

## Good Introductions Research Papers

This is an open access book. The book provides an overview of the state of research in developing countries - Africa, Latin America, and Asia (especially India) and why research and publications are important in these regions. It addresses budding but struggling academics in low and middle-income countries. It is written mainly by senior colleagues who have experienced and recognized the challenges with design, documentation, and publication of health research in the developing world. The book includes short chapters providing insight into planning research at the undergraduate or postgraduate level, issues related to research ethics, and conduct of clinical trials. It also serves as a guide towards establishing a research question and research methodology. It covers important concepts such as writing a paper, the submission process, dealing with rejection and revisions, and covers additional topics such as planning lectures and presentations. The book will be useful for graduates, postgraduates, teachers as well as physicians and practitioners all over the developing world who are interested in academic medicine and wish to do medical research.

Today, professionals treating psychiatric patients are being required to demonstrate quantitatively to the public & to government, insurance, & accrediting agencies that their treatment is based on patients' needs, is appropriate, & is cost-effective. An Introduction to Psychiatric Research provides tools for complying with these demands as well as for undertaking other sorts of scientific inquiries.

Provides information on stylistic aspects of research papers, theses, and dissertations, including sections on writing fundamentals, MLA documentation style, and copyright law.

A Course for Nonnative Speakers of English. Genre-based approach. Includes units such as graphs and commenting on other data and research papers.

Introduction of Research Methods and Publication Ethics

Understanding and Evaluating Research

Strategy and Steps

Academic Writing for Graduate Students

How to Practice Academic Medicine and Publish from Developing Countries?

*Umberto Eco's wise and witty guide to researching and writing a thesis, published in English for the first time. By the time Umberto Eco published his best-selling novel The Name of the Rose, he was one of Italy's most celebrated intellectuals, a distinguished academic and the author of influential works on semiotics. Some years before that, in 1977, Eco published a little book for his students, How to Write a Thesis, in which he offered useful advice on all the steps involved in researching and writing a thesis—from choosing a topic to organizing a work schedule to writing the final draft. Now in its twenty-third edition in Italy and translated into seventeen languages, How to Write a Thesis has become a classic. Remarkably, this is its first, long overdue publication in English. Eco's approach is anything but dry and academic. He not only offers practical advice but also considers larger questions about the value of the thesis-writing exercise. How to Write a Thesis is unlike any other writing manual. It reads like a novel. It is opinionated. It is frequently irreverent, sometimes polemical, and often hilarious. Eco advises students how to avoid “thesis neurosis” and he answers the important question “Must You Read Books?” He reminds students “You are not Proust” and “Write everything that comes into your head, but only in the first draft.” Of course, there was no Internet in 1977, but Eco's index card research system offers important lessons about critical thinking and information curating for students of today who may be burdened by Big Data. How to Write a Thesis belongs on the bookshelves of students, teachers, writers, and Eco fans everywhere. Already a classic, it would fit nicely between two other classics: Strunk and White and The Name of the Rose. Contents The Definition and Purpose of a Thesis • Choosing the Topic • Conducting Research • The Work Plan and the Index Cards • Writing the Thesis • The Final Draft*

*Introduction to Research and Medical Literature for Health Professionals, Fourth Edition is an essential resource to help students, faculty, and practitioners understand the research process, interpret data, comprehend results, and incorporate findings into practice. From choosing a research project and developing the research process design, to systematically gathering information, analyzing, interpreting data, differentiating among conflicting results, and finally understanding the overall evaluation, Introduction to Research and Medical Literature for Health Professionals, Fourth Edition will help students and practitioners develop research skills to acquire and contribute knowledge that benefits their patients.*

*‘A comprehensive, well-written and beautifully organized book on publishing articles in the humanities and social sciences that will help its readers write forward with a first-rate guide as good company.’ – Joan Bolker, author of Writing Your Dissertation in Fifteen Minutes a Day ‘Humorous, direct, authentic ... a seamless weave of experience, anecdote, and research.’ – Kathleen McHugh, professor and director of the UCLA Center for the Study of Women Wendy Laura Belcher's Writing Your Journal Article in Twelve Weeks: A Guide to Academic Publishing Success is a revolutionary approach to enabling academic authors to overcome their anxieties and produce the publications that are essential to succeeding in their fields. Each week, readers learn a particular feature of strong articles and work on revising theirs accordingly. At the end of twelve weeks, they send their article to a journal. This invaluable resource is the only guide that focuses specifically on publishing humanities and social science journal articles.*

