Robbins/Judge provide the research you want in the language your students understand; accompanied with the best selling self-assessment software, SAL. Some topics include management functions; the social sciences; helping employees balance work and other responsibilities; improving people skills; improving customer service; motivational concepts; communication; power and politics; conflict and negotiation; culture; and stress management. Globally accepted and written by one of the most foremost authors in the field, this is a necessary read for all managers, human resource workers, and anyone needing to understand and improve their people skills.

This book is a study of the origins of migratory labour and racial discrimination in South Africa's premier industry, the gold mines of the Witwatersrand. Based upon government records and private business archives, it examines the highly competitive world of mine labour recruiting at the turn of the century and concludes that this regimented labour system was the product not only of the mining companies but also of political pressures and economic needs in South African society. The system was remarkable for the hardship it imposed, for the size of the labour force recruited - more than 200,000 low-wage black labourers were delivered annually to the industry's grim, barrack-like compounds - and for the fact that most of the workers were African pastoralists without previous industrial experience. Forced to work in appalling conditions amid much squalor

Annual Report

The Making of the Colonial Order in the Eastern Cape, 1770-1865

***This book brings together authors from United States, South Africa, United Kingdom, China, Canada and Australia to provide insights and case studies from across a range of contexts to explore the interplay between the notions of rurality, innovation and education. The book reveals a hopeful and resilient approach to innovative rural education and scholarship collectively and provides important evidence to speak against an often deficit view of rural education. Three patterns are revealed, namely: the importance of place-attentive strategies, the importance of joined up alliances***

*to maximise resources and networks and finally, the need to utilize alternative methodologies and frameworks that have a starting point of difference rather than deficit for any rural initiative or approach. By drawing from international examples and responding in innovative ways to rural education challenges, this book provides an opportunity to share international insights into innovations, interventions and partnerships that promote and support rural education in its broadest sense.*

*In Sub-Saharan Africa, the rapidly evolving COVID-19, increasing population growth, and exponential expansion in demand for agricultural commodities are putting pressure on available resources, thereby posing immense challenges to the region's capacity to achieve nutritional security related to United Nations Sustainable Development Goals (SDGs). Although Sub-Saharan Africa boasts vast, fertile and uncultivated arable lands, its capacity to contribute to feeding its current and future population is being seriously undermined by factors such as poor adoption and utilization*

*of innovations and digital tools, climate change impact, environmental degradation, weak political will, limited interest in farming, lack of government support, and more. In spite of these constraints, sustainable agriculture, food security and nutrition security in Sub-Saharan Africa can be achieved by adopting a multi-pronged approach, which includes improved agricultural mechanization, adoption of high yielding crop varieties, use of information technology, public investments in improved technologies, and rural infrastructure funding. This edited volume provides innovative policy tools for enhancing Sub-Saharan Africa's capacity to achieve sustainable agriculture, food security and nutrition security in the digital age and in the face of climate variability. Furthermore, this book presents smart strategies for increased agricultural production, reduced food waste, and enhanced nutritional outcomes by harnessing the latest discoveries in agricultural research, education and advisory services.*

This edited collection examines contemporary directions in geographical research on South Africa. It encompasses a cross section of selected themes of critical importance not only to the discipline of Geography in South Africa, but also of relevance to other areas of the Global South. All chapters are original contributions, providing a state of the art research baseline on key themes in physical, human and environmental geography, and in understanding the changing geographical landscapes of modern South Africa. These contributions set the scene for an understanding of the relationships between modern South Africa and the wider contemporary world, including issues of sustainable development and growth in the Global South.

Yours for the Union stands as a landmark history of the making of the black working class in South Africa. Drawing on a wide range of sources, it covers the crucial period of 1930–47, when South Africa's rapid industrialisation led to the dramatic growth of the working class, and uncontrolled urbanisation resulted in vast shanty towns which became a focal point for resistance and protest. Importantly, Hirson was one of the first historians to go beyond the traditional focus on the mines and factory workplaces, broadening his account to include the lesser known community struggles of the urban ghettos and rural reserves. Written by an author with first-hand involvement in South African labour struggles, Yours for the Union broke new ground with its account of the effort to mobilise urban squatters, domestic workers and rural peasants, and remains an indispensable resource for the study of the South African labour movement.

