This IBM® Redpaper publication provides all the necessary steps to successfully install Red Hat OpenShift 4.4 on IBM Z® or LinuxONE servers. It also provides an introduction to OpenShift nodes, Red Hat Enterprise Linux CoreOS, and Ansible. The steps that are described in this paper are taken from the official pages of the Red Hat website. This IBM Redpaper publication was written for IT architects, IT specialists, and others who are interested in installing Red Hat OpenShift on IBM Z. Microformats are HTML-based design patterns that help add meaning (semantics) to Web content. They are widely used by some of the most important sites on the Web including Google, Yahoo!, Facebook, and Twitter. The people behind these sites - content authors, designers and developers - understand the power and flexibility of microformats and are taking advantage of their capabilities. Any site can benefit from more effective content and improved user experience by employing microformats correctly. That's where this book excels. In **Microformats Made Simple**, author Emily Lewis demystifies these simple open data formats that are designed for people first, machines second. With practical, easy-to-understand markup examples for a wide range of web content, she teaches readers everything they need to know to start adding semantic richness to their sites, which can improve SEO and standards compliance, and supports extensible data publishing. Emily also discusses historical challenges in working with microformats, including accessibility, and how the new value class pattern addresses these challenges.

The idea of the organization of a Symposium on Spiral Structure came at a special meeting of Commission 33 on Spiral Structure during the 12th General Assembly of the IAU in Prague, 1967. So much interest was shown during this meeting that one of us proposed a special Symposium on the 'Spiral Structure of Our Galaxy' for 1969. The response was immediate and it was finally agreed upon holding the Symposium in Basel, a center of galactic research in the center of Europe. During the next months a special 'List of Problems', related to this Symposium, was sent to many prospective participants by the president of Commission 33. This stimulated an increase of interest in problems of galactic spiral structure and a concentrated effort on some problems. The organizing Committee of the Symposium was composed of Drs. L. Woltjer (president), W. Becker, A. Blaauw, B. J. Bok, G. Contopoulos, F. J. Kerr, C. C. Lin, S. W. McCuskey and S. B. Pikel'ner. Most of the work for the organization of the Symposium was carried by Dr. L. Woltjer. The Local Committee, composed of Drs. W. Becker, U. W. Steinlin, R. P. Fenkart, and G. A. Tammann, made every effort to secure the success of the Symposium. Most of the credit goes to Dr. Steinlin. The Symposium was supported financially by the IAU and by the Swiss National Science Foundation. The meetings took place at the University of Basel, which provided also secretarial help and many other facilities.

DISCOVER HOW LIFE REALLY WORKS - ON EARTH AND IN SPACE 'A wonderfully insightful sidelong look at Earthly biology' Richard Dawkins 'Crawls with curious facts' Sunday Times _____ We are unprepared for the greatest discovery of modern science. Scientists are confident that there is alien life across the universe yet we have not moved beyond our perception of 'aliens' as Hollywood stereotypes. The time has come to abandon our fixation on alien monsters and place our expectations on solid scientific footing. Using his own expert understanding of life on Earth and Darwin's theory of evolution - which applies throughout the universe - Cambridge zoologist Dr Arik Kershenbaum explains what alien life must be like. This is the story of how life really works, on Earth and in space. _____ 'An entertaining, eye-opening and, above all, a hopeful view of what - or who - might be out there in the cosmos' Philip Ball, author of Nature's Patterns 'A fascinating insight into the deepest of questions: what might an alien actually look like' Lewis Dartnell, author of Origins 'If you don't want to be surprised by extraterrestrial life, look no further than this lively overview of the laws of evolution that have produced life on earth' Frans de Waal, author of Mama's Last Hug

Sir William Herschel's contributions to astronomy during the late eighteenth century are unrivalled. His lasting legacy is his dedicated all-sky survey of star clusters and nebulae, and these objects continue to be among the most studied in the night sky. This unique book provides a complete re-examination of Herschel's entire catalogue of non-stellar discoveries, making it the most accurate and up-to-date reference of its kind. Retrace the footsteps of one of history's greatest astronomers and explore every one of Herschel's landmark discoveries, including those considered to be lost or non-existent. Read detailed notes about each object's appearance and physical characteristics, and view hundreds of photos of the most intriguing Herschel objects, along with dozens of sketches of what is visible at the eyepiece. This superb book is a must-have for amateur astronomers seeking new and exciting observing challenges, and as the ultimate reference on the Herschel objects.

Norwegian Modals is a detailed description of the syntactic and semantic properties of modals in Norwegian. Modal verbs in Mainland Scandinavian languages have received much less attention than their English and German counterparts, hence this book seizes the opportunity to present a range of new data and generalizations relevant for the study of Scandinavian languages, but also for the study of modality in Germanic and other languages. The book critically evaluates a range of proposals from the modality literature, focusing on the Theta-properties and the scopal properties of Modals in Germanic languages, and concludes that none of these previous proposals are able to account for the syntax of modals in Norwegian. The Theta-properties of modals are shown to depend on the construction in which the modal occurs, hence neither a raising analysis, a control analysis, nor a raising-versus-control analysis in fact suffices to exhaust these properties of Norwegian modals. The interplay of modals with tense and aspect is likewise thoroughly investigated, presenting a range of data revealing that existing universalist proposals are insufficient to account for even quite regular patterns. Instead, a new analysis is presented, building on a new compositional tense system which exploits aspectual features of predicates and selectional preferences of modal classes.
