This publication is one of a series of handbooks prepared by the United Nations Statistics Division (UNSD) to help countries, particularly developing countries, implement the 1993 system of national accounts (SNA). It attempts to cover the conceptual and practical aspects of linking business accounts to national accounts through countries' experiences. The handbook aims to provide a general guide to business accounts and the possibility of linking items in them to SNA concepts allowing for local rules and regulations. It cannot provide a set of concrete and detailed international guidelines due to the diversity of business account standards among countries and the extent to which business accounts are made available to statisticians. The main target audiences for this handbook are staff responsible for the compilation of national accounts although it is also a useful reference tool for those who prepare statistics for the preparation of national accounts.

This book is exceptional in the sense that it provides an introduction to law in general rather than the law of one specific jurisdiction, and it presents a unique way of looking at legal education. It is crucial for lawyers to be aware of the different ways in which societal problems can be solved and to be able to discuss the advantages and disadvantages of different legal solutions. In this respect, being a lawyer involves being able to reason like a lawyer, even more than having detailed knowledge of particular sets of rules. Introduction to Law reflects this view by focusing on the functions of rules and on ways of arguing the relative qualities of alternative legal solutions. Where 'positive' law is discussed, the emphasis is on the legal questions that must be addressed by a field of law and on the different solutions which have been adopted by, for instance, the common law and civil law tradition. The law of specific jurisdictions is discussed to illustrate possible answers to questions such as when the existence of a valid contract is assumed.

Current evidence points to management accountants using traditional software (such as spreadsheets) for budgeting, ABC, balanced scorecards and other performance management techniques independent of, rather than integrated with Enterprise Resource Planning (ERP) Systems. While there has been some limited research on the effects of ERP systems on management accountants, this report provides a comprehensive analysis of the consequences of implementation of ERP systems for management accountants. • This report provides a theoretical basis for studying the impact of Enterprise Resource Planning (ERP) systems on management accounting and provides critical insights into the opportunities provided by ERP systems for the most efficient use of management accounting techniques. • The seven UK case studies of ERP implementations reveal the correlation between the success of the system implementation and the development of the role of management accountants in business partners thereby identifying the changes and skills required of management accountants. • The book provides guidance to management accountants on the changes they need to make in order to achieve the most from an ERP system implementation.

Mathematics Across Cultures: A History of Non-Western Mathematics consists of essays dealing with the mathematical knowledge and beliefs of cultures outside the United States and Europe. In addition to articles surveying Islamic, Chinese, Native American, Aboriginal Australian, Inca, Egyptian, and African mathematics, among others, the book includes essays on Rationality, Logic and Mathematics, and the transfer of knowledge from East to West. The essays address the connections between science and culture and relate the mathematical practices to the cultures which produced them. Each essay is well illustrated and contains an extensive bibliography. Because the geographic range is global, the book fills a gap in both the history of science and in cultural studies. It should find a place on the bookshelves of advanced undergraduate students, graduate students, and scholars, as well as in libraries serving those groups.

This book presents the views of accounting educators, accounting education policy-makers, and accounting practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university education. Accounting is a relatively new subject within universities and has been absorbed into a high level of education without any real attempt to do so within the traditional ethos of a liberal arts education. In this book, the logic of teaching using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has formed the foundation of accountancy courses for many years. A proposal to change this established practice, by integrating the liberal arts into the university accounting curriculum, is followed by a series of short chapters which address the relevance, validity and worthiness of the proposed approach. Comments and counter-arguments are then discussed before further chapters illustrate how the proposed change may be achieved in a variety of different contexts - ranging from that of the global financial crisis (which began in 2008) to the inclusion of ethics and sustainability within the accounting curriculum. This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of the accounting curriculum. This book was originally published as a special issue of Accounting Education: an international journal.

The Handbook of Applied Expert Systems is a landmark work dedicated solely to this rapidly advancing area of study. Despite scientific evidence that business-as-usual is unsustainable, there is a huge and widespread inertia to 'greening' the planet. Warming to Ecocide considers climate change from a thermodynamic perspective and asks whether market-driven organisations have carried us to the point of no return through the flawed economics of endless growth. Warming to Ecocide begins by exploring the thermodynamic origins of climate change. It demonstrates that equilibrium thermodynamics can provide full explanations for the basic processes of life such as photosynthesis and metabolism, and that non-equilibrium thermodynamics is close to providing an explanation for how life started. Armed with a solid appreciation of the power of thermodynamics, the second half of Warming to Ecocide discusses whether multinational corporations have convinced the public that climate change is insignificant and thereby neutered any all attempts by governments to espouse environmentally-friendly policies. It then goes on to offer strategies whereby mankind may avoid propelling the global average temperature above the pre-industrial level by more than 2°C, which scientists view as a threshold presaging catastrophic run-away processes.

This new edition of Frank Wood's A-Level Accounting has been brought up-to-date with the latest syllabus changes and developments in the field. It covers the more advanced aspects of the syllabus and builds on a first-course in the subject, tackling the more advanced aspects of company accounting such as group accounts, and the basics of management accounting. As well as providing instruction and practice in the preparation of accounting information, the text stresses the need for students to understand the business reasons behind the accounting techniques. A continuing strength of the book is the large amount of question material provided for practice. Recent past questions from the main examining bodies are included, as well as a useful guide to examination technique at A-Level.

Accounting for Business is print only. Written in clear and uncomplicated language, the new edition of Accounting for Business guides non-accounting students through the basic accounting concepts. Now up-dated to cover the GST, new tax laws and the VET training package, this is the ideal resource for students needing to cover the key accounting elements but not requiring the depth of a more traditional textbook.

A Washington Post Bestseller Three Principles for Managing—and Avoiding—the Problems of Growth Why is profitable growth so hard to achieve and sustain? Most executives manage their companies as if the solution to that problem lies in the external environment: find an attractive market, formulate the right strategy, win new customers. But when Bain & Company's Chris Zook and James Allen, authors of the bestselling Profit from the Core, researched this question, they found that when companies fail to achieve their growth targets, 90 percent of the time the root causes are internal—not external—increasing distance from the front lines, loss of accountability, proliferating processes and bureaucracy, to name only a few. What's more, companies experience a set of predictable internal crises, at predictable stages, as they grow. Even for healthy companies, these crises, if not managed properly, stifle the ability to grow further—and can actively lead to decline. The key insight from Zook and Allen's research is that managing these choke points requires a “founder's mentality”—behaviors typically embodied by a bold, ambitious founder—to restore speed, focus, and connection to customers: • An insurgent's clear mission and purpose • An unambiguous owner mindset • A relentless obsession with the front line Based on the authors' decade-long study of companies in more than forty countries, The Founder's Mentality demonstrates the strong relationship between these three traits in companies of all kinds—not just start-ups—and their ability to sustain performance. Through rich analysis and inspiring examples, this book shows how any leader—not only a founder—can instill and leverage a founder's mentality throughout their organization and find lasting, profitable growth.

Now in its fifth edition, this successful text introduces the basic principles and underlying concepts of accounting and finance. It adopts a practical, non-technical approach, making it the ideal text for students from non-accounting disciplines. The text is written from a 'user' perspective, demonstrating ways in which accounting statements and financial information can be used to improve the quality of decision making.