*Focuses on students' needs for their Foundation studies across the healthcare disciplines. This book can be used together as a complete learning tool or individually as a dip-in reference guide. It is pitched at the right level for first year students or those on Return to Practice courses.*

*Research Methods in Health, Physical Education, and Recreation*

**This popular textbook provides a concise, but comprehensive, overview of health research as an integrated, problem-solving process. It bridges the gap between health research methods and evidence-based clinical practice, making it an essential tool for students embarking on research. Practitioners also benefit from guidance on interpreting the ever-expanding published research in clinical and scientific journals, to ensure their practice is up to date and evidence-based and to help patients understand information obtained online. "This textbook would be of interest and value both to undergraduate and post-graduate students also." Reviewed by Dr. Richard Ellis on behalf of the New Zealand Journal of Physiotherapy, January 2015 "...excellent at giving an introduction and overview into research methods." Reviewed by Tobias Bremer on behalf of InTouch, July 2015 Uses simple language and demystifies research jargon Covers both quantitative and qualitative research methodology, taking a very practical approach Gives examples directly related to the health sciences Each chapter contains a self-assessment test so that the reader can be sure they know all the important points Provides an extensive glossary for better understanding of the language of research Online interactive self-assessment tests: Multiple choice questions True or false questions Short answer questions Log on to evolve.elsevier.com/Polgar/research and register to access the above assets.**

**A step-by-step guide to conducting research in medicine, public health, and other health sciences, this clear, practical, and straightforward text demystifies the research process and empowers students (and other new investigators) to conduct their own original research projects.**

**In a research project, the most critical part is writing the report in a way which presents not just our findings, but the process through which we arrived at these findings. It demands honesty about our research design and our perspectives, so that others can understand not just the research we have produced, but something about the way in which we have produced it. When carrying out research it is all too easy to become embroiled in our own research questions and objectives, so that when it comes to presenting our research we forget about situating it within the wider body of knowledge. For the lack of proper knowledge, many people find it difficult to writing up their paper. This book is intended to help you organize and write a quality research paper for Social Sciences. This book also gives you the idea about research design.**

**This is a primary, comprehensive textbook for people who are considering undertaking a piece of health-related research. It is an accessible companion with the aim of getting the reader to think broadly about all of the issues that need to be considered when embarking on a project. This is a pragmatic book, a step-by-step guide to research which mirrors the structure of a research project, taking you through the thought process for designing and conducting your study from formulating the right research question at idea inception, ascertaining what methodologies and analysis can answer what type of questions, right through to dissemination, all presented in an easy, digestible style. The book is full of case study illustrations and practical tips such as how to work out a research budget and obtaining funding for your project, discussion of what permissions need to be obtained when conducting research with people, and how to involve public and patients. The authors are all experienced researchers and so this book is an accumulation of collective wisdom on common research challenges and issues.**

*Publishing your research in an international journal is key to your success in academia. This guide is based on a study of over 1000 manuscripts and reviewers' reports revealing why papers written by non-native researchers are often rejected due to problems with English usage and poor structure and content. With easy-to-follow rules and tips, and examples taken from published and unpublished papers, you will learn how to: prepare and structure a manuscript increase readability and reduce the number of mistakes you make in English by writing concisely, with no redundancy and no ambiguity write a title and an abstract that will attract attention and be read decide what to include in the various parts of the paper (Introduction, Methodology, Discussion etc) highlight your claims and contribution avoid plagiarism discuss the limitations of your research choose the correct tenses and style satisfy the requirements of editors and reviewers This new edition contains over 40% new material, including two new chapters, stimulating factoids, and discussion points both for self-study and in-class use. EAP teachers will find this book to be a great source of tips for training students, and for preparing both instructive and entertaining lessons. Other books in the series cover: presentations at international conferences; academic correspondence; English grammar, usage and style; interacting on campus, plus exercise books and a teacher's guide to the whole series. Please visit <http://www.springer.com/series/13913> for a full list of titles in the series. Adrian Wallwork is the author of more than 30 ELT and EAP textbooks. He has trained several thousand PhD students and academics from 35 countries to write research papers, prepare presentations, and communicate with editors, referees and fellow researchers.*

*'How to Write a Research Paper' is an intuitive guide, which is a gentle, friendly introduction into the esoteric world of academic writing. Whether you are an academic novice, or you simply want to brush up your skills, this book will take your academic writing skills to the next level.*

