The charm of Mathematical Physics resides in the conceptual difficulty of understanding why the language of Mathematics is so appropriate to

formulate the laws of Physics and to make precise predictions. Citing Eugene Wigner, this "unreasonable appropriateness of Mathematics in the Natural Sciences" emerged soon at the beginning of the scientific thought and was splendidly depicted by the words of Galileo: "The grand book, the Universe, is

written in the language of Mathematics.”
In this marriage, what Bertrand Russell
called the supreme beauty, cold and
austere, of Mathematics complements the
supreme beauty, warm and engaging, of
Physics. This book, which consists of nine
articles, gives a flavor of these beauties
and covers an ample range of
