Google apps
were first
launched in
2006, and then
it was

rebranded as G Suite in 2016, but year in year out, Google changed their features, and of course, when using any Google applications, you will always be notified when there are

any changes.

All the apps in this book are essential and important. Over the years, Google has been able to cover the lapses in technology by introducing applications that will solve

Get Free Google Apps For Dummies

our problems
and at the same
time, make
things easier
for us to do.

We have
different types
of Google
applications,
and they are
all
interrelated.

That is, they

work hand in hand with each other. Examples include Google Drive, which gives you the platform to save all of your documents on the cloud without the fear of losing all documents

when you lose
your phone.

Once you have a
Google account,
you

automatically
have 15GB of
free space, so
you can save
anything you
want to save.

We also have
Google docs. On

this app, you can type anything you want on it; it has most of the normal Microsoft words features, so it makes it easy for you type, especially for those who will like to use

their phone to type, but the difference between this and Microsoft is, whatever changes you make on the documents, it automatically saves it. It is not like Microsoft word

that you still need to save. There is also Google Slides and sheets. It makes it possible for you to create a presentation and also create new spreadsheet documents. Let's not
