In 15-Minute Focus: Behavioral Threat Assessment and Management for K-12 Schools, Dr. Melissa A. Louvar Reeves explains the interrelated factors that play a role in a person's decision to plan and carry out an act of violence. Every year, stories about violence in schools make headlines around the world. And every year, questions surface: How could this have been prevented? What were the warning signs? What changes do we need to make in our schools and communities to prevent this from happening yet again? This book will help answer those questions, as you learn about the factors that affect decision-making, and the role of Behavioral Threat Assessment and Management (BTAM) in managing students' troubling behaviors, mitigating risk for the school and community, and directing students onto more positive pathways. In this book, you'll discover: Why schools should establish BTAM teams and protocols? How to establish a BTAM team? Identifying and reporting concerns? Establishing protocols for evaluating threats? How teachers, administrators, counselors and the community can work together to mitigate troubling behavior and ensure student success? Ways to assist struggling students as they transition to adult life after high school Educators, administrators, and school counselors have been trained on how to respond to a student who is suicidal or despondent. This book helps translate those skills to assist someone who is thinking about harming others.

Sample Questions from OECD's PISA Assessments

Kenya Gazette

In view of better results expected from examination of medical datasets (images) with hybrid (integration of thresholding and segmentation) image processing methods, this work focuses on implementation of possible hybrid image examination techniques.

for medical images. It describes various image thresholding and segmentation methods which are essential for the development of such a hybrid processing tool. Further, this book presents the essential details, such as test image preparation, implementation of a chosen thresholding operation, evaluation of threshold image, and implementation of segmentation procedure and its evaluation supported by pertinent case studies. Aimed at researchers/graduate students in the medical image processing domain, image processing, and computer engineering, this book: Provides broad background on various image thresholding and segmentation techniques Discusses information on various assessment metrics and the confusion matrix Proposes integration of the thresholding technique with the bio-inspired algorithms Explores case studies including MRI, CT, dermoscopy, and ultrasound images Includes separate chapters on machine learning and deep learning for medical image processing