*Introducing the basic principles of research theory and practice, this book is the ideal starter text for any counselling trainee or practitioner learning about the research process for the first time. Structured around common training topics, the book: - Explains why you need to do research at all: what it is, why it's important and its historical and philosophical context - Guides you through the confusing mass of research literature - Covers the ins and outs of actually doing research: practical and ethical issues - Helps you get the most out of research - how to evaluate the outcomes and use research to investigate the process of therapy. Written in a language familiar to first-year trainees and using a range of features to enhance learning, this accessible introduction will equip both trainees and qualified therapists with the essential nuts and bolts to understand research. John McLeod is Emeritus Professor of Counselling at the University of Abertay Dundee and adjunct Professor at the University of Oslo, Norway.*

*Become a more competent consumer and producer of research with INTRODUCTION TO RESEARCH IN EDUCATION, 9th Edition! Known for its exceptionally clear writing style and comprehensive coverage, this research methods guide helps you master the basic competencies necessary to understand and evaluate the research of others. The authors familiarize you with common research problems in a step-by-step manner through examples that clarify complex concepts, supported by strong end-of-chapter exercises. This book is a must-read for anyone planning to conduct research or interpret the research of others. Available with InfoTrac Student Collections*

*"Montello and Sutton is one of the best texts I've used in seminars on research methodology. The text offers a clear balance of quantitative vs. qualitative and physical vs. human which I've found particularly valuable. The chapters on research ethics, scientific communication, information technologies and data visualization are excellent" – Kenneth E. Foote, Department of Geography, University of Colorado at Boulder This is a broad and integrative introduction to the conduct and interpretation of scientific research, covering both geography and environmental studies. Written for undergraduate and postgraduate students, it: Explains both the conceptual and the technical aspects of research, as well as all phases of the research process Combines approaches in physical geography and environmental science, human geography and human-environment relations, and geographic and environmental information techniques (such as GIS, cartography, and remote sensing) Combines natural and social scientific approaches common to subjects in geography and environmental studies Includes case studies of actual research projects to demonstrate the breadth of approaches taken It will be core reading for students studying scientific research methods in geography, environmental studies and related disciplines such as planning and earth science.*

*"Margaret Cargill's background as a linguist and research communications educator and Patrick O'Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling, well documented, clear narratives that convey their work honestly and in proper context, they have succeeded admirably." Veterinary Pathology, July 2009 "[The book is] clearly written, has a logical step-by-step structure, is easy to read and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing." Aquaculture International, April 2009 Writing Scientific Research Articles: Strategy and Steps guides authors in how to write, as well as what to write, to improve their chances of having their articles accepted for publication in international, peer reviewed journals. The book is designed for scientists who use English as a first or an additional language; for research students and those who teach them paper writing skills; and for early-career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments, as well as ideas for developing discipline-specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at [www.writeresearch.com.au](http://www.writeresearch.com.au) for more information.*

*In recent era scholars are often facing a regulations/guideline evolved for academics by various statutory bodies/ institutions. The scholars have to cope up with it and consistently keep their learning pace optimum. The idea of this book developed through in tune with the scholar's queries regarding the Ph.D. process.Thus, this book took shape with keeping all those queries/ ideas of scholar's in center. The first chapter of this book gives brief overview of research methods and statistical techniques with hands-on thumb rules and tips which is very important at initial stage of research process. The contents were chosen by keep in mind the significant point of view of research proposal and research report to provide an idea about how to start the research processes so that the stakeholders may get benefited. The second chapter exclusively focuses on the philosophical and ethical aspects with academic integrity. This section of book address about how nature and scope of philosophy and ethics is important in research processes and also gives an idea to address the philosophical and ethical approach involved. The third chapter provide the orientation towards approach of research with scientific conducts and misconducts. This chapter is essentially integrating in research process with focus on plagiarism. The fourth chapter of this book is solely based on publication ethics, which exclusively focuses on ethical behaviour towards the publication of research for authors, contributors, scholars etc. this chapter also gives overview to the reader on different violation of publication ethics and predatory publication as well. The Fifth chapter prepared by regarding various databases and a table of comparison based on various categories of research/academic terminologies.*

*Recipient of the 2012 School of Health Professions Outstanding Publication Award from UT Health Science Center at San Antonio Introduction to Research and Medical Literature for Health Professionals is an essential resource to help students, faculty, and practitioners understand the research process, interpret data, comprehend the results and incorporate the findings into practice. From choosing a research project, acquiring grant funding, and developing the research process design, to the systematic gathering of information, analysis, interpretation of data, differentiation between conflicting results, and finally understanding the overall evaluation - Introduction to Research and Medical Literature for Health Professionals will ease any fears and help students and practitioners to incorporate what is useful and best for their patients. Introduction to Health Research Methods

