At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Pharmacology for Nurses - E-Book

Pharmacology is a notoriously difficult subject, particularly in nursing school where students must speed through the entire subject in just one semester.

Despite the lack of time spent on the subject, the importance of pharmacology cannot be overstated. As we all know, medication errors can kill. What makes pharmacology such a difficult subject? The sheer volume of information and lack of readily apparent connections. Shortly after initial exposure to pharmacology, students enter survival mode; which means they do their best to ascertain what will be on the exam and then focus all of their time and energy on memorizing that information. This is a mediocre short-term strategy and a horrible long-term strategy. Heckman's Nursing Pharmacology Simplified is here to help. Rather than overwhelm you with seemingly random lists of facts and acronyms, we carefully select key information and present it in a way that is logical and easy to digest. We emphasize core themes and focus on helping you make lasting connections. To ensure brevity and clarity, we tackle pharmacology one drug class at a time and limit the information to one page per drug class. The result is an extraordinarily high-impact pharmacology review. Written by a pharmacist to help nurses. It's nursing pharmacology SIMPLIFIED.

Written in the award-winning Incredibly Easy! style, this book provides complete and clear explanations of how drugs act and interact in the treatment of disease. Focusing on mechanisms of drug action, the book details specific drugs by pharmacologic class for all body systems as well as drugs for pain, psychiatric disorders, infection, fluid and electrolyte imbalances, and cancer. Potentially dangerous drug and drug-herb interactions are highlighted. This thoroughly updated edition covers the newest drugs in each pharmacologic class and includes information on obesity drugs, a new chapter on genitourinary system drugs, a new medication safety feature, and a new appendix on common herbal preparations and their drug interactions.

These test-yourself review cards put critical clinical information for nearly 400 of the top generic medications.

inflammation, infection and cancer as well as a systems-based consideration of the pathophysiology and relevant pharmacology of common disorders. Providing the ideal starting point for student nurses to develop a robust, integrated knowledge of human disease and pharmacology, this book will enable them to provide care based on up-to-date knowledge of this important subject.

Accompanying CD-ROM contains a 265-question examination with rationales and test-taking tips for additional review.

Nurse prescribers are now practising within every discipline of nursing and midwifery, both in the community and the hospital setting. This much-needed book is aimed particularly at students on a non-medical prescribing (NMP) course as well as those nurses who are studying for their community practitioner non-medical prescribing qualification as part of the specialist practice programme. The book is also a useful resource for nursing students and registered nurses who administer and/or prescribe medicines. The authors offer a basic introduction to pharmacological concepts, embedded in specific conditions, through case studies and self-assessment questions. By utilising a case study approach, they enable the reader to link pharmacological concepts with clinical practice. Many of the conditions presented will be seen across all healthcare settings. In addition, the comprehensive glossary and list of abbreviations will enable students to understand some of the more technical terms used in the British National Formulary (BNF) and other prescribing sources. Reading this book, and carrying out the numerous self-assessment activities, will give the reader an appreciation of the value of having a sound pharmacological knowledge base in order to deliver safe practice, effective prescribing and improved patient care. Contents include: Introduction How the body affects drugs How drugs affect the body Types of adverse drug reactions and interactions Understanding and using the British National Formulary Adherence Children Stable angina Hypertension Heart failure Chronic obstructive pulmonary disease Neurological problems Gastrointestinal disorders Incontinence in adults Diabetes Mental health problems Eye problems Complex health needs and polypharmacy Palliative care The challenges of non-medical prescribing

For courses in pharmacology. A holistic approach to pharmacology essentials Pharmacology for Nurses: A Pathophysiologic Approach simplifies pharmacology by linking it tightly to

therapeutic goals. Instead of learning about drugs in isolation, students approach them by body systems and diseases in order to draw connections between A&P, diseases, and drug interventions. Engaging features and exercises relate pharmacology to nursing care, while discussion of alternative therapies and cultural and lifespan considerations give further context for clinical decisions. The 6th edition adds the most current pharmacotherapeutics and advances in pathophysiology.
