholars, with contributors from Australia, Belgium, Canada, England, France, Germany, Italy, the Netherlands, Spain, Switzerland, and the United States, cover a range of topics and themes and represent the most up-to-date discoveries on this topic.

This edited book focuses on affordances and limitations of e-books for early language and literacy, features and design of e-books for early language and literacy, print versus e-books in early language and literacy development, and uses of and guidelines for how to use e-books in school and home literacy practices. Uniquely, this book includes critical reviews of diverse aspects of e-books (e.g., features) and e-book uses (e.g., independent reading) for early

literacy as well as multiple examinations of e-books in home and school contexts using a variety of research methods and/or theoretical frames. The studies of children ' s engagement with diverse types of e-books in different social contexts provide readers with a contemporary and comprehensive understanding of this topic. Research has demonstrated that ever-increasing numbers of children use digital devices as part of their daily routine. Yet, despite children ' s frequent use of e-books from an early age, there is a limited understanding regarding how those e-books are actually being used at home and school. As more e-books become available, it is important to examine the educational benefits and limitations of different types of e-books for children. So far, studies on the topic have presented inconsistent findings regarding potential benefits and limitations of e-books for early literacy activities (e.g., independent reading, shared reading). The studies in this book aim to fill such gaps in the literature.

Winner of the 1997 ARNOVA Award for Distinguished Book in Nonprofit and Voluntary Action Research The private third sector has largely displaced public universities and bureaucracies as Latin America's leaders in social science and related policy activities. In many nations, these private research centers have become the main workplace for intellectuals. Mostly think tanks, they are influential political institutions, often making strong contribution to democratization. The success of these research centers marks an unsurpassed triumph for international philanthropy, but it also raises questions about the proper role and structural home for research and advanced study. Levy shows how the centers' success often undermine a region's struggling universities while failing themselves to fulfill higher education's fundamental mission. Levy deals broadly with regional developments, yet systematically identifies and analyzes the crucial subpatterns. He integrates impressive empirical data with conceptual perspectives on nonprofit organizations, comparative politics, and comparative education as well as Latin American studies.
