Research for
Educational
Change presents
ways in which
educational
research can fulfil
its commitments to
educational
practice. Focussing

its discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial effects on learning and teaching, the question of how these effects are to

be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and

social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of data, collected in a South African mathematics classroom. In the

second part, each of these teams makes a specific proposal about what can be done and how so that its research-generated insights have a tangible, beneficial impact on what is happening in

mathematical
classrooms.

Combining two
discourses – that of
researchers
speaking to one
another, and that of
researchers
communicating
their insights to
those responsible
for educational
