Every few generations, there is a 'killer app' (i.e. the spreadsheet, email, etc.). These are apps that change the industry in such a way that changes the way people work. The current killer app is Bitcoin, because it is essentially allowing software to generate data. Bitcoin also started the cryptocurrencies and Blockchain movement that is revolutionizing the financial industry. Each of these two technologies has started whole new movements that are creating new companies, wealth, and products. Behind Google's deceptively simple interface is immense power for both market and competitive research—if you know how to use it well. Sure, basic searches are easy, but complex searches require specialized skills. This concise book takes you through the Google's powerful search-refinement features, so you can quickly find the specific information you need. Learn techniques ranging from simple Boolean logic to URL parameters and other advanced tools, and see how they're applied to real-world market research. Incorporate advanced search operators such as filetype:, intitle:, daterange:, and others into your queries Use Google filtering tools, including Search Within Results, Similar Pages, and SafeSearch, among others Explore the breadth of Google through auxiliary like Google News, Google Books, Google Blog Search, and Google Scholar Acquire advanced Google skills that result in more effective search engine optimization (SEO)

A Complete Guide to Google Programmable Search Engines

A Beginner's Guide to Online Genealogy

Keyword Research Guide

Early Childhood Development: Concepts, Methodologies, Tools, and Applications

Google's Programmable Search Engines (PSEs, previously called Custom Search Engines) provide search opportunities that are unavailable with any other tool. PSEs have advanced settings and search operators that are not supported by "regular" Google. With PSEs, it is possible to perform filtered searches within parts of the web as if they were databases! While lots of professionals use existing PSEs to source for talent or with other research goals, few people have experience creating them. Even fewer know about powerful PSE-only search operators. The main reason PSEs are not as popular as they should be is that it is not easy to get educated on PSE creation. There is little information online and no books (other than this one) on the subject. Even less info is available on the "structured" operators that allow for filtered searches. The first of its kind, this book hopes to popularize these fun and powerful tools so that many more people can include PSEs in their work. Key Features: A detailed introduction to creating PSEs, including info absent in Google's help A "hack" for creating PSEs that look for profiles in seconds An introduction to advanced PSE-only search operators allowed to perform filtered searches of parts of the web A "hack" for expanding Google's search limits to 500 terms Use cases, examples, and approaches that would be educational for those doing online research This book will be of interest to researchers, OSINT specialists, investigative journalists, Competitive Intelligence people, recruiters, and Sourcers, to name a few categories, and to the general public interested in how to search better.

This book will be vital reading for anyone doing research, since using the web to find high quality information is a key research skill. It introduces beginners and experts alike to the most effective techniques for searching the web, assessing and organising information and using it in a range of scenarios from undergraduate essays and projects to PhD research. Nigel Ford shows how using the web poses opportunities and challenges that impact on student research at every level, and he explains the skills needed to navigate the web and use it effectively to produce high quality work. Ford connects online skills to the research process. He helps readers to understand research questions and how to answer them by constructing arguments and presenting evidence in ways that will enhance their impact and credibility. The book includes clear and helpful coverage of beginner and advanced search tools and techniques, as well as the processes of: @!critically evaluating online information @!creating and presenting evidence-based arguments @!organizing, storing and sharing information @!referencing, copyright and plagiarism. As well as providing all the basic techniques students need to find high quality information on the web, this book will help readers use this information effectively in their own research. Nigel Ford is Professor in the University of Sheffield's Information School.

Dissecting the Hack: The F0rb1dd3n Network, Revised Edition, deals with hackers and hacking. The book is divided into two parts. The first part, entitled “The F0rb1dd3n Network, tells the fictional story of Bob and Leon, two kids caught up in an adventure where they learn the real-world consequence of digital actions. The second part, “Security Threats Are Real (STAR), focuses on these real-world lessons. The F0rb1dd3n Network can be read as a stand-alone story or as an illustration of the issues described in STAR. Throughout The F0rb1dd3n Network are “Easter eggs —references, hints, phrases, and more that will lead readers to insights into hacker culture. Drawing on The F0rb1dd3n Network, STAR explains the various aspects of reconnaissance; the scanning phase of an attack; the attacker's search for network weaknesses and vulnerabilities to exploit; the various angles of attack used by the characters in the story; basic methods of erasing information and obscuring an attacker's presence on a computer system; and the underlying hacking culture. Revised edition includes a completely NEW STAR Section (Part 2) Utilizes actual hacking and security tools in its story- helps to familiarize a newbie with the many devices and their code Introduces basic hacking techniques in real life context for ease of learning