This volume is the first general social and economic history of the Western Cape of South Africa. Until recently, this region had been largely neglected by historians because it does not occupy a central place in the national political economy. Wilmot G. James and Mary Simons argue that a great deal about modern South Africa has been

shaped by the distinctive society and economy of the Western Cape. Its history also reveals striking parallels and contrasts with other regions of the African continent. The Western Cape is the only region of South Africa to have experienced slavery. In this sense, the Western Cape has historical traditions more akin to colonial slave societies of the Americas than to those of the rest of Africa. Moreover, in contrast to the rest of South Africa, a proletariat emerged in the Western Cape early in its history, at the start of the eighteenth century. There developed a much more stable and enduring system of class and labor relations. In the twentieth century, these became closely enmeshed with race and status. Racial paternalism and the close correlation between class, caste, and color have their historical roots in the Western Cape. The book is arranged thematically and explores the social and economic consequences of slavery and emancipation in the eighteenth and nineteenth centuries. Issues of economy and labor, such as economic underdevelopment in the Western Cape, the labor market, and trade-union organization in the twentieth century are examined. The authors also treat the role of the state in shaping Western Cape society. Class, Caste, and Color is not only a

groundbreaking work in the study of South Africa, but provides an agenda for future researchers. It will be essential reading for historians, economists, and Africa area specialists. Wilmot G. James is the executive director of the Africa Genome Education Institute. He has taught at The University of Cape Town, Yale University, and Indiana University. Mary Simons is a senior lecturer in the department of political studies at the University of Cape Town. Her research interests include social relations in Cape Town, gender politics, and third world comparative politics.

Why South African Schoolchildren Underachieve in Reading and Mathematics

A Study by the Dept. of Economics, University of Natal

Dictionary of African Biography

National Agricultural Library Catalog

In the past decade, the national preoccupation has been on the crisis in secondary schools. Lurking behind the intractable problem of low pass rates, the dysfunctional

schools and the small number of higher grade mathematics and science graduates is the calamity in primary education. Drawing on the work of researchers in a range of fields including psychology, sociology, anthropology, linguistics, economics, the health sciences, and mathematics education, this book documents the depth and scope of the primary education crisis and provides a comprehensive and rigorous explanation of its causes. Primary education in crisis pulls together the wealth of research on health, poverty, resources, language and teaching as factors in academic achievement in reading, writing and mathematics. At the centre of the book is an analysis of the published studies that systematically document what teachers teach and fail to teach, and why it is that teaching is at the heart of the crisis in primary education. The author suggests that there are no quick fixes, but only hard choices and that, for reform to succeed, it must be evidence-based. Property rights and efforts to curb state appropriation of private properties for public purposes have always held high

status on the political agenda of the US and many other nations that feature a corporate capitalist economic system. In addition to this, over the last several decades conservative libertarian and neo-liberal groups have put constitutional demands for greater property protection on the agendas of courts in several countries. Studying property rights mobilization in both domestic and comparative contexts, the contributors to this volume bring a range of social science perspectives to address three primary issues: the contours and characteristics of property rights mobilizations; the degree to which property rights movements have influenced development of law in demonstrable ways; and the broader cultural, social and economic implications of modern-era property rights litigation and legal mobilizations. This will be a key text for anyone working within or interested in property rights.

White Supremacy and Black Resistance in Pre-industrial South Africa

Farming in South Africa

*The World Bank insists that the urban share of sub-Saharan Africa's population is rapidly increasing - this study shows that in many countries this is no longer true as migration strategies have adapted in response to economic and political change.*

*Countries everywhere are divided within into two distinct spatial realms: one urban, one rural. Classic models of development predict faster growth in the urban sector, causing rapid migration from rural areas to cities, lifting average incomes in both places. The situation in South Africa throws up an unconventional challenge. The country has symptoms of a spatial realm that is not rural, not fully urban, lying somewhat in limbo. This is the realm of the country's townships and informal settlements (T&IS). In many ways, the townships and especially the informal settlements are similar to developing world slums, although never was a slum formed with as much central planning and purpose as were some of the larger South*

*African townships. And yet, there is something distinct about the T&IS. For one thing, unlike most urban slums, most T&IS are geographically distant from urban economic centers. Exacerbated by the near absence of an affordable public transport system, this makes job seeking and other forms of economic integration prohibitively expensive. Motivated by their uniqueness and their special place in South African economic and social life, this study seeks to develop a systematic understanding of the structure of the township economy. What emerges is a rich information base on the migration patterns to T&IS, changes in their demographic profiles, their labor market characteristics, and their access to public and financial services. The study then look closely at Diepsloot, a large township in the Johannesburg Metropolitan Area, to bring out more vividly the economic realities and choices of township residents. Given the current dichotomous urban structure, modernizing the township economy and enabling its convergence with the much richer urban centers has the potential to unleash significant productivity gains. Breaking out of the current low-level equilibrium however will require a comprehensive and holistic policy agenda, with significant complementarities among the major policy reforms. While the study tells a rich and coherent story about development patterns in South African townships and points to some broad policy directions, its research and analysis will generally need to be deepened before being translated into direct policy action. This title - the fourth in a series - sets out government's obligations to budget for the realisation of child socio-economic rights. It develops and applies a methodology to examine whether government has been budgeting for the delivery of the child's right to social security and to*