Guide to Publishing in Psychology Journals

Introduction To Library Research In German Studies

Provides immediate help for anyone preparing a biomedical paper by givin specific advice on organizing the components of the paper, effective writing techniques, writing an effective results sections, documentation issues, sentence structure and much more. The new edition includes new examples from the current literature including many involving molecular biology, expanded exercises at the end of the book, revised explanations on linking key terms, transition clauses, uses of subheads, and emphases. If you plan to do any medical writing, read this book first and get an immediate advantage.

This Second Edition of Diana Ridley’s bestselling guide to the literature review outlines practical strategies for reading and note taking, and guides the reader on how to conduct a systematic search of the available literature, and uses cases and examples throughout to demonstrate best practice in writing and presenting the review. New to this edition are examples drawn from a wide range of disciplines, a new chapter on conducting a systematic review, increased coverage of issues of evaluating quality and conducting reviews using online sources and online literature and enhanced guidance in dealing with copyright and permissions issues.

This indispensable guide takes students through each step of the essay writing process, enabling them to tackle written assignments with confidence. Students will develop their ability to analyse complex concepts, evaluate and critically engage with arguments, communicate their ideas clearly and concisely and generate more ideas of their own. Chapters are short and succinct and cover topics such as reading purposefully, note-taking, essay writing in exams and avoiding plagiarism. Packed with practical activities and handy hints which students can apply to their own writing, this is an ideal resource for students looking to improve the quality and clarity of their academic writing. This book will be a source of guidance and inspiration for students of all disciplines and levels who need to write essays as part of their course. New to this Edition: – Brand new chapters on topics such as learning from feedback, finding your voice and using the right vocabulary – Expanded companion website featuring videos, interactive exercises, sample essays and lecturer resources –

Exclusive web-only chapter on improving your memory

Introduction to Research Methods: A Hands-On Approach makes learning research methods easy for students by giving them activities they can experience and do on their own. With clear, simple, and even humorous prose, this text offers students a straightforward introduction to an exciting new world of social science and behavioral research. Rather than making research seem intimidating, author Bora Pajo shows students how research can be an easy, ongoing conversation on topics that matter in their lives. Each chapter includes real research examples that illustrate specific topics that the chapter covers, guides that help students explore actual research challenges in more depth, and ethical considerations relating to specific chapter topics. 3 Reasons Why You’ll Want to Read This Book 1. Conducting research can be fun when you see it in terms that relate to your everyday life. 2. Knowing how to do research will open many doors for you in your career. It will open your mind to new ideas on what you might pursue in the future (e.g., becoming an entrepreneur, opening your own nongovernmental organization, or running your own health clinic), and give you an extra analytic skill to brag about in your job interviews. 3. Understanding research will make you an educated consumer. You will be able to evaluate the information before you and determine what to accept and what to reject. Truth be told, understanding research will save you money in the short and long term\*. \*From Chapter 1 of Introduction to Research Methods: A Hands-On Approach

*Introduction to Phenomenological Research, volume 17 of Martin Heidegger’s Gesamtausgabe, contains his first lectures given at Marburg in the winter semester of 1923–1924. In these lectures, Heidegger introduces the notion of phenomenology by tracing it back to Aristotle’s treatments of phainomenon and logos. This extensive commentary on Aristotle is an important addition to Heidegger’s ongoing interpretations which accompany his thinking during the period leading up to Being and Time. Additionally, these lectures develop critical differences between Heidegger’s phenomenology and that of Descartes and Husserl and elaborate questions of facticity, everydayness, and flight from existence that are central in his later work. Here, Heidegger dismantles the history of ontology and charts a new course for phenomenology by defining and distinguishing his own methods.*