New Perspectives on the Internet: Comprehensive

Natural resources have the transformational potential to support economic and political stability as well as contribute to national prosperity and economic development. However, in countries dependent upon natural resource sectors, poor management of these sectors often contributes to corruption, illicit financial flows (IFFs) and thus, poverty. Adequate transparency and accountability in regulatory management of these sectors is a challenge for resource rich countries. Poor licensing decisions in natural resource management can open a Pandora's box of corruption risks. This manual provides methods and options based on good practices to improve transparency, accountability, and integrity in the regulatory licensing process and integrity due diligence. The manual borrows models from the Basel Core Principle 'fit and proper' concept, and provides options for conducting effective (a) beneficial ownership; (b) criminal/legal; and (c) conflicts of interest checks, with a goal of integrating these into the regulatory licensing process. The manual also identifies common legal framework defects that can facilitate corruption risks, and offers options based on principles of regulatory integrity to reduce these risks. The good practices identified can help countries allocate limited financial resources in conducting thorough background checks in a cost-effective manner, as well as meet EITI's requirements for public disclosure of beneficial owners and politically exposed persons. These strategies for reducing opportunities for corruption in extractive sectors can help reduce IFFs that can sap resources from the economy and inhibit a country's ability to achieve the Sustainable Development Goals.

Teaching Google Scholar in your library instructional sessions can increase students' information and digital literacy skills. Students' familiarity with Google Scholar's interface works to the instructor's advantage and allows more time to address students' information needs and teach foundational information literacy skills and less time teaching a new database with a less-intuitive database interface. Teaching Google Scholar: A Practical Guide for Librarians will illustrate instructional methods and incorporate step-by-step guides and examples for teaching Google Scholar. It begins with providing you with essential background: What Google Scholar is How to set up Google Scholar using OpenURL How to design Google Scholar instructional sessions How to incorporate active learning activities using Google Scholar After reading it, you will be ready to teach students' critical skills including how to: Use specific Google Scholar search operators Incorporate search logic Extract citation data, generate citations, and save citations to Google's My Library and/or a citation management program Use Google Scholar tools- including "cited by," "alerts," "library links," and "library search" Google Scholar is a powerful research tool and will only become more popular in the coming years. Learning how to properly teach students how to utilize this search engine in their research will greatly benefit them in their college career and help promote life-long learning. Google Scholar instruction is a must in today's modern information literacy classroom.

In How to Find Out Anything, master researcher Don MacLeod explains how to find what you're looking for quickly, efficiently, and accurately—and how to avoid the most common mistakes of the Google Age. Not your average research book, How to Find Out Anything shows you anyone. From top CEO's salaries to police records, you'll learn little-known tricks for discovering the exact information you're looking for. You'll learn: •How to really tap the power of Google, and why Google is the best place to start a search, but never the best place to finish it. •How to find experts and online resources that search engines cannot scour, such as refdesk.com, ipl.org, the University of Michigan Documents Center, and Project Gutenberg, among many others. •How to access free government resources (and put your tax dollars to good use). •How to find experts and •How to dig up seemingly confidential information on people and businesses, from public and private companies to non-profits and international companies. Whether researching for a term paper or digging up dirt on an ex, the advice in this book arms you with the sleuthing skills This volume unpacks the multidimensional realities of political violence, and how these crimes are dealt with throughout the US judicial system, using a mixed methods approach. The work seeks to challenge the often-noted problems with mainstream terrorism research, namely scarcity of data-driven analyses, and a tendency for authors not to work collaboratively. This volume inverts these challenges, situating itself within primary-source materials, empirically studied through collaborative, inter-generational (statistical) analysis. Through a focused exploration influenced by gender, ethnicity, ideology, tactical choice, geography, and citizenship, the chapters offered here represent scholarship from a pool of more than sixty authors. Utilizing a variety of quantitative and qualitative methods, including regression and other forms of statistical Comparative Analysis, Corpus Linguistics, and Discourse Analysis, the researchers in this book explore not only the subject of political violence and the law but also the craft of research. In bringing together these emerging voices, this volume seeks to challenge expertism, while of much interest to students of terrorism and political violence, criminology, and US politics.

Let The Rough Guide to The Internet open up the Internet world to you.

From the Forward by Michael Lesk: Google has now developed services far beyond text search. Google software will translate languages and support collaborative writing. The chapters in this book look at many Google services, from music to finance, and describe how they can be used by students and other library users. Going beyond information resources, there are now successful collaboration services available from Google and others. You can make conference calls with video and shared screens using Google Hangouts, Writing documents with small numbers of colleagues often involved delays while each author in sequence took over the writing and made edits. Today Google Docs enables multiple people to edit the same document at once. An ingenious use of color lets each participant watch in real time as the other participants edit, and keeps track of who is doing what. If the goal is to create a website rather than to write a report, Google Sites is now one of the most popular platforms. Google is also involved in social networking, with services such as Google+ Other tools view social developments over time and space. The Google Trends service, for example, will show you when and where people are searching for topics. Not surprisingly, searches for “swimwear” peak in June and searches for “snowmobile” peak in January. The Complete Guide to Using Google in Libraries, Volume 2: Research, User Applications, and Networking has 30 chapters divided into four parts: Research, User Applications, Networking, Searching. The contributors are practitioners who use the services they write about and they provide how-to advice that will help public, school, academic, and special librarians; library consultants, LIS faculty and students, and technology professionals.

Written for lay people searching for information on the Web, this resource describes all Google Web Search features and tools in detail. All critical steps are illustrated with detailed screenshots.
