Among the latest in electronic innovation the Samsung Galaxy Tab is designed and distributed by infamous Samsung. Since its inception in 1995, the Samsung Company has gotten stride in its offering of the most modern and intuitive pieces and the new Galaxy Tab A is no different. The new Tab A boasts a 9.7 inch screen and a durable titanium coating; designed to guarantee durability. The new tablet also offers a Kids Mode; a feature that provides secure fun and learning for children. Among the latest pieces of technology incorporated into the design of the Tab A is the Multi-Window feature/ It allows users to open and view two applications simultaneously; ideal for multi-tasking or maximizing the relax time. The design also includes the Perfect Office Partner from Microsoft; which includes the full Microsoft office for keeping track of business notes, events and daily obligations for either home or the office.

Google launched Google Hangouts in May 2013. This platform replaces Google Talk, Gchat, and Google Messenger as well as the Google Plus Video Chat feature. The free chat service allows people to chat one-on-one or in groups. You can have up to 10 people in a video call (or with a corporate account, up to 15) and up to 100 people in a text chat hangout. Google Hangouts is super simple to use. From friendly chatting and long-distance movie nights to work meetings and video conferencing, it allows for an easy way to collaborate and share. This book will show you 12 powerful social

marketing techniques you can immediately apply to your business online. You will gain an insider's look at how this simple free tool can grow your audience to levels you've only dreamed of.

Informed by a large-scale survey of librarians across the spectrum of institution types, this guide will be a true technology companion to novices and seasoned LIS professionals alike.

Carol Smallwood's *The Complete Guide to Using Google in Libraries, Volume 1: Instruction, Administration, and Staff Productivity* explores how Google's suite of tools, from Google Docs (now Google Drive), Google Scholar, Hangout, Forms, and others made freely available to the Internet Community can be used by libraries to expand the role of digital operations in the

management of library materials, to communicate with their patrons and collaborators, to exploit the resources on the Web, and many others. The book has 29 chapters organized into sections that focus on ways that Google's suite of tools can be applied to address problems in a specific area of library concern. The section headings are: Library Instruction for Users; Collaboration within and among libraries; Library Administration; Collection Management; and Library Productivity. In each topical area, the chapters show how librarians are taking advantage of these tools to change the way that their library works. All of this without the burden of an additional bill to pay. Through these carefully selected case studies from real libraries, you will be able to learn about the surprising and powerful potential that exists through Google tools to improve library operations.

Since the internet speeds went above the 500kbps mark, the number of things people can do with their interconnected devices skyrocketed.

Automated homes, connected cars, and internet enabled TVs. The latter

is what threatens to revolutionize the entertainment world as we know it, do away with cable TV and abolish the need for expensive blue-ray players. Even though smart TVs are so lucrative, most people find them either too costly, or limiting. The alternative would be going for a TV with an HDMI port, a USB port and purchasing a dongle to bring in the power of internet TV. Chromecast is one of the best and cheapest such tools in the market.

Free Technology for Libraries will help you discover how you can implement top-notch technology solutions within your organization to create intranets and knowledge bases, conduct webinars and conference calls, manage electronic resources, track library statistics, market your library, and much more, all at no cost!

This practical and holistic approach to offering library resources and services to online patrons addresses multiple areas of service to online patrons, including reference,

instruction, access, and marketing. Academic libraries are wonderful resources for university students and faculty on campus, and public libraries thrive on providing targeted in-person services such as storytime, makerspaces, and adult programming. It can be easy, however, to forget about the large population of students, faculty, and community members who access library resources and use library services remotely. Library Services for Online Patrons reaches out to patrons who are not—or not always—located on campus or who seldom—if ever—visit libraries' physical facilities and who may not be aware of or able to equitably use library services. The authors focus on ways to organize library resources using principles of design and to cater library services to the specific needs of online students, faculty, and community members. They also address how to effectively target marketing to the online population and how to collaborate with campus and community stakeholders who work directly with them. Provides novel services and resources that will save librarians already serving online patrons time and energy Offers a broad, practical perspective to help novice librarians make initial connections with online learners Emphasizes the importance of identifying other institutional players in online education in order to effectively implement and market improvements Enhances understanding of the importance of universal design and how to assess possibilities for improvement in online services

Successful sport psychology professionals have benefitted from stimulating conversations, challenging questions, support, camaraderie, guidance, and advice offered by their graduate school classmates. Peer relationships are vital and valued aspects of professional development, with many of the relationships formed during school, serving as the closest confidences and strongest friendships throughout careers and lifetimes. Yet, the voices and experiences of fellow graduate students are sparsely reported in the sport psychology literature, and profoundly silent in textbooks. The Peer Guide to Applied Sport Psychology for Consultants in Training provides a platform for the influential voices of peers, with whom graduate students relate and connect on a visceral level. Mimicking the environment of a thriving classroom, each chapter within the Peer Guide is primarily authored by graduate students, or in some cases

recent graduates, with an academic mentor serving a secondary role. The chapter topics were selected by the editors—all of whom are experienced graduate instructors and have taught and mentored many young professionals—as areas where graduate students are commonly challenged, and correspondingly, where peer support and guidance are most valued. These topics include developing a theoretical orientation to performance excellence, utilizing science to guide practice, ethics, getting the most from supervision, initial experiences in consultation, working with both individuals and groups, and multicultural considerations. The chapters are written in a personal, relatable tone and provide science and practice, challenge and comfort, humor and vulnerability, and insights and anecdotes that are particularly meaningful and accessible coming from peers. A unique addition to the sport psychology literature, this volume is a key resource for developing and established consultants alike.

*From the Forward by Michael Lesk: Google has now developed services far beyond text search. Google software will translate languages and support collaborative writing. The chapters in this book look at many Google services, from music to finance, and describe how they can be used by students and other library users. Going beyond information resources, there are now successful collaboration services available from Google and others. You can make conference calls with video and shared screens using Google Hangouts, Writing documents with small numbers of colleagues often involved delays while each author in sequence took over the writing and made edits. Today Google Docs enables multiple people to edit the same document at once. An ingenious use of color lets each participant watch in real time as the other participants edit, and keeps track of who is doing what. If the goal is to create a website rather than to write a report, Google Sites is now one of the most popular platforms.