*Narrative of the Life of Frederick Douglass First published in 1845, Narrative of the Life of Frederick Douglass is an eye-opening depiction of American slavery. Part autobiography, part human-rights treatise, it describes the everyday horrors inflicted on captive laborers, as well as the strength and courage needed to survive. Narrative of the Life of Frederick Douglass Born into slavery on a Maryland plantation in 1818, Frederick Douglass spent years secretly teaching himself to read and write—a crime for which he risked life and limb. But he eventually lead him to New York City and freedom. Narrative of the Life of Frederick Douglass Few books have done more to change America’s notion of African Americans than this seminal work. Beyond its historical and social relevancy, it is admired today for its gripping stories, the intensity of spirit, and heartfelt humanity. Narrative of the Life of Frederick Douglass This ebook has been professionally proofread to ensure accuracy and readability on all devices. Narrative of the Life of Frederick Douglass Born into a life of bondage, Frederick Douglass secretly taught himself to read and write. It was a crime punishable by death, but it resulted in one of the most eloquent indictments of slavery ever recorded. His gripping narrative takes us into the fields, cabins, and manors of pre–Civil War plantations in the South and reveals the daily terrors he suffered. Narrative of the Life of Frederick Douglass Written more than a century and a half ago by a Black man who went on to become a famous orator, U.S. minister to Haiti, and leader of his people, this timeless classic still speaks directly to our age. It is a record of savagery and inhumanity that goes far to explain why America still suffers from the great injustices of the past. Narrative of the Life of Frederick Douglass*

*With an increasing expectation that all health professionals, including midwives, will base their practice on evidence, this popular book demystifies the world of research for midwives in the UK. Introduction to Research for Midwives is a highly regarded resource that helps the reader develop their research skills and guides them toward using evidence effectively in their clinical work. Written clearly and simply, it covers research methods and processes, critical evaluation of research, and application of research to practice. This book is suitable for both students and practising midwives, whether they are producers or end-users of research, or simply need to understand how to critique research articles and produce literature reviews. Simple language, clear writing and structure – can be dipped into or read from cover to cover Extensive guidelines on critiquing research articles and producing successful literature reviews Student friendly – includes tips for producing successful assignments New chapter on ‘How to Write an Undergraduate Dissertation’ ‘Conducting Research’ and ‘Critiquing Research’ sections in each chapter – suitable for midwives using research in different ways Reflection prompts to encourage readers to engage with the narrative Reader activities to enhance learning and understanding Comprehensive and fully updated throughout Glossary to provide clear explanations of research jargon Linked to the NMC Standards and Proficiencies for Midwives, and can support professional revalidation*

*This volume is a call for integrity in autoethnographic research. Stephen Andrew weaves together philosophy, critical theory, and extended self-reflections to demonstrate how and why qualitative researchers should assess the ethical quality of their work. He also offers practical tools designed to limit the likelihood of self-indulgence and solipsism in first-person writing. Equally instructive and exemplary, his work: Is written in a relatable style that draws readers in and encourages them to think critically about the implications and effects of their writing. Examines the history of qualitative and autoethnographic research. Provides implementable strategies for textualizing lived experiences and relationships with others.*

Lecturers, why waste time waiting for the post to arrive? Request and receive your e-inspection copy today! Writing good essays can be a real challenge. If you need a helping hand (or simply want to improve your technique) this book sets out proven approaches and techniques which can help everyone write good essays. Extensively revised and updated, this 4th edition includes new material such as: A chapter on essay planning, focusing on literature searching (using online materials), note-taking and formulating an argument A comparison of essay writing to exam writing The use of academic language, vocabulary and register, and its ‘accuracy and appropriateness’ A new Companion Website providing additional activities, downloads and resources. The authors focus on answering key questions you will face when preparing essays - What do tutors look for when marking my essay? What kind of skills do I need as I progress through my course? How can I avoid inadvertent plagiarism? What are the protocols for referencing? Encapsulated in easy to digest summaries, this edition shows you how to approach different types of essay questions, addresses common worries, and provides extensive use of worked examples including complete essays which are fully analysed and discussed. Visit the Companion Website at [www.uk.sagepub.com/redman/](http://www.uk.sagepub.com/redman/) for a range of free support materials! Good Essay Writing is highly recommended for anyone studying social sciences who wants to brush up on their essay writing skills and achieve excellent grades. SAGE Study Skills are essential study guides for students of all levels. From how to write great essays and succeeding at university, to writing your undergraduate dissertation and doing postgraduate research, SAGE Study Skills help you get the best from your time at university. Visit the SAGE Study Skills website for tips, quizzes and videos on study success!

