Stars and Star Systems

Elementary School Science Bulletin

The Natural Classroom

This publication introduces the Diagnose-and-Supplement System of Basic Skills (DASOBS), an online-offline system for academically low-achievement students from grades 1 to 10 in the Republic of Korea. It outlines the purpose, features, and history of DASOBS and describes the operations of the system. DASOBS, which involves form-based adaptive testing, is administered four times a year, with supplemental materials provided so that students can study subjects and lessons according to their achievement levels. This publication also presents policy in the education sector. It will be useful for policymakers, educators, and other stakeholders, especially those seeking to increase targeted support for academically underachieving students.

Volume 2 Case Studies of U.S. Innovations in Science Education

Hearings, Ninety-second Congress, First Session, on H.R. 4743 (superseded by H.R. 7960).

The 4th European Regional Meeting in Astronomy, entitled "Stars and Star Systems", was held in Uppsala, Sweden, on August 7 -12, 1978. It was attended by 228 participants from 24 countries. Over 100 papers were presented; this required parallel sessions throughout the Meeting. Financial support was given by the IAU, the Swedish Department of Education, the Swedish Natural Science Research Council, the Swedish Institute and the University of Uppsala. The members of the Scientific and Local Organizing Committees are listed below, and I thank all of them for their contributions to the Meeting. The Meeting was divided into six sections, according to the scientific topics: Galaxies (A) - including galactic structure and star formation; High-Energy Astrophysics (B); Stars (C); Interstellar Processes (D); Astronomical Instrumentation (E) and Education in Astronomy (F). In each section a number of Invited Papers were presented as well as a large number of contributed papers. In addition, each day a General Lecture was given by an Invited Speaker. The present volume contains all the General Lectures and all the Invited Papers presented during the Meeting. In three cases, however, and for various reasons, only brief summaries have been available. Abstracts of the contributed papers may be found in Uppsala Astronomical Observatory, Report No. 12.

Bold Ventures

The Connecticut School Journal

U.S. Dept. of Energy, Office of Scientific and Technical Information

Proceedings of the Fourth European Regional Meeting in Astronomy Held in Uppsala, Sweden, 7-12 August, 1978

This book presents comprehensive results from case studies of five innovations in science education that have much to offer toward understanding current reforms in this field. Each chapter tells the story of a case in rich detail, with extensive documentation, and in the voices of many of the participants-the innovators, the teachers, the students. Similarly, Volume 3 of Bold Ventures presents the results from case studies of five innovations in mathematics education. Volume 1 provides a cross-case analysis of all eight innovations. Many U.S. readers certainly will be very familiar with the name of at least one if not all of the science innovations discussed in this volume-for example, Project 2061-and probably with their general substance. Much of the education community's familiarity with these arises from the projects' own dissemination efforts. The research reported in this volume, however, is one of the few detailed studies of these innovations undertaken by researchers outside the projects themselves. Each of the five studies was a large-scale effort involving teams of researchers over three years. These teams analyzed many documents, attended numerous critical project meetings, visited multiple sites, conducted dozens of individual interviews. The team leaders (Atkin, Huberman, Rowe), having spent much time with science education over long careers, looked at these innovations through many lenses. It was a daunting task for each team to sift through the mountains of detail in order to bring the most compelling themes to the surface.
