This volume republishes sixty-two of Dewey's writings from the years 1942 to 1948; four other items are published here for the first time. A focal point of this volume is Dewey's introduction to his collective volume *Problems of Men*. Exchanges in the *Journal of Philosophy* with Donald C. Mackay, Philip Blair Rice, and with Alexander Meiklejohn in *Fortune* appear here, along with Dewey's letters to editors of various publications and his forewords to colleagues' books. Because 1942 was the centenary of the birth of William James, four articles about James are also included in this volume.

This book resulted from the series of lectures delivered at the Liberal Summer School at Oxford in the first ten days of August 1922. Being devoid of any influences of the political representatives of the Liberal Party, these readings were inspired and organized by individuals who concluded that it was desirable to create a platform upon which such discussion could be carried on. Accordingly, the lectures touch upon such important topics as free trade, unemployment, regulation of wages, the balance of power, colonies, land, and agriculture.

A Tribute to Professor D. H. Hey and Professor W. A. Waters

This volume collects twenty-two major essays by Werner Wolf published between 1992 and 2014, which have contributed to establishing 'intermediality' as an internationally recognized research field, providing a widely accepted typology of the field and opening intermedial perspectives on areas as varied as narratology, metareferentiality and iconicity.

G. A. Cohen was one of the most gifted, influential, and progressive voices in contemporary political philosophy. At the time of his death in 2009, he had plans to bring together a number of his most significant papers. This is the first of three volumes to realize those plans. Drawing on three decades of work, it contains previously uncollected articles that have shaped many of the central debates in political philosophy, as well as papers published here for the first time. In these pieces, Cohen asks what egalitarians have most reason to equalize, he considers the relationship between freedom and property, and he reflects upon ideal theory and political practice. Included here are classic essays such as "Equality of What?" and "Capitalism, Freedom, and the Proletariat," along with more recent

contributions such as "Fairness and Legitimacy in Justice," "Freedom and Money," and the previously unpublished "How to Do Political Philosophy." On ample display throughout are the clarity, rigor, conviction, and wit for which Cohen was renowned. Together, these essays demonstrate how his work provides a powerful account of liberty and equality to the left of Ronald Dworkin, John Rawls, Amartya Sen, and Isaiah Berlin.

Whether it is a result of nature, the consequence of a choice to escape the state of nature, or the outcome of some other process of deliberation, the fact of human association gives rise to recurrent themes in political and social philosophy. The character and requirements of justice, the profile of political legitimacy, and the relationship between the powers of government and the rights of the governed are some of the subjects of ongoing consideration and debate in the disciplines of philosophy, political theory, economics, and law. This volume represents a contribution to the investigation of these issues of perennial interest and import, featuring essays whose authors hope to extend, deepen, and, in some cases, move in new directions, the current state of discussion.

There is free thought, free choice, the free world - and then there is free stuff. By tracking the transformations of just one idea, "free," this book describes an arc of thought through a "reevaluation of values" and offers its critique in the same gesture.

Teaching writing as part of a building activity provides students with an easy to remember image that helps them understand and apply good writing construction. This building process helps them see how each writing block sets the foundation for the next block; as a result, their confidence in writing skills grows. The first foundational block is writing correct sentences, the second, writing effective paragraphs, and finally writing effective essays. Just as actual foundations require raw materials, so does each writing building block require specific elements. For example, in grammar, to build a correct sentence, you need nouns, verbs, prepositions,

conjunctions, and other grammatical elements. As the third book of the Building Better series, Building Better Essays builds on students' knowledge of effective paragraph construction, covered in Building Better Paragraphs, to get them to the next step of putting paragraphs together successfully for coherent essays. Many writing books present content in too complex a manner without enough opportunities for practice or present so many topics that simply overwhelm the student. The Building Better series evolved to be flexible enough that they can also be used as a quick reference guide by all college students or writing instructors. Any student who needs help writing concise and clear essays can benefit from the pedagogy of Building Better Essays. Instructors looking for a rich focus on essay construction, simple and brief explanations that are easy to remember, and variety of practice exercises will find it in Building Better Essays. How does one help undergraduate students learn quickly how to produce effectively organized, persuasive, well-reasoned essays? This book offers a straightforward, systematic introduction to some of the key elements of the construction of arguments in essay form. The focus here is on practical advice that will prove immediately useful to students—recommended procedures are emphasized, and detailed examples of academic and student writing are provided throughout. The book introduces the basics of argumentation before moving on to the structure and organization of essays. Planning and outlining the essay, writing strong thesis statements, organizing coherent paragraphs, and writing effective introductions and conclusions are among the subjects discussed. A separate section concisely explores issues specific to essays about literary works.

Free logic - i.e., logic free of existential presuppositions in general and with respect to singular terms in particular- began to come into its own as a field of research in the 1950s. As is the case with so many developments in Western philosophy, its roots can be traced back to ancient Greek philosophy. It is only during the last fifty years, however, that it has become well established as a branch of modern logic. The name of Karel Lambert is most closely connected with this development: he gave it its name and its profile as a well defined field of research. After a development of fifty years, it is time to look back and take stock while at the same time scanning for new perspectives. This is the purpose of the papers collected in this volume. The first paper is written by Karel Lambert himself who also

comments on all the papers of the other authors. In an introductory essay we give a survey of the present status of and new directions in free logic.
