*Published by the American Geophysical Union as part of the Computational Seismology and Geodynamics Series, Volume 8. The American Geophysical Union (AGU) and the Editorial Board of Computational Seismology and Geodynamics (CSG) are happy to present the eighth volume of CSG. This volume contains 19 selected, translated, and reviewed articles of volumes 33 and 34 of Vychislitel'naya Seysmologiya (VS), which deal with seismicity and seismic hazard, forward and inverse problems in seismology, geodynamics, geomagnetism, and self-organized criticality. The Russian annual journal Vychislitel'naya Seysmologiya was established in 1966 by Volodya Keilis-Borok, one of most eminent geophysicists of our time, as a media for publication of the best results in the theoretical, computational and mathematical seismology. For a short period of time the journal had become a prominent and known among mathematical geophysicists around the world. In 1970s the journal began to publish also articles related to non-linear dynamics and earthquake prediction and later to computational geodynamics. Many distinguished seismologists, geophysicists, and mathematicians, like G. Barenblatt, A. Dziewonski, I. Gelfand, H. Huppert, H. Kanamori, L. Kantorovich, L. Knopoff, F. Press, D. Turcotte, and others, published their research articles in VS. Twenty-one volumes of the journal were translated and published by Allerton Press, USA. Since 1994 AGU agreed to publish selected and peer-reviewed articles in volumes entitled CSG. Volume 1 (159 pp.) 1994 selected articles from Volumes 22 & 23 Volume 2 (188 pp.) 1994 selected articles from Volumes 24 & 25 Volume 3 (236 pp.) 1996 selected articles from Volumes 26 & 27 Volume 4 (200 pp.) 1999 selected articles from Volumes 28 & 29 Volume 5 (132 pp.) 2003 selected articles from Volume 30 Volume 6 (102 pp.) 2004 selected articles from Volume 31 Volume 7 (250 pp.) 2005 selected articles from Volume 32 Volume 8 (186 pp.) 2008 selected articles from Volumes 33 & 34*

**Economics: Private and Public Choice** is an aid for students and general readers to develop a sound economic reasoning. The book discusses several ways to economic thinking including six guideposts as follows: (i) scarce goods have costs; (ii) Decision-makers economize in their choices; (iii) Incentives are important; (iv) Decision-makers are dependent on information scarcity; (v) Economic actions can have secondary effects; and (vi) Economic thinking is scientific. The book explains the Keynesian view of money, employment, and inflation, as well as the monetarist view on the proper macropolicy, business cycle, and inflation. The book also discusses consumer decision making, the elasticity of demand, and how income influences demand. The text analyzes costs and producer decisions, the firm under pure competition, and how a competitive model functions. The book explains monopoly, and also considers the high barriers that prevent entry such as legal barriers, economies of scale, and control over important resources. The author also presents comparative economic systems such as capitalism and socialism. This book can prove useful for students and professors in economics, as well as general readers whose works are related to public service and planning in the area of economic development.

The evolving field of emergency medical services (EMS) requires professional educators who are knowledgeable about teaching and learning strategies, classroom management, assessment and evaluation, technology in learning, legal implications in education, program infrastructure design, and administering programs of excellence to meet state and national accreditation guidelines. **Foundations of Education: An EMS Approach, Third Edition**, provides EMS educators with the tools, ideas, and information necessary to succeed in each of these areas. The content reflects how current educational knowledge and theory uniquely apply to EMS students, educators, and programs. This textbook is used in the NAEMSE Instructor Courses, and is an excellent reference for all EMS educators, as well as educators in allied health professions. **Evidence-Based Content** In addition to foundational topics such as teaching philosophy and classroom management, the text covers brain-based learning, accreditation and program evaluation, emerging technologies, and assessment strategies. It guides educators to write objectives, prepare lesson plans, and deliver education in engaging ways to maximize student learning. Grounded in this information, EMS educators can promote effective education regardless of the type of course or setting. **Highlights** -Covers current educational theory and teaching methodologies specific to EMS -Meets and exceeds the latest DOT National Guidelines for Educating EMS

**Instructors -Offer practical advice and scenarios in the form of Teaching Tips and Case in Points**

The search for a means to an end to apartheid erupts into conflict between a black township youth and his "old-fashioned" black teacher. In the current educational environment, there has been a shift towards online learning as a replacement for the traditional in-person classroom experience. With this new environment comes new technologies, benefits, and challenges for providing courses to students through an entirely digital environment. With this shift comes the necessary research on how to utilize these online courses and how to develop effective online educational materials that fit student needs and encourage student learning, motivation, and success. The optimization of these online tools requires a deeper look into curriculum, instructional design, teaching techniques, and new models for student assessment and evaluation. Information on how to create valuable online course content, engaging lesson plans for the digital and meaningful student activities online are only a few of many current topics of interest for promoting student achievement through learning. The Research Anthology on Developing Effective Online Learning Courses provides multiple perspectives on how to develop engaging and effective online learning courses in the wake of the rapid digitalization of education. This book includes topics focused on learners, online course content, effective online instruction strategies, and instructional design for the online environment. This reference is ideal for curriculum developers, instructional designers, IT consultants, deans, chairs, teachers, administrators, academicians, researchers, and students interested in the latest research on how to create online learning courses that promote student success.

**This note conducts a business cycle accounting analysis for systemic economies, with an emphasis on spillover effects from macroeconomic versus financial shocks. The systemic economies under consideration are China, the Euro Area, Japan, the United Kingdom, and the United States. This analysis is based on historical decompositions of output growth derived from the estimated structural macroeconometric model of the world economy, disaggregated into thirty five national economies, documented in Vitek (2012). Within this framework, each economy is represented by interconnected real, external, monetary, fiscal, and financial sectors. Spillovers are**

transmitted across economies via trade, financial, and commodity price linkages  
When facilitating high-quality education, using digital technology to personalize students' learning is a focus in the development of instruction. There is a need to unify the multifaceted directions in personalized learning by presenting a coherent and organized vision in the design of personalized learning using digital technology. Digital Technologies and Instructional Design for Personalized Learning is a critical scholarly resource that highlights the theories, principles, and learning strategies in personalized learning with digital technology. Featuring coverage on a broad range of topics, such as collaborative learning, instructional design, and computer-supported collaborative learning, this book is geared towards educators, professionals, school administrators, academicians, researchers, and students seeking current research on the area of personalized learning with digital technology.
