***There are dozens of other funding directories describing college aid. But, none of them are like this one. First, unlike other directories, the High School Senior's Guide focuses only on merit and no-need scholarships. Not one of the programs covered here requires financial need. Plus, only programs open to college-bound high school seniors are included. No more scanning through hundreds of listings that apply to currently-enrolled college students, not to you. In addition, the entries here are grouped by discipline, so you can go directly to the area you want to study. Not sure what your major will be? No problem. There's even a section listing programs that are open to support studies in any area. The High School Senior's Guide provides the only way to find money for college based solely on academic record, writing or artistic ability, speech-making skills, athletic success, high school club membership, religious or ethnic background, parents' military or organizational activities, and even pure luck in random drawings. Perhaps that's why College Financial Aid gave the High School Senior's Guide 4 stars--its highest rating!***

This is the second edition of a very popular book on DICOM that introduces this complex standard from a very practical point of view. It is aimed at a broad audience of radiologists, clinical administrators, information technologists, medical students, and lecturers. The book provides a gradual, down to earth introduction to DICOM, accompanied by an analysis of the most common problems associated with its implementation. Compared with the first edition, many improvements and additions have been made, based on feedback from readers. Whether you are running a teleradiology project or writing DICOM software, this book will provide you with clear and helpful guidance. It will prepare you for any DICOM projects or problem solving, and assist you in taking full advantage of multifaceted DICOM functionality.

The IPO craze of the late 1990s has faded, but there are still a number of small, rapidly-growing companies in the USA. This text tells the story of 600 such companies, and features in-depth profiles for 100 of the companies. Also included are lists of fast-growing companies from top business publications.

Accompanying CD-ROM contains annex tables detailing population attributable fractions, mortality, and disease burden for selected major risk factors.

Wir sind umgeben von Kohlenhydraten: der süße Kaffee, Tee oder Dessert, die Stärke als Hauptkomponente unserer Nahrung und die Zellulose als Strukturelement in Pflanzen. Kohlenhydrate sind eine wichtige Klasse biologischer Moleküle, die an einer Anzahl wichtiger biochemischer Prozesse beteiligt sind. Gerade beginnen wir die Rolle von komplexen Zuckern zu verstehen, die an Proteine gebunden die Kommunikation von Zellen in einer "Zuckersprache" bewerkstelligen. Und nicht zuletzt kommen die ersten Kohlenhydratmoleküle als Medikamente auf den Markt. Anders als für andere Biopolymere sind die analytischen Methoden zur strukturellen Charakterisierung und Sequenzanalyse für Kohlenhydrate zur Zeit ungenügend, zum Teil wegen der überwältigenden Isotopenzahl der Zucker. Dieses Buch beschreibt die Entwicklung der letzten Jahre, die mit der Kapillarelektrophorese in Bezug auf eine miniaturisierte Analytik mit besserer Auflösung und Empfindlichkeit gemacht wurden. Instrumentierung, Derivatisierung, Trennbedingungen und Anwendungen in verschiedenen Disziplinen und Industrien wie z. B. Glykobiologie, Lebensmittelindustrie und Biotechnologie werden beschrieben.

**The second edition of a comprehensive introduction to machine learning approaches used in predictive data analytics, covering both theory and practice. Machine learning is often used to build predictive models by extracting patterns from large datasets. These models are used in predictive data analytics applications including price prediction, risk assessment, predicting customer behavior, and document classification. This introductory textbook offers a detailed and focused treatment of the most important machine learning approaches used in predictive data analytics, covering both theoretical concepts and practical applications. Technical and mathematical material is augmented with explanatory worked examples, and case studies illustrate the application of these models in the broader business context. This second edition covers recent developments in machine learning, especially in a new chapter on deep learning, and two new chapters that go beyond predictive analytics to cover unsupervised learning and reinforcement learning.**

**A contribution towards making this increasingly valuable technology accessible to researchers, including the students, post-doctoral scholars, and technicians gathering the knowledge inherent in this integration between analysis and physical isolation/purification methodologies. A step-by-step approach to the methodology for measuring various attributes demonstrated in the particular cells of interest is provided, as is a myriad of resources to fuel the curiosity and answer questions of both new and adept users. This book stems from the editors'experiences managing flow cytometry/cell sorting core facilities for the emerging researchers, in particular in developmental, cellular, and molecular biology.**