Health-centred research has changed hugely over the last ten years, from the importance of computing software to the NHS becoming more involved in research. The expectations of grant-awarding bodies, ethics committees and publishers have evolved and increased in many senses. This new edition is designed for trainee clinicians, not only those preparing for membership of the Royal College of Obstetricians and Gynaecologists (MRCOG) but also higher degree candidates and aspiring clinical academics. Chapter authors with extensive expertise make the path to embarking on research direct, straightforward and most importantly, fun and interesting, particularly aiming to support those who trained clinically and are now undertaking a research project or beginning an academic career. There remains no single book with so much relevant information gathered in a single, succinct volume. This edition now covers the wide spectrum of modern research methods for all specialities, with five supplementary chapters on major obstetric and gynaecological subspecialties.

Whilst the ‘health sciences’ are a broad and diverse area, and includes public health, primary care, health psychology, psychiatry and epidemiology, the research methods and data analysis skills required to analyse them are very similar. Moreover, the ability to appraise and conduct research is emphasised within the health sciences - and students are expected increasingly to do both. Introduction to Research Methods and Data Analysis in the Health Sciences presents a balanced blend of quantitative research methods, and the most widely used techniques for collecting and analysing data in the health sciences. Highly practical in nature, the book guides you, step-by-step, through the research process, and covers both the consumption and the production of research and data analysis. Divided into the three strands that run throughout quantitative health science research - critical numbers, critical appraisal of existing research, and conducting new research - this accessible textbook introduces: Descriptive statistics Measures of association for categorical and continuous outcomes Confounding, effect modification, mediation and causal inference Critical appraisal Searching the literature Randomised controlled trials Cohort studies Case-control studies Research ethics and data management Dissemination and publication Linear regression for continuous outcomes Logistic regression for categorical outcomes. A dedicated companion website offers additional teaching and learning resources for students and lecturers, including screenshots, R programming code, and extensive self-assessment material linked to the book’s exercises and activities. Clear and accessible with a comprehensive coverage to equip the reader with an understanding of the research process and the practical skills they need to collect and analyse data, it is essential reading for all undergraduate and postgraduate students in the health and medical sciences.

Now in its 7th edition this textbook is a must have for any health professional student. It provides a comprehensive overview of health research, in a concise and easy to read format using examples directly related to the health sciences. It helps students understand health research models, and how research goes on to inform and improve evidence-based clinical practice. For practitioners it provides guidance on published research in journals, providing an essential tool to keep their practice evidence based. Uses simple language and demystifies research jargon Covers both quantitative and qualitative research methodology, taking a very practical approach Provides an extensive glossary for better understanding of the language of research Fully updated online interactive self-assessment tests including MCQs, true or false questions and short answer questions.

How to Write Social Sciences Research Paper: For Students and Professionals

A Hands-On Approach

Understanding and Evaluating Research: A Critical Guide aims to sensitize students to the necessity of learning how not to defer to the mysterious authority of the experts, but rather to learn how to be a critical consumer of others’ research, and to gain confidence in their ability to be producers of research. Sue McGregor shows students how to be research literate, and how to find, critique and apply other people’s scholarship. This textbook is grounded in a solid understanding of the prevailing research methodologies for creating new knowledge (philosophical underpinnings), which in turn dictate problem posing, theory selection, and research methods (tasks for sampling, collecting and analyzing data, and reporting results).

George Orwell set out ‘to make political writing into an art’, and to a wide extent this aim shaped the future of English literature - his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While 1984 and Animal Farm are amongst the most popular classic novels in the English language, this new series of Orwell’s essays seeks to bring a wider selection of his writing on politics and literature to a new readership. In Politics and the English Language, the second in the Orwell’s Essays series, Orwell takes aim at the language used in politics, which, he says, ‘is designed to make lies sound truthful and murder respectable, and to give an appearance of solidity to pure wind’. In an age where the language used in politics is constantly under the microscope, Orwell’s Politics and the English Language is just as relevant today, and gives the reader a vital understanding of the tactics at play. ‘A writer who can - and must - be rediscovered with every age.’ – Irish Times

This book is an indispensable guide to how to write articles, choose journals, and deal with revisions or rejection. Each chapter is written by a highly experienced journal editor - people who have actually made decisions on manuscripts and publication, as well as being eminent in their respective scientific field and written many articles themselves. It showcases parts of articles, discusses journal submission, outlines the resubmission process, and highlights systemic issues. Clear instructions are given on writing an empirical article, literature reviews, titles and abstracts, introductions, theories, hypotheses, methods and data analysis. Each part of the process is laid out from presenting results, to mapping-out a discussion and writing for referees. The integral skills of revising papers and ensuring a high impact are taught in ‘article writing 101’. Whilst less intuitive knowledge is provided concerning publishing strategies, references, online submission, review systems, open access and ethical considerations.