Wrecking Ball explores, in an unprecedented manner, a decalogue of wicked problems that confronts humanity: Nuclear proliferation, climate change, pandemics, permanent technological unemployment, Orwellian public and private surveillance, social media that distorts reality, cyberwarfare, the fragmentation of democracies, the inability of nations to contain private power, the failure of multinational institutions to promote collaboration and the deepening of autocratic rule in countries that have never known anything but extractive institutions. Collectively, or even severally, these wicked problems constitute crises that could end civilisation. Does this list frighten you, or do you blithely assume that tomorrow will be just like yesterday? Wrecking Ball shows that without an inclusive system of global governance, the collective action required to solve those wicked problems falls beyond the remit of the world's 20 inclusive democracies, 50 flawed democracies, 130 extractive, elitist autocracies. Flawed democracies and autocracies that already struggle to produce goods necessary for their own citizens to flourish, are simply incapable

of committing to international arrangements that address the existential threats posed by the decalogue of wicked problems. This then is our children's inheritance: Dystopias far, far worse than the polities that we ourselves have known. What, if anything, can mitigate the harms that are our legacy? Wrecking Ball offers, as an answer, a ground-breaking analysis of South Africa's political economy. It demonstrates that this country's elitist and extractive political and economic institutions not only make resolution of ongoing domestic crises unattainable, likewise, they make meaningful responses to wicked problems impossible. Smart people think they have all the answers. Without laboring under any such illusions, Martin Luther King Jr eloquently opined: 'The arc of the moral universe is long, but it bends towards justice.' But what will happen, King would acidly ask, if we continue to dawdle, and simply run out of time? Wrecking Ball similarly operates under no such 'smart' pretenses, and undeterred and unmatched ventures into terrains traversed by truly great political economists: Smith, Ricardo, Marx and Keynes. By knitting together what we all know to be the facts, with cutting edge theory in economics, sociology, history and political science, the book paints an unflinching portrait of where we are, and where we are headed. Are we ready to be honest with ourselves about the likely future of this overheated, overpopulated planet?

This report is an integration of the seven reports which emerged from the research, and pulls together the findings arising from it. What emerges is that the resignation, death and ageing of the present educator force is likely to have a significant effect on replacement

demand for educators over the next four years.

Recent years have seen a sustained research effort exploring the African development experience. The extant literature has offered a large set of explanations as to why the African development record has lagged behind that of other regions of the developing world. This new volume brings international contributors together to focus on the role growth and institutions. First, it provides brief evidence on the growth and institutional records, as well as on development outcomes, during the post-independence period. Second, it targets certain growth determinants, including industrial embeddedness, innovation, exchange rate regimes, and environmental quality. Third, it sheds light on the dynamics and distribution of growth, and on growth-enhancing sectors of the economy. Finally, it investigates several issues of institutional development, as well as institutions generating development outcomes. Though focused on these two key areas, the coverage strives to achieve a comprehensive analysis of how Africa's development may have been enhanced or undermined and to offer lessons for the future. This volume is essential reading for all scholars of development economics and development studies.

This book provides an in-depth analysis of the emergence of a racially divided society in pre-industrial Southern Africa.

This collection presents rare documents relating to the development of various forms of communication across Africa by the British, as part of their economic investment in Africa. Railways and waterways are examined.

"Raymond Mhlaba is one of the most committed comrades , Thembeke Mufamadi had the honour to know and work with in the many years of the liberation struggle. What marks him above all in her

memory is the absolute honesty and integrity of the man. It is right and fitting that such a hero and veteran of our struggle should leave posterity with a record in his own words of his life and experiences. This story is told with the same honesty, simplicity and lack of self-aggrandisement that have always characterised Raymond Mhlaba. This book is commended very strongly for the voice it gives to one of the great heroes of our struggle." "Raymond Mhlaba exemplifies the kind of leader that survived all the injustices of white supremacy. His character was defined by Chief Luthuli, president of the African National Congress as embodying the courage that rises with danger. It is fortunate that individuals such as Mhlaba led South Africa's transition to democracy. He is a product of all that is best in South Africa."
