Exceptionally Gifted Children is unique. The first edition of this book, published in 1993, introduced 15 remarkable children, some of the most gifted young people ever studied, and traced their path through school, exploring their academic achievements (and in some cases enforced underachievement), their emotional development, their social relationships and their family relationships and upbringing. This new edition reviews these early years but also follows the young people over the subsequent ten years into adulthood. No previous study has traced so closely and so sensitively the intellectual, social and emotional development of highly gifted young people. This 20 year study reveals the ongoing negative academic and social effects of prolonged underachievement and social isolation imposed on gifted children by inappropriate curriculum and class placement and shows clearly the long lasting benefits of thoughtfully planned individual educational programs. The young adults of this study speak out and show how what happened in school has influenced and still influences many aspects of their lives. Miraca Gross provides a clear, practical blueprint for teachers and parents who recognise the special learning needs of gifted children and seek to respond effectively.

The updated revised 2nd Edition of the book 24 CBSE Sample Papers - Physics, Chemistry and Mathematics Class 12 contains 24 Sample Papers - 8 each of Physics, Chemistry and Mathematics. Explanations to all the questions along with stepwise marking has been provided. The book has been updated with the latest 3 CBSE Sample Papers of PCM and Chapter-wise Concept Maps of all the 3 subjects. The 24 Sample Papers have been designed exactly as per the latest Blue Prints issued by CBSE. The books also provide a 24 page Revision Notes for PCM containing Important Formulas & Terms.

This book arises from the author's experience of the South African science curriculum development and teaching since 1994, exploring definitions of science and approaches to science education appropriate to a newly liberated developing country. Each of the 50 chapters is borne out of Cliff Malcolm's close relationships with communities in SA where he obtained deep insights into their attitudes to science teaching and learning, providing him with an empirical basis to challenge tertiary institutions to transform their curriculum offerings to embrace the culture and world views of African students.

Who has access to higher education today? At what financial and personal cost? Based on what conditions and criteria? How do students describe and interpret their experiences? And how can institutions facilitate and constrain successful participation and completion? These research studies extend current understandings of what it is to be a student in higher education by embracing the dynamic relationship between students as agents and institutions as living structures which impact on their lives. Focusing on the diverse experiences of today's non-traditional and traditional students, researchers explore how and why institutional rhetoric of inclusion, engagement, gender, and access may or may not be reflected in the reality of students' experiences. Student Affairs moves from theory to application by suggesting realistic strategies for addressing the challenges surrounding the interrelation of students and institutions. Each essay analyzes issues of access and participation in programs ranging from community college development studies to graduate studies. As a whole, this collection is a testament to how much institutional change has occurred in the social organization of postsecondary education, and how much more change is required to meet the challenge of equitable access and inclusion.
