Nurses and midwives have a professional responsibility to keep up-to-date with current research impacting on their clinical practice. They require the skills and knowledge to read and understand research reports, evaluate the quality of the research, synthesise different research studies, apply the most appropriate findings to their clinical practice and be able to evaluate its effectiveness. This book presents a unique approach to teaching the principles of health research using practical case studies with which students can identify and engage. The book covers core concepts and principles including: - what evidence is and why understanding research is vital - finding reliable sources of evidence - the nature of the research process - understanding quantitative and qualitative research - ethical considerations - using research to guide clinical practice. Throughout the book, activities, summaries and review questions help ground theory in real life scenarios, highlighting how evidence-based practice can be applied in every aspect of nursing care. 'The text is highly readable while achieving the aim of familiarising the reader with the language of, and process for, doing research. It is logically organised and ... guides reader learning using a variety of techniques that reinforce [the] information presented and challenge thinking.' About: To prepare you for real world practice, this book will highlight content areas most relevant to the bedside and why they must be mastered and understood. To help visualize the professional development that is needed as you transition to the responsibilities of the professional nurse, I use the metaphor of building a house; not a static structure, but a unique, vibrant "living" house that is a reflection of how you choose to build and add to it over time. Nursing is a living and vibrant practice that requires your personal involvement and engagement to promote the well-being of those you care for. The components of this "living" home include: Foundation: A house must have a firm and stable foundation. The ethical comportment or the art of nursing is this foundation for every nurse. Caring behaviors, nurse engagement, and professionalism in practice must be present or your nursing practice could be on shaky ground before it even begins! Walls: The applied sciences of nursing: pharmacology, fluid and electrolytes, and anatomy and physiology. I contextualize these sciences to the bedside so the relevance of mastering this content becomes apparent. Roof: Critical thinking and clinical reasoning, which is the thinking that is required by the nurse that completes the house and ties everything together. Skeletons in the closet: Every house has closets and some have a few skeletons in them! Incivility and men in nursing will be explored in detail!

It will be kept by nursing students long after they graduate as a guide to resources that will be valuable throughout their nursing careers. As a home care nurse working mainly with the geriatric community, I found the resources helpful in my practice. As an instructor, I found the book to be a very useful guide for teaching geriatrics." An excellent resource for faculty (staff educators) to facilitate critical learning skills." —Liz Capezuti, PhD, RN, FAAN Dr. John W. Nursing Case Studies

Fundamentals of Nursing Test Success

Tap into 150 unique case studies covering all four clinical practice areas: medical-surgical, pediatric, OB/maternity, and psychiatric nursing, all newly organized to facilitate a conceptual approach to teaching and learning. Each case covers a common patient problem, drawn from actual clinical experiences and written by nurses who are clinical experts. Cases include integrated content on pharmacology, nutrition, and diagnostic/laboratory tests to encourage you to think critically about all aspects of patient care. The 7th edition features a new concept-based organization, an enhanced focus on interprofessional collaboration and QSEN, 20 all-new case studies, and updated content throughout to reflect the most current standards of clinical practice.

This book uses the latest research findings to apply critical thinking processes for the development of diagnostic reasoning and the selection of patient outcomes and nursing interventions. Four chapters describe the meaning of intelligence, critical thinking, and application of critical thinking processes within nursing. The case studies and their ultimate resolution to intervention and outcome illustrate these processes by enabling repeated practice. Case studies are organized into four sections; problem diagnoses, risk diagnoses, health promotion diagnoses, and strength diagnoses. A companion website provides on-line resources.
